About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

MICROGRIDS –

Part 3-1: Technical requirements – Protection and dynamic control

AMENDMENT 1

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> [and/or] www.iso.org/patents. IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to IEC 62898-3-1:2020 has been prepared subcommittee 8B: Decentralized electrical energy systems, of IEC technical committee 8: System aspects of electrical energy supply.

The text of this Amendment is based on the following documents:

Draft	Report on voting
8B/174/DTS	8B/199/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Amendment is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications/.

A list of all parts in the IEC 62898 series, published under the general title *Microgrids*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

3 Terms and definitions

Add, after 3.4, the following new Definition 3.4.1:

3.4.1 renewable energy sources RES

distributed energy resources whose primary energy source is constantly replenished and will not become depleted

Note 1 to entry: Examples of renewable energy are: wind, solar, geothermal, hydropower.

Note 2 to entry: Fossil fuels are non-renewable.

6 Dynamic stability and control

6.2.3.2 Frequency stability

Replace, in the fourth sentence, "primary" with "local".

6.3.3.1 Major control elements in microgrid

Replace the existing second paragraph with the following:

Microgrids may include, but are not limited to, the following elements that can be involved in the dynamic control of the microgrids (see Figure 2).

Replace the existing Figure 2 with the following:

6.3.3.2 Intermittent RES units

Add, in the first sentence, "are" between "cases" and "the dominant sources".

Replace, in the penultimate sentence, "source inverters" with "source converters".

6.3.3.4 Energy storage systems

Add, in the title and in the three occurrences in the paragraph, "electrical" before "energy storage systems".

6.3.3.5 Dispatchable loads

Delete Footnote 1.

6.3.4.1 Control system hierarchy

Replace the first sentence with the following:

Control of a microgrid can be divided into three layers as shown in the functional mapping for operation and control of microgrids (Figure 3).

Replace the existing Figure 3 and its title with the following:

Figure 3 – Functional mapping for operation and control of microgrids

Replace the existing second paragraph with the following:

Control systems of microgrids, especially those with a sufficiently high number of components, involve a hierarchy of control functions including local and central controls. Local control includes fundamental control hardware for internal voltage and current control loops of the DER. The central control is intended to compensate for deviations in the system-level voltage and frequency which are caused by the local controls, through which voltage and frequency stability can be ensured. Higher level controls, such as for optimal operation (for optimization of parameters such as cost, power loss, emission, etc.) and for power exchange with the grid, generally operate over longer times and are handled by the higher-level control. Detailed requirements for this control level and its functions are provided in IEC TS 62898-3-2¹.

Replace Footnote 2 with Footnote 1.

Replace the existing Figure 4 with the following:

Figure 4 – Typical multilevel control of microgrids

Delete, in the paragraph following Figure 4, "centralized" in the first sentence and replace, in the fourth sentence, "secondary" with "central".

6.3.4.2 Primary control

Replace, in the title, "Primary" with "Local".

Replace, in the first sentence, "Primary" with "Local".

Replace the third sentence with "Control functions such as output control, load sharing, islanding detection and plug and play of DGs are achieved through such control."

Replace, in the second paragraph, "primary" with "local" and replace the last sentence with the following: "Different types of CBGs employ different control methods."

Replace, in item a), "The primary control in grid-forming CBGs is intended" with "Grid-forming CBGs are intended".

Delete, in the last line of item a), the term "primary".

Delete, in the last line of item b), the term "primary".

Delete, in the third sentence of item c), the term "primary".

Replace, in the paragraph following item c), "primary" with "local".

Add, in the first sentence of the last paragraph, ", such as hysteresis," after "improved versions".

Replace, in the last sentence of the last paragraph, "primary" with "local".

6.3.4.3 Secondary controls

Replace, in the title, "Secondary" with "Central".

Replace the existing first sentence of the first paragraph with the following: "Central controls are the second layer control in a hierarchical control of the microgrid."

Replace, in the second sentence, "primary" with "local".

Replace, in the third sentence of the first paragraph, "Secondary" with "This" and replace "primary" with "local".

Replace, in the last sentence of the first paragraph, "primary" with "local".

Replace, in the second sentence of the second paragraph, "primary" with "local".

Replace, in the paragraph preceding item a), "Secondary" with "Central".

Replace, in the paragraph after item c), "Secondary" with "Central".

6.3.6 Control of microgrids during island mode

Add, in item 3), "Electrical" before "Energy storage systems".

Annex A – Use cases for dynamic control of microgrids

Replace the existing Figure A.3 with the following:

Figure A.3 – Voltage profile during field testing of transient disturbance with and without transient control device

Replace the existing Figure A.4 with the following:

Figure A.4 – Current profile during field testing of transient disturbance with and without transient control device

Replace the existing Figure A.6 with the following:
