Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

This third edition cancels and replaces the second edition (ISO/IEC 23005-2:2013), which has been technically revised.

ISO/IEC 23005 consists of the following parts, under the general title *Information technology — Media context and control*:

- *Part 1: Architecture*
- *Part 2: Control information*
- *Part 3: Sensory information*
- *Part 4: Virtual world object characteristics*
- *Part 5: Data formats for interaction devices*
- *Part 6: Common types and tools*
- *Part 7: Conformance and reference software*

Introduction

This International Standard (MPEG-V) provides an architecture and specifies associated information representations to enable interoperability between virtual worlds, e.g. digital content provider of a virtual world, gaming (serious), simulation, DVD, and the real world, e.g. sensors, actuators, vision and rendering, robotics (e.g. for revalidation), (support for) independent living, social and welfare systems, banking, insurance, travel, real estate, rights management, and many others.

Virtual worlds (often referred to as 3D3C for 3D visualization and navigation and the 3Cs of Community, Creation and Commerce) integrate existing and emerging media technologies (e.g. instant messaging, video, 3D, VR, AI, chat, voice, etc.) that allow for the support of existing and the development of new kinds of social networks. The emergence of virtual worlds as platforms for social networking is recognized by businesses as an important issue for at least two reasons.

- 1) It offers the power to reshape the way companies interact with their environments (markets, customers, suppliers, creators, stakeholders, etc.) in a fashion comparable to the Internet.
- 2) It allows for the development of new (breakthrough) business models, services, applications and devices.

Each virtual world, however, has a different culture and audience making use of these specific worlds for a variety of reasons. These differences in existing metaverses permit users to have unique experiences. Resistance to real-world commercial encroachment still exists in many virtual worlds, where users primarily seek an escape from real life. Hence, marketers should get to know a virtual world beforehand and the rules that govern each individual universe.

Although realistic experiences have been achieved via devices such as 3D audio/visual devices, it is hard to realize sensory effects only with presentation of audiovisual contents. The addition of sensory effects leads to even more realistic experiences in the consumption of audiovisual contents. This will lead to the application of new media for enhanced experiences of users in a more realistic sense.

Such new media will benefit from the standardization of control and sensory information which consists of sensory effect metadata, sensory device capabilities/commands, user sensory preferences, and various delivery formats. The MPEG-V architecture can be applicable for various business models for which audiovisual contents can be associated with sensory effects that need to be rendered on appropriate sensory devices.

This part of ISO/IEC 23005 contains the tools of the control information for the media. It addresses the normative aspects of the control information including device capability description, user preference information, and also illustrates some non-normative examples.

The International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) draw attention to the fact that it is claimed that compliance with this document may involve the use of patents.

ISO and the IEC take no position concerning the evidence, validity and scope of these patent rights.

The holders of these patent rights have assured ISO and the IEC that they are willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with ISO and the IEC. Information may be obtained from the companies listed in Annex B.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified in Annex B. ISO and the IEC shall not be held responsible for identifying any or all such patent rights.

Information technology — Media context and control —

Part 2:

Control information

1 Scope

This part of ISO/IEC 23005 specifies syntax and semantics of the tools required to provide interoperability in controlling devices in real as well as virtual worlds. In Figure 1, the scope of this part of ISO/IEC 23005 with tools defined in this part of ISO/IEC 23005 is shown. The adaptation engine (RV or VR engine), which is not within the scope of standardization, takes six inputs [sensory effects (SE), user's sensory effect preferences (USEP), sensory devices capabilities (SDC), sensor capability (SC), sensor adaptation preferences (SAP), and sensed information (SI)] and outputs sensory devices commands (SDCmd) and/or sensed information (SI) to control the devices in real world or virtual world objects. It is applicable to the interfaces between the adaptation engine and the capability descriptions of actuators/sensors in the real world, the user's sensory preference information, which characterize devices and users, and the sensor adaptation preferences information, which characterize sensors and users, so that appropriate information to control devices (actuators and sensors) can be generated. In other words, user's sensory preferences, sensory device capabilities, sensor adaptation preferences, and sensor capabilities are within the scope of this part of ISO/IEC 23005.

Figure 1 — Scope of the control information

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 15938-5:2003, *Information technology — Multimedia content description interface — Part 5: Multimedia description schemes*

ISO/IEC 21000-7, *Information technology — Multimedia framework (MPEG-21) — Part 7: Digital Item Adaptation*

ISO/IEC 23005-6:2016, *Information technology — Media context and control — Part 6: Common types and tools*

3 Terms, definitions, abbreviated terms and prefixes

For the purposes of this document, the terms and definitions given in ISO/IEC 23005-6 apply.

3.1 Abbreviated terms

For the purposes of this document, the following abbreviated terms apply.

DIA	digital item adaptation (see ISO/IEC 21000-7)
MPEG-21	multimedia framework (ISO/IEC 21000-5)
CIDL	control information description language
DCDV	device capability description vocabulary
SCDV	sensor capability description vocabulary
SEPV	sensory effect preference vocabulary
SAPV	sensor adaptation preference vocabulary
XML	extensible mark-up language

3.2 Use of prefixes

For clarity, throughout this part of ISO/IEC 23005, consistent namespace prefixes are used.

“xsi:” prefix is not normative. It is a naming convention in this part of ISO/IEC 23005 to refer to an element of the <http://www.w3.org/2001/XMLSchema-instance> namespace.

“xml:” and “xmlns:” are normative prefixes defined in Reference [1]. The prefix “xml:” is by definition bound to “<http://www.w3.org/XML/1998/namespace>”. The prefix “xmlns:” is used only for namespace bindings and is not itself bound to any namespace name.

All other prefixes used in either the text or examples of this specification are not normative, e.g. “sedl:”, “sev:”, “dia:”, “si:”, “mpeg7:”.

In particular, most of the informative examples in this specification are provided as XML fragments without the normally required XML document declaration and, thus, miss a correct namespace binding context declaration. In these descriptions fragments, the different prefixes are bound to the namespaces as given in Table 1.

Table 1 — Mapping of prefixes to namespaces in examples and text

Prefix	Corresponding namespace
ct	urn:mpeg:mpeg-v:2016:01-CT-NS
sedl	urn:mpeg:mpeg-v:2016:01-SEDl-NS
sev	urn:mpeg:mpeg-v:2016:01-SEV-NS
dia	urn:mpeg:mpeg21:2003:01-DIA-NS
si	urn:mpeg:mpeg21:2003:01-DIA-XSI-NS
mpeg7	urn:mpeg:mpeg7:schema:2004
xsi	http://www.w3.org/2001/XMLSchema-instance
xsd	http://www.w3.org/2001/XMLSchema

4 Control information description language

4.1 General

This Clause describes basic structure of the tools in this part of ISO/IEC 23005 in the form of control information description language including the schema wrapper conventions, basic data types, root element, and top-level elements.

4.2 Schema wrapper conventions

The syntax defined in this part of ISO/IEC 23005 assumes the following schema wrapper to form a valid XML schema document.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema"
xmlns:mpeg7="urn:mpeg:mpeg7:schema:2004" xmlns:dia="urn:mpeg:mpeg21:2003:01-DIA-
NS" xmlns:mpegvct="urn:mpeg:mpeg-v:2016:01-CT-NS" xmlns:cidl="urn:mpeg:mpeg-
v:2016:01-CIDL-NS" xmlns:dcdv="urn:mpeg:mpeg-v:2016:01-DCDV-NS"
xmlns:scdv="urn:mpeg:mpeg-v:2016:01-SCDV-NS" xmlns:sepv="urn:mpeg:mpeg-v:2016:01-
SEPV-NS" xmlns:sapv="urn:mpeg:mpeg-v:2016:01-SAPV-NS"
targetNamespace="urn:mpeg:mpeg-v:2016:01-CIDL-NS" elementFormDefault="qualified"
attributeFormDefault="unqualified" version="ISO/IEC 23005-2" id="MPEG-V-
CIDL.xsd">
  <import namespace="urn:mpeg:mpeg7:schema:2004"
schemaLocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
7_schema_files/mpeg7-v2.xsd"/>
  <import namespace="urn:mpeg:mpeg21:2003:01-DIA-NS"
schemaLocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
21_schema_files/dia-2nd/UED-2nd.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-CT-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-CT.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-DCDV-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-DCDV.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-SCDV-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-SCDV.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-SEPV-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-SEPV.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-SAPV-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-SAPV.xsd"/>
```

Additionally, the following line should be appended to the resulting schema document in order to obtain a well-formed XML document.

```
</schema>
```

4.3 Mnemonics for binary representations

The mnemonics are defined in ISO/IEC 23005-6:—, 4.3.

4.4 Common header for binary representations

The common header is defined in ISO/IEC 23005-6:—, 4.4.

4.5 Root element and top-level tools

4.5.1 General

This subclause specifies the root element and the top-level tools which can follow root element in control information. The root element is the only element which can appear as the topmost element when the control information specified in this part of ISO/IEC 23005 is instantiated. The top-level tools are defined as the elements which are allowed to appear as the topmost element within the root element.

4.5.2 XML representation syntax

```
<!-- ##### -->
<!-- Root Element -->
<!-- ##### -->
<element name="ControlInfo" type="cidl:ControlInfoType"/>

<complexType name="ControlInfoType">
  <sequence>
    <element name="SensoryDeviceCapabilityList"
      type="cidl:SensoryDeviceCapabilityListType" minOccurs="0"/>
    <element name="SensorDeviceCapabilityList"
      type="cidl:SensorDeviceCapabilityListType" minOccurs="0"/>
    <element name="UserSensoryPreferenceList"
      type="cidl:UserSensoryPreferenceListType" minOccurs="0"/>
    <element name="SensorAdaptationPreferenceList"
      type="cidl:SensorAdaptationPreferenceListType" minOccurs="0"/>
  </sequence>
</complexType>

<complexType name="SensoryDeviceCapabilityListType">
  <sequence>
    <element name="SensoryDeviceCapability"

  </sequence>
</complexType>

<complexType name="SensorDeviceCapabilityListType">
  <sequence>
    <element name="SensorDeviceCapability"
      type="cidl:SensorDeviceCapabilityBaseType" maxOccurs="unbounded"/>
  </sequence>
</complexType>

<complexType name="UserSensoryPreferenceListType">
  <sequence>
    <element name="USPreference" type="cidl:UserSensoryPreferenceBaseType"
      maxOccurs="unbounded"/>
  </sequence>
</complexType>

<complexType name="SensorAdaptationPreferenceListType">
  <sequence>
    <element name="SAPreference"
      type="cidl:SensorAdaptationPreferenceBaseType" maxOccurs="unbounded"/>
  </sequence>
</complexType>
```

4.5.3 Binary representation syntax

ControllInfoType{	Number of bits	Mnemonic
SensoryDeviceCapabilityListFlag	1	bslbf
SensorDeviceCapabilityListFlag	1	bslbf
UserSensoryPreferenceListFlag	1	bslbf
SensorAdaptationPreferenceListFlag	1	bslbf
if (SensoryDeviceCapabilityListFlag) {		
SensoryDeviceCapabilityList		SensoryDeviceCapabilityListType
}		
if (SensorDeviceCapabilityListFlag) {		
SensorDeviceCapabilityList		SensorDeviceCapabilityListType
}		
if (UserSensoryPreferenceListFlag) {		
UserSensoryPreferenceList		UserSensoryPreferenceListType
}		
if (SensorAdaptationPreferenceListFlag) {		
SensorAdaptationPreferenceList		SensorAdaptationPreferenceListType
}		
}		
SensoryDeviceCapabilityListType {		
NumOfSensoryDevCap	32	uimsbf
for(i=1;i<NumOfSensoryDevCap;i++){		
IndividualSensoryDevCapType	8	bslbf
SensoryDeviceCapability		SensoryDeviceCapabilityType specified by IndividualSensoryDevCapType
}		
}		
SensorDeviceCapabilityListType {		

ControlInfoType{	Number of bits	Mnemonic
NumOfSensorCap	32	uimsbf
for(i=1;i<NumOfSensorCap;i++){		
IndividualSensorCapType	8	bslbf
SensorCapability		SensorCapabilityType specified by IndividualSensorCapType
}		
}		
UserSensoryPreferenceListType {		
NumOfUserSensoryPref	32	uimsbf
for(i=1;i<NumOfUserSensoryPref;i++){		
IndividualUserSensoryPrefType	8	bslbf

}		
}		
SensorAdaptationPreferenceListType {		
NumOfSensorAdaptationPref	32	uimsbf
for(i=1;i< NumOfSensorAdaptationPref;i++){		
IndividualSensorAdaptationPrefType	8	bslbf
SAPreference		SAPreferenceType specified by IndividualSensorAdaptationPrefType
}		
}		

4.5.4 Semantics

Semantics of the `ControlInfo` type:

Name	Definition
ControlInfo	The root element that serves as the topmost element in the control information description.
SensoryDeviceCapabilityListFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
SensorDeviceCapabilityListFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
UserSensoryPreferenceListFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
SensorAdaptationPreferenceListFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
ControlInfoType	The root type provides basic structure that the control information description should follow through the root element. This field, which is present in the binary representation, indicates the type of the ControlInfo element. There should be used at least one element among ControlInfoType.
SensoryDeviceCapabilityList	Optional wrapper element that serves as the placeholder for the list of sensory device capability descriptions.
SensorDeviceCapabilityList	Optional wrapper element that serves as the placeholder for the list of sensor device capability descriptions.
UserSensoryPreferenceList	Optional wrapper element that serves as the placeholder for the list of device user preference descriptions.
SensorAdaptationPreferenceList	Optional wrapper element that serves as the placeholder for the list of sensor device adaptation preference descriptions.
SensoryDeviceCapabilityListType	Wrapper element type which allows multiple occurrences of sensory device capability descriptions.
NumOfSensoryDevCap	This field, which is only present in the binary representation, specifies the number of SensoryDeviceCapability instances accommodated in the SensoryDeviceCapabilityList.
IndividualSensoryDevCapType	This field, which is only present in the binary representation, describes which SensoryDeviceCapability type shall be used. In the binary description, the following mapping table is used.

Name	Definition

4.6 Sensory device capability description

4.6.1 General

This subclause specifies tools for describing device capabilities of sensory devices. The following subclause defines an abstract complex type of `SensoryDeviceCapabilityBaseType`, which the device capability description of individual sensory device should inherit.

4.6.2 Reference coordinate system

The origin of the reference coordinate for sensory devices is located at the position of the user. Each axis is defined as follows. X-axis is in the direction of the right hand side of the user facing the screen. Y-axis is in the reverse direction of gravity. Z-axis is in the direction of the user's facing the screen. The x-, y-, and z-axis are depicted in Figure 2.

Figure 2 — Reference coordinate system for sensory devices

4.6.3 Sensory device capability base type

4.6.3.1 XML representation syntax

```
<complexType name="SensoryDeviceCapabilityBaseType" abstract="true">
  <complexContent>
    <extension base="dia:TerminalCapabilityBaseType">
      <attributeGroup ref="cidl:sensoryDeviceCapabilityAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

4.6.3.2 Binary representation syntax

SensoryDeviceCapabilityBaseType{	Number of bits	Mnemonic
TerminalCapabilityBase		TerminalCapabilityBaseType
sensoryDeviceCapabilityAttributes		sensoryDeviceCapabilityAttributesType
}		

4.6.3.3 Semantics

Semantics of the SensoryDeviceCapabilityBaseType type:

Name	Definition
SensoryDeviceCapabilityBaseType	SensoryDeviceCapabilityBaseType shall extend dia:TerminalCapabilityBaseType as defined in ISO/IEC 21000-7 and provides a base abstract type for a subset of types defined as part of the sensory device capability metadata types.
sensoryDeviceCapabilityAttributes	Describes a group of attributes for the device capabilities.

4.6.4 Sensory device capability base attributes

4.6.4.1 XML representation syntax

```
<attributeGroup name="sensoryDeviceCapabilityAttributes">
  <attribute name="zerothOrderDelayTime" type="nonNegativeInteger"
    use="optional"/>
  <attribute name="firstOrderDelayTime" type="nonNegativeInteger"
    use="optional"/>
  <attribute name="locator" type="mpeg7:termReferenceType" use="optional"/>
</attributeGroup>
```

4.6.4.2 Binary representation syntax

sensoryDeviceCapabilityAttributes {	Number of bits	Mnemonic
zerothOrderDelayTimeFlag	1	bslbf
firstOrderDelayTimeFlag	1	bslbf

locatorFlag	1	bslbf
if(zerothOrderDelayTimeFlag){		
zerothOrderDelayTime	16	uimsbf
}		
if(firstOrderDelayTimeFlag){		
firstOrderDelayTime	16	uimsbf
}		
if(locatorFlag){		
locator	7	bslbf
}		
}		

4.6.4.3 Semantics

Semantics of the `sensoryDeviceCapabilityAttributes` type:

Name	Definition
<code>sensoryDeviceCapabilityAttributes</code>	Describes a group of attributes for the sensory device capabilities.
<code>zerothOrderDelayTimeFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>firstOrderDelayTimeFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>locatorFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>zerothOrderDelayTime</code>	Describes required preparation time of a sensory device to be activated since it receives a command in the unit of millisecond (ms).
<code>firstOrderDelayTime</code>	Describes the delay time for a device to reach the target intensity since it receives a command and is activated in the unit of millisecond (ms).
<code>locator</code>	Describes the position of the device from the user’s perspective according to the x-, y-, and z-axis as a reference to the <code>LocationCS</code> as defined in ISO/IEC 23005-6:—, A.2.3.

4.6.4.4 Examples

The following example shows a use of `sensoryDeviceCapabilityAttributes`, which describes that a sensory device, specified by the identifier value of `ldc1`, of “`specific_sensory_device_capability_type`” requires preparation time of 0 ms to start, and 1 ms to reach target intensity, and is located at the left side according to the position model defined in ISO/IEC 23005-6:—, A.2.3.

```
<cid1:SensoryDeviceCapability
xsi:type="dcdv:specific_sensory_device_capability_type" firstOrderDelayTime="0"
zerothOrderDelayTime="1" id="ldc1" locator="urn:mpeg:mpeg-v:01-SI-LocationCS-
NS:left"/>
```

4.7 Sensor capability description

4.7.1 General

This subclause specifies tools for describing sensor capability of individual sensors. The following subclause defines the global coordinate for sensors which depends on the real world environment of user to determine the location of the sensors. An abstract complex type of `SensorCapabilityBaseType`, which the sensor capability description of individual device should inherit, is defined in the following subclause.

4.7.2 Global coordinate for sensors

Figure 3 — Global coordinate for sensors

The origin of the global coordinate for sensors is located at the position of the user adapting the right handed coordinate system. Each axis is defined as follows. Y-axis is in the direction of gravity. X-axis is in the direction of the top right corner of the screen. Z-axis is in the opposite direction of the user's position. The x-, y-, and z-axis are depicted in Figure 3.

4.7.3 Sensor capability base type

4.7.3.1 XML representation syntax

```
<complexType name="SensorCapabilityBaseType" abstract="true">
  <complexContent>
    <extension base="dia:TerminalCapabilityBaseType">
      <sequence>
        <element name="Accuracy" type="cid1:AccuracyType" minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

```

        </sequence>
        <attributeGroup ref="cidl:sensorCapabilityBaseAttributes"/>
    </extension>
</complexContent>
</complexType>

<complexType name="AccuracyType" abstract="true"/>

<complexType name="PercentAccuracy">
    <complexContent>
        <extension base="cidl:AccuracyType">
            <attribute name="value" type="mpeg7:zeroToOneType"/>
        </extension>
    </complexContent>
</complexType>

<complexType name="ValueAccuracy">
    <complexContent>
        <extension base="cidl:AccuracyType">
            <attribute name="value" type="float"/>
        </extension>
    </complexContent>
</complexType>

```

4.7.3.2 Binary representation syntax

SensorCapabilityBaseType {	Number of bits	Mnemonic
AccuracyFlag	1	bslbf
TerminalCapabilityBase		TerminalCapabilityBaseType
if(AccuracyFlag){		
Accuracy		AccuracyType
}		
SensorCapabilityBaseAttributes		SensorCapabilityBaseAttributesType
}		
AccuracyType {		
AccuracySelect	2	bslbf
if(AccuracySelect==00){		
PercentAccuracy	32	fsbf
} else if (AccuracySelect==01) {		
ValueAccuracy	32	fsbf
}		
}		

4.7.3.3 Semantics

Semantics of the `SensorCapabilityBaseType`:

Name	Definition
<code>SensorCapabilityBaseType</code>	<code>SensorCapabilityBaseType</code> shall extend <code>dia:TeminalCapabilityBaseType</code> as defined in ISO/IEC 21000-7 and provides a base abstract type for a subset of types defined as part of the sensor device capability metadata types.
<code>AccuracyFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>Accuracy</code>	Describes the degree of closeness of a measured quantity to its actual value in <code>AccuracyType</code> .
<code>sensorCapabilityBaseAttributes</code>	Describes a group of attributes for the sensor capabilities.

Semantics of the `AccuracyType`:

Name	Definition
<code>AccuracyType</code>	Becomes a parent type providing a choice of describing the accuracy in either relative value or absolute value.
<code>AccuracySelect</code>	This field, which is only present in the binary representation, describes which accuracy scheme shall be used. "0" means that the <code>PercentAccuracy</code> type shall be used, and "1" means that the <code>ValueAccuracy</code> type shall be used.
<code>PercentAccuracy</code>	Describes the degree of closeness of a measured quantity to its actual value in a relative way using a value ranging from 0 to 1,0.
value	Provides an actual value in a relative way for accuracy where value 0 means 0 % accuracy and value 1,0 means 100 % accuracy. It shall be a <code>zeroToOneType</code> type as defined in ISO/IEC 15938-5.
<code>ValueAccuracy</code>	Describes the degree of closeness of a measured quantity to its actual value in an absolute value of given unit.
value	Provides an actual value in an absolute way, where the value means the possible range of error as (-value, +value) of given unit.

4.7.3.4 Examples

For examples of using `SensorCapabilityBaseType`, see the examples provided by the individual sensor device capability types.

4.7.4 Sensor capability base attributes

4.7.4.1 XML representation syntax

```
<attributeGroup name="sensorCapabilityBaseAttributes">
  <attribute name="unit" type="mpegvct:unitType" use="optional"/>
  <attribute name="maxValue" type="float" use="optional"/>
  <attribute name="minValue" type="float" use="optional"/>
  <attribute name="offset" type="float" use="optional"/>
  <attribute name="numOfLevels" type="nonNegativeInteger" use="optional"/>
  <attribute name="sensitivity" type="float" use="optional"/>
  <attribute name="SNR" type="float" use="optional"/>
</attributeGroup>
```

4.7.4.2 Binary representation syntax

SensorCapabilityBaseAttributesType {	Number of bits	Mnemonic
unitFlag	1	bslbf
maxValueFlag	1	bslbf
minValueFlag	1	bslbf
offsetFlag	1	bslbf
numOfLevelsFlag	1	bslbf
sensitivityFlag	1	bslbf
SNRFlag	1	bslbf
if(unitFlag){		
unit	8	bslbf
}		
if(maxValueFlag){		
maxValue	32	fsbf
}		
if(minValueFlag){		
minValue	32	fsbf
}		
if(offsetFlag){		
offset	32	fsbf
}		

SensorCapabilityBaseAttributesType {	Number of bits	Mnemonic
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
if(sensitivityFlag){		
sensitivity	32	fsbf
}		
if(SNRFlag){		
SNR	32	fsbf
}		
}		

4.7.4.3 Semantics

Semantics of the SensorCapabilityBaseAttributes:

Name	Definition
sensorCapabilityBaseAttributes	Describes a group of attributes for the sensor capabilities.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValueFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
minValueFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
offsetFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
numOfLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
sensitivityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
SNRFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall

Name	Definition
	be used and "0" means the attribute shall not be used.
unit	Describes the unit of the sensor's measuring value. Specifies the unit of the sensor's measuring value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxValue</code> and <code>minValue</code> is used for the values of <code>maxValue</code> and <code>minValue</code> are used.
maxValue	Describes the maximum value that the sensor can perceive. The terms will be different according to the individual sensor type.
minValue	Describes the minimum value that the sensor can perceive. The terms will be different according to the individual sensor type.
offset	Describes the number of value locations added to a base value in order to get to a specific absolute value.
numOfLevels	Describes the number of value levels that the sensor can perceive in between maximum and minimum value. EXAMPLE The value 5 means the sensor can perceive 5 steps from <code>minValue</code> to <code>maxValue</code> .
sensitivity	Describes the minimum magnitude of input signal required to produce a specified output signal in given unit.
SNR	Describes the ratio of a signal power to the noise power corrupting the signal.

4.7.4.4 Examples

The following example shows a use of `SensorCapabilityBaseAttributes`. It shows that an arbitrary sensor device of type `any_specific_sensor_device_capability_type` has an ID of "ans01" with `maxValue` of 100, `minValue` of 10, 20 levels, offset of -3, sensitivity of 0.8, and SNR of 99 dB. It also shows that the measuring unit of the specified sensor device is dB.

```
<cidl:SensorDeviceCapability
xsi:type="scdv:any_specific_sensor_device_capability_type" id="ans01"
maxValue="100" minValue="10" numOfLevels="20" offset="-3" sensitivity="0.8"
SNR="99" unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:dB"/>
```

4.8 User's sensory preference description

4.8.1 General

This subclause specifies tools for describing preferences of individual users regarding the sensory experience. The following subclauses define an abstract complex type of `UserSensoryPreferenceBaseType`, which the user preferences on each individual type of sensory experience should inherit.

4.8.2 User sensory preference base type

4.8.2.1 XML representation syntax

```
<complexType name="UserSensoryPreferenceBaseType" abstract="true">
  <complexContent>
    <extension base="dia:UserCharacteristicBaseType">
      <attributeGroup ref="cidl:userSensoryPrefBaseAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

4.8.2.2 Binary representation syntax

UserSensoryPreferenceBaseType {	Number of bits	Mnemonic
UserCharacteristicBase		UserCharacteristicBaseType
userSensoryPrefBaseAttributes		userSensoryPrefBaseAttributesType
}		

4.8.2.3 Semantics

Semantics of the UserSensoryPreferenceBaseType type:

Name	Definition
UserSensoryPreferenceBaseType	UserSensoryPreferenceBaseType shall extend dia:UserCharacteristicBaseType as defined in ISO/IEC 21000-7 and provides a base abstract type for a subset of types defined as part of the sensory device capability metadata types.
userSensoryPrefBaseAttributes	Describes a group of common attributes for the describing user preferences on sensory experience.

4.8.2.4 Examples

For the examples of UserSensoryPreferenceBaseType, see the examples of preferences on individual sensory effect type.

4.8.3 User sensory preference base attributes

4.8.3.1 XML representation syntax

```
<attributeGroup name="userSensoryPrefBaseAttributes">
  <attribute name="adaptationMode" type="cidl:adaptationModeType"
    use="optional"/>
  <attribute name="activate" type="boolean" use="optional"/>
</attributeGroup>

<simpleType name="adaptationModeType">
  <restriction base="string">
```

```

    <enumeration value="strict"/>
    <enumeration value="scalable"/>
  </restriction>
</simpleType>

```

4.8.3.2 Binary representation syntax

userSensoryPrefBaseAttributesType {	Number of bits	Mnemonic
adaptationModeFlag	1	bslbf
activateFlag	1	bslbf
if(adaptationModeFlag){		
adaptationMode		adaptationModeType
}		
if(activateFlag){		
activate	1	bslbf
}		
}		
adaptationModeType {		
adaptationMode	2	bslbf
}		

4.8.3.3 Semantics

Semantics of the `userSensoryPrefBaseAttributes` type:

Name	Definition
<code>userSensoryPrefBaseAttributes</code>	Describes a group of common attributes for the describing user preferences on sensory experience.
<code>adaptationModeFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>activateFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>adaptationMode</code>	Describes the user's preference on the adaptation method for the sensory effect. EXAMPLE The value "strict" means the user prefer to render sensory effect exactly as described. Otherwise, the value "scalable" means to render

Name	Definition								
	sensory effect with scaled intensity according to the device capacity.								
activate	Describes whether the effect shall be activated. A value of <code>true</code> means the effect shall be activated and <code>false</code> means the effect shall be deactivated.								
adaptationModeType	Tool for describing the adaptation mode with enumeration set. When its value is <code>strict</code>, it means that when the input value is out of range, the output should be equal to the maximum value that the device is able to operate. When its value is <code>scalable</code>, it means that the output shall be linearly scaled into the range that the device can operate. In the binary description, the following mapping table is used. <table> <tr> <th>adaptationModeType</th><th>adaptationMode</th></tr> <tr> <td>00</td><td>strict</td></tr> <tr> <td>01</td><td>scalable</td></tr> <tr> <td>10-11</td><td>Reserved</td></tr> </table>	adaptationModeType	adaptationMode	00	strict	01	scalable	10-11	Reserved
adaptationModeType	adaptationMode								
00	strict								
01	scalable								
10-11	Reserved								

4.8.3.4 Examples

For the examples of `userSensoryPrefBaseAttributes`, see the examples of preferences on individual sensory effect type.

4.9 Sensor adaptation preference description

4.9.1 General

This subclause specifies tools for describing preferences of individual users regarding the sensed information. The following subclauses define an abstract complex type of `SensorAdaptationPreferenceBaseType`, which the user preferences on each individual type of sensed information should inherit.

4.9.2 Sensor adaptation preference base type

4.9.2.1 XML representation syntax

```
<complexType name="SensorAdaptationPreferenceBaseType" abstract="true">
  <complexContent>
    <extension base="dia:UserCharacteristicBaseType">
      <attributeGroup ref="cidl:sensorAdaptationPrefBaseAttributes"/>
    </extension>
  </complexContent>
</complexType>
```

4.9.2.2 Binary representation syntax

SensorAdaptationPreferenceBaseType {	Number of bits	Mnemonic
UserCharacteristicBase		UserCharacteristicBaseType

sensorAdaptationPrefBaseAttributes		sensorAdaptationPrefBaseAttributesType
}		

4.9.2.3 Semantics

Semantics of the `SensorAdaptationPreferenceBaseType` type:

Name	Definition
<code>SensorAdaptationPreferenceBaseType</code>	<code>SensorAdaptationPreferenceBaseType</code> shall extend <code>dia:UserCharacteristicBaseType</code> as defined in ISO/IEC 21000-7 and provides a base abstract type for a subset of types defined as part of the sensor capability metadata types.
<code>SensorAdaptationPrefBaseAttributes</code>	Describes a group of common attributes for describing the adaptation preferences on sensed information.

4.9.2.4 Examples

For the examples of `SensorAdaptationPreferenceBaseType`, see the examples of preferences on individual sensor adaptation preference type.

4.9.3 Sensor adaptation preference base attributes

4.9.3.1 XML representation syntax

```
<attributeGroup name="sensorAdaptationPrefBaseAttributes">
  <attribute name="sensorIdRef" type="anyURI" use="optional"/>
  <attribute name="sensorAdaptationMode" type="cidl:sensorAdaptationModeType"
use="optional"/>
  <attribute name="activate" type="boolean" use="optional"/>
  <attribute name="unit" type="mpegvct:unitType" use="optional"/>
  <attribute name="maxValue" type="float" use="optional"/>
  <attribute name="minValue" type="float" use="optional"/>
  <attribute name="numOfLevels" type="nonNegativeInteger" use="optional"/>
</attributeGroup>

<simpleType name="sensorAdaptationModeType">
  <restriction base="string">
    <enumeration value="strict"/>
    <enumeration value="scalable"/>
  </restriction>
</simpleType>
```

4.9.3.2 Binary representation syntax

sensorAdaptationPrefBaseAttributesType {	Number of bits	Mnemonic
sensorIdRefFlag	1	bslbf
sensorAdaptationModeFlag	1	bslbf

sensorAdaptationPrefBaseAttributesType {	Number of bits	Mnemonic

}		
}		
sensorAdaptationModeType {		
sensorAdaptationMode	2	bslbf

sensorAdaptationPrefBaseAttributesType {	Number of bits	Mnemonic
}		

4.9.3.3 Semantics

Semantics of the `SensorAdaptationPrefBaseAttributes` type:

Name	Definition
<code>SensorAdaptationPrefBaseAttributes</code>	Describes a group of common attributes for the describing adaptation preferences on sensed information.
<code>sensorIdRefFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>sensorAdaptationModeFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>activateFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxValueFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>minValueFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>numOfLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>sensorIdRef</code>	Refers to the ID of an individual sensor that has generated the specific sensor adaptation preferences.
<code>sensorAdaptationMode</code>	Describes the user’s preference on the adaptation method for the sensed information. EXAMPLE The value “strict” means the user prefer to transmit sensed information to the virtual world exactly as described. Otherwise, the value “scalable” means to let the virtual world may adjust sensed information with scaled value according to user’s intention.
<code>activate</code>	Describes whether the user allows the sensed information to be used or not. A value of “true” means the sensed information is allowed to use and “false” means the sensed information is not allowed to use.
<code>unit</code>	Describes the unit of value which the user prefers to adapt.

Name	Definition
maxValue	Describes the maximum desirable value of the sensed information according to the maximum scale defined within the semantics definition of the individual sensor.
minValue	Describes the minimum desirable value of the sensed information according to the minimum scale defined within the semantics definition of the individual sensor.
numOfLevelsnumOfLevels	Describes the desirable number of value levels in between maximum and minimum value.
sensorAdaptationModeType	Tool for describing the adaptation mode with enumeration set. When its value is <i>strict</i> , it means that when the input value is out of range, the output should be equal to the maximum value that the device is able to operate. When its value is <i>scalable</i> , it means that the output shall be linearly scaled into the range that the device can operate.

4.9.3.4 Examples

For the examples of `sensorAdaptationPrefBaseAttributes`, see the examples of preferences on individual sensor adaptation preference type.

5 Device capability description vocabulary

5.1 General

This Clause describes syntax and semantics of the device capability description vocabulary, which comprises the following devices:

- light, colored light, flash light device;
- heating, cooling device;
- wind device;
- vibration device;
- scent device;
- fog device;
- sprayer device;
- color correction device;
- tactile device;
- kinesthetic device;
- rigid body motion device;
- mobile device position;
- bubble device.

NOTE DCDV has been designed in an extensible way and additional device capabilities can be added easily.

5.2 Schema wrapper conventions

The syntax defined in this Clause assumes the following schema wrapper to form a valid XML schema document.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema"

5.3 Light capability type

5.3.1 General

This subclause specifies syntax and semantics of lighting capabilities of lighting devices.

5.3.2 XML representation syntax

```
<complexType name="LightCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <sequence>
        <element name="Color" type="mpegvct:colorType" minOccurs="0"
maxOccurs="unbounded"/>
      </sequence>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="maxIntensity" type="nonNegativeInteger"
use="optional"/>
      <attribute name="numOfLightLevels" type="nonNegativeInteger"
use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.3.3 Binary representation syntax

LightCapabilityType {	Number of bits	Mnemonic
-----------------------	----------------	----------

ColorFlag	1	bslbf
unitFlag	1	bslbf
maxIntensityFlag	1	bslbf
numOfLightLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(ColorFlag){		
LoopColor		vuimsbf5
for(k=0;k<LoopColor;k++){		
Color[k]		ColorType
}		
}		
if(unitFlag){		
unit	8	bslbf
}		
if(maxIntensityFlag){		
maxIntensity	32	uimsbf
}		
if(numOfLightLevelsFlag){		
numOfLightLevels	16	uimsbf
}		
}		

5.3.4 Semantics

Semantics of the `LightCapabilityType` type:

Name	Definition
<code>LightCapabilityType</code>	Tool for describing a light capability.
<code>ColorFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.

Name	Definition
maxIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfLightLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
unit	Specifies the unit of the <code>maxIntensity</code> , if a unit other than the default unit is used, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1.
maxIntensity	Describes the maximum intensity that the lighting device can provide in terms of LUX.
numOfLightLevels	Describes the number of intensity levels that the device can provide in between maximum and minimum intensity of light.
LoopColor	This field, which is only present in the binary representation, specifies the number of color contained in the description.
Color	Describes the list of colors which the lighting device can provide as a reference to a classification scheme term or as RGB value. A CS that may be used for this purpose is the <code>ColorCS</code> defined in ISO/IEC 23005-6:—, A.2.2. EXAMPLE <code>urn:mpeg:mpeg-v:01-SI-ColorCS-NS:alice_blue</code> would describe the color Alice blue.

5.3.5 Examples

This example shows the description of a light capability with the following semantics. The light identifier is “light1”. The maximum intensity of the light is 300 lux. There are 10 light levels between maximum and minimum intensity. The location of the light is the right side according to the position model described in ISO/IEC 23005-3:—, Figure 3. The colors that can be displayed by the light are “white”, “red”, “blue”, and “green” from the classification scheme described in ISO/IEC 23005-6:—, A.2.2.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:LightCapabilityType"
id="light1" unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:lux"
maxIntensity="300" numOfLightLevels="10" locator="urn:mpeg:mpeg-v:01-SI-
LocationCS-NS:right">
  <dcdv:Color>
    urn:mpeg:mpeg-v:01-SI-ColorCS-NS:white
  </dcdv:Color>
  <dcdv:Color>
    urn:mpeg:mpeg-v:01-SI-ColorCS-NS:red
  </dcdv:Color>
  <dcdv:Color>
    urn:mpeg:mpeg-v:01-SI-ColorCS-NS:blue
  </dcdv:Color>
  <dcdv:Color>
    urn:mpeg:mpeg-v:01-SI-ColorCS-NS:green_color_wheel_x11_green
  </dcdv:Color>
</cidl:SensoryDeviceCapability>
```

5.4 Flash capability type

5.4.1 General

This subclause specifies syntax and semantics of flash capabilities of lighting devices.

5.4.2 XML representation syntax

```
<complexType name="FlashCapabilityType">
  <complexContent>
    <extension base="dcdv:LightCapabilityType">
      <attribute name="maxFrequency" type="positiveInteger" use="optional"/>
      <attribute name="numOfFreqLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.4.3 Binary representation syntax

FlashCapabilityType {	Number of bits	Mnemonic
maxFrequencyFlag	1	bslbf
numOfFreqLevelsFlag	1	bslbf
LightCapability		LightCapabilityType
if(maxFrequencyFlag){		
maxFrequency	8	uimsbf
}		
if(numOfFreqLevelsFlag){		
numOfFreqLevels	8	uimsbf
}		
}		

5.4.4 Semantics

Semantics of the `FlashCapabilityType` type:

Name	Definition
<code>FlashCapabilityType</code>	Tool for describing a flash capability. It is extended from the light capability type.
<code>maxFrequencyFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
numOfFreqLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
LightCapability	Describes a light capability.
maxFrequency	Describes the maximum number of flickering in times per second. EXAMPLE The value 10 means the device can flicker 10 times for each second.
maxIntensity	Describes the maximum intensity that the flash device can provide in terms of LUX.
unit	Specifies the unit of the maxIntensity, if a unit other than the default unit is used, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1.
numOfFreqLevels	Describes the number of frequency levels that the device can provide in between maximum and minimum frequency.
numOfLightLevels	Describes the number of intensity levels that the device can provide in between maximum and minimum intensity of light.

5.4.5 Examples

This example shows the description of a flash light capability with the following semantics. The flash light identifier is "flash1". The maximum frequency of the flash light is 50 times per second. There are 10 levels between maximum and minimum frequency of the flash light. The location of the flash light is the left side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:FlashCapabilityType" id="flash1"
maxFrequency="50" numOfFreqLevels="10"
unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:lux" maxIntensity="300"
numOfLightLevels="10" locator="urn:mpeg:mpeg-v:01-SI-LocationCS-NS:left"/>
```

5.5 Heating capability type

5.5.1 General

This subclause specifies syntax and semantics of capabilities of heating devices.

5.5.2 XML representation syntax

```
<complexType name="HeatingCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="maxIntensity" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="minIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

```

    </extension>
  </complexContent>
</complexType>

```

5.5.3 Binary representation syntax

HeatingCapabilityType {	Number of bits	Mnemonic
maxIntensityFlag	1	bslbf
minIntensityFlag	1	bslbf
unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(minIntensityFlag){		
minIntensity	8	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.5.4 Semantics

Semantics of the HeatingCapabilityType type:

Name	Definition
HeatingCapabilityType	Tool for describing the capability of a device which can increase the room temperature.
maxIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be

Name	Definition
	used and “0” means the attribute shall not be used.
minIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxIntensity	Describes the highest temperature that the heating device can provide in terms of Celsius (or Fahrenheit).
minIntensity	Describes the lowest temperature that the heating device can provide in terms of Celsius (or Fahrenheit).
unit	Specifies the unit of the intensity, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1 (it shall be a reference to either Celsius or Fahrenheit.) If the unit is not specified, the default unit is Celsius.
numOfLevels	Describes the number of temperature levels that the device can provide in between maximum and minimum temperature.

5.5.5 Examples

This example shows the description of a heating capability with the following semantics. The heating device identifier is “heater1”. The maximum intensity of the heating device is 40 °C, and the minimum intensity is 20 °C. This specified device can support 40 levels in controlling the intensity. This device takes 10 ms to start and 20 ms to reach the target intensity. The location of the heating device is the left side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:HeatingCapabilityType"
id="heater1" zerothOrderDelayTime="10" firstOrderDelayTime="20"
maxIntensity="40" minIntensity="20" numOfLevels="40"
locator="urn:mpeg:mpeg-v:01-SI-LocationCS-NS:left"/>
```

5.6 Cooling capability type

5.6.1 General

This subclause specifies syntax and semantics of capabilities of cooling devices.

5.6.2 XML representation syntax

```
<complexType name="CoolingCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="maxIntensity" type="integer" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

```

    <attribute name="minIntensity" type="nonNegativeInteger"
        use="optional"/>
    <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
</complexContent>
</complexType>

```

5.6.3 Binary representation syntax

CoolingCapabilityType {	Number of bits	Mnemonic
maxIntensityFlag	1	bslbf
minIntensityFlag	1	bslbf
unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(minIntensityFlag){		
minIntensity	8	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.6.4 Semantics

Semantics of the CoolingCapabilityType type:

Name	Definition
CoolingCapabilityType	Tool for describing the capability of a device which can decrease the room temperature.
maxIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
minIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxIntensity	Describes the lowest temperature that the cooling device can provide in terms of Celsius.
minIntensity	Describes the highest temperature that the cooling device can provide in terms of Celsius.
unit	Specifies the unit of the intensity, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1 (it shall be a reference to either Celsius or Fahrenheit.). If the unit is not specified, the default unit is Celsius.
numOfLevels	Describes the number of temperature levels that the device can provide in between maximum and minimum temperature.

5.6.5 Examples

This example shows the description of a heating capability with the following semantics. The heating device identifier is “cooler1”. The maximum intensity of the cooling device is 15 °C, and the minimum intensity is 30 °C. This specified device can support 30 levels in controlling the intensity. This device takes 10 ms to start and 30 ms to reach the target intensity. The location of the heating device is the right side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:CoolingCapabilityType"
id="cooler1" zerothOrderDelayTime="10" firstOrderDelayTime="30"
maxIntensity="15" minIntensity="30" numOfLevels="30"
locator="urn:mpeg:mpeg-v:01-SI-LocationCS-NS:right"/>
```

5.7 Wind capability type

5.7.1 General

This subclause specifies syntax and semantics of capabilities of wind generating devices.

5.7.2 XML representation syntax

```
<complexType name="WindCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="maxWindSpeed" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"/>
```

```

        use="optional"/>
    </extension>
</complexContent>
</complexType>

```

5.7.3 Binary representation syntax

WindCapabilityType {	Number of bits	Mnemonic
maxWindSpeedFlag	1	bslbf
unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(maxWindSpeedFlag){		
maxWindSpeed	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.7.4 Semantics

Semantics of the WindCapabilityType type:

Name	Definition
WindCapabilityType	Tool for describing a wind capability.
maxWindSpeedFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
numOfLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
	means the attribute shall not be used.
maxWindSpeed	Describes the maximum wind speed that the fan can provide in terms of metre per second.
unit	Specifies the unit of the intensity, if a unit other than the default unit specified in the semantics of the maxWindSpeed is used, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1.
numOfLevels	Describes the number of wind speed levels that the device can provide in between maximum and minimum speed.

5.7.5 Examples

This example shows the description of a wind device capability with the following semantics. The wind device identifier is "fan01". The maximum wind speed of the wind device (possibly a fan) is 30 m/s. This specified device can support 5 levels in controlling the wind speed. This device takes 10 ms to start and 10 ms to reach the target intensity. The location of the heating device is the center according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:WindCapabilityType"
id="fan01" zerothOrderDelayTime="10" firstOrderDelayTime="10"
maxWindSpeed="30" numOfLevels="5" locator="urn:mpeg:mpeg-v:01-SI-
LocationCS-NS:center"/>
```

5.8 Vibration capability type

5.8.1 General

This subclause specifies syntax and semantics of capabilities of vibration generating devices.

5.8.2 XML representation syntax

```
<complexType name="VibrationCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="maxIntensity" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.8.3 Binary representation syntax

VibrationCapabilityType {	Number of bits	Mnemonic
maxIntensityFlag	1	bslbf

unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.8.4 Semantics

Semantics of the `VibrationCapabilityType` type:

Name	Definition
<code>VibrationCapabilityType</code>	Tool for describing a vibration capability.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>numOfLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensity</code>	Describes the maximum intensity that the vibrator device can provide in terms of Hertz.
<code>unit</code>	Specifies the unit of the intensity, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1.
<code>numOfLevels</code>	Describes the number of intensity levels that the device can provide in between zero and maximum intensity.

5.8.5 Examples

This example shows the description of a vibration device capability with the following semantics. The vibration device identifier is "vib001". The maximum intensity of the vibration device is 600 Hz. This specified device can support 4 levels in controlling the intensity. This device takes 0 ms to start and 10 ms to reach the target intensity. The location of the heating device is the center side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:VibrationCapabilityType"
id="vib001" zerothOrderDelayTime="0" firstOrderDelayTime="10"
maxIntensity="600" numOfLevels="4" locator="urn:mpeg:mpeg-v:01-SI-
LocationCS-NS:center"/>
```

5.9 Scent capability type

5.9.1 General

This subclause specifies syntax and semantics of capabilities of scent generating devices.

5.9.2 XML representation syntax

```
<complexType name="ScentCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <sequence>
        <element name="Scent" type="mpeg7:termReferenceType" minOccurs="0"
          maxOccurs="unbounded"/>
      </sequence>
      <attribute name="maxIntensity" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.9.3 Binary representation syntax

ScentCapabilityType {	Number of bits	Mnemonic
ScentFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(ScentFlag){		
LoopScent		vluimsbf5

for(k=0;k<LoopScent;k++){		
Scent[k]	9	blsbf
}		
}		
if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.9.4 Semantics

Semantics of the `ScentCapabilityType` type:

Name	Definition
<code>ScentCapabilityType</code>	Tool for describing a scent capability.
<code>ScentFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>numOfLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>LoopScent</code>	This field, which is only present in the binary representation, specifies the number of scent contained in the description.
<code>Scent</code>	Describes the list of scent that the perfumer can provide. The type of the scent shall be described using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6. A CS that may be used for this purpose is the

Name	Definition
	ScentCS defined in ISO/IEC 23005-6:—, A.2.4.
maxIntensity	Describes the maximum intensity that the perfumer can provide in terms of ml/h.
unit	Specifies the unit of the intensity, if a unit other than the default unit specified in the semantics of the maxIntensity is used, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
numOfLevels	Describes the number of intensity levels of the scent that the device can provide in between zero and maximum intensity.

5.9.5 Examples

This example shows the description of a scent device capability with the following semantics. The scent device identifier is "scent01". The maximum intensity of the scent amount is 5 ml/h with two levels of control. As this device takes 0 ms to start and 0 ms to reach the target intensity, it is not specified explicitly. The location of the scent device is the center side according to the position model described in ISO/IEC 23005-3:—, Figure 3. The type of scent is rose according to the ScentCS specified in ISO/IEC 23005-6:—, A.2.4.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:ScentCapabilityType"
id="scent01" maxIntensity="5" numOfLevels="2" locator="urn:mpeg:mpeg-v:01-
SI-LocationCS-NS:center">
  <dcdv:Scent>urn:mpeg:mpeg-v:01-SI-ScentCS-NS:rose</dcdv:Scent>
</cidl:SensoryDeviceCapability>
```

5.10 Fog capability type

5.10.1 General

This subclause specifies syntax and semantics of capabilities of fog generating devices.

5.10.2 XML representation syntax

```
<complexType name="FogCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="maxIntensity" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.10.3 Binary representation syntax

FogCapabilityType {	Number of bits	Mnemonic
---------------------	----------------	----------

FogCapabilityType {	Number of bits	Mnemonic

if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.10.4 Semantics

Semantics of the `FogCapabilityType` type:

Name	Definition
<code>FogCapabilityType</code>	Tool for describing a fog capability.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>numOfLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensity</code>	Describes the maximum intensity that the fog device can provide in terms of ml/h.
<code>unit</code>	Specifies the unit of the intensity, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

Name	Definition
numOfLevels	Describes the number of intensity levels of the fog that the device can provide in between zero and maximum intensity.

5.10.5 Examples

This example shows the description of a fog device capability with the following semantics. The fog device identifier is "fog11". The maximum intensity of the fog amount is 100 ml/h with five levels of control. This device takes 30 ms to start and 100 ms to reach the target intensity. The location of the scent device is the back side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:FogCapabilityType" id="fog11"
zerothOrderDelayTime="30" firstOrderDelayTime="100" maxIntensity="100"
numOfLevels="5" locator="urn:mpeg:mpeg-v:01-SI-LocationCS-NS:back"/>
```

5.11 Sprayer capability type

5.11.1 General

This subclause specifies syntax and semantics of capabilities of spraying devices.

5.11.2 XML representation syntax

```
<complexType name="SprayerCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="sprayingType" type="mpeg7:termReferenceType"/>
      <attribute name="maxIntensity" type="nonNegativeInteger"
        use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
      <attribute name="numOfLevels" type="nonNegativeInteger"
        use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

5.11.3 Binary representation syntax

SprayerCapabilityType {	Number of bits	Mnemonic
sprayingFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
numOfLevelsFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(sprayingFlag) {		

SprayerCapabilityType {	Number of bits	Mnemonic
spraying	8	blsbf
}		
if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
if(numOfLevelsFlag){		
numOfLevels	16	uimsbf
}		
}		

5.11.4 Semantics

Semantics of the `SprayerCapabilityType` type:

Name	Definition
<code>SprayerCapabilityType</code>	Tool for describing a water sprayer capability.
<code>sprayingFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>numOfLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>spraying</code>	Describes the type of the material that the sprayer can spray as a reference to a classification scheme term. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6. A CS that may be used for this purpose is the <code>SprayingTypeCS</code> defined in ISO/IEC 23005-6, A.2.7.

maxIntensity	Describes the maximum intensity that the water sprayer can provide in terms of ml/h.
unit	Specifies the unit of the intensity, if a unit other than the default unit specified in the semantics of the maxIntensity is used, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
numOfLevels	Describes the number of intensity levels of the fog that the device can provide in between zero and maximum intensity.

5.11.5 Examples

This example shows the description of a sprayer device capability with the following semantics. The sprayer device identifier is "spryr00". The maximum intensity of the spraying amount is 10 ml/h with three levels of control. This device takes 5 ms to start and 5 ms to reach the target intensity. The location of the sprayer device is the midway side according to the position model described in ISO/IEC 23005-3:—, Figure 3.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:SprayerCapabilityType"
id="spryr00" sprayingType="urn:mpeg:mpeg-v:01-SI-SprayingTypeCS-NS:water"
zerothOrderDelayTime="5" firstOrderDelayTime="5" maxIntensity="10"
numOfLevels="3" locator="urn:mpeg:mpeg-v:01-SI-LocationCS-NS:midway"/>
```

5.12 Color correction capability type

5.12.1 General

This subclause specifies syntax and semantics of capabilities of color correction enabled devices.

5.12.2 XML representation syntax

```
<complexType name="ColorCorrectionCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="flag" type="boolean" use="optional" default="false"/>
    </extension>
  </complexContent>
</complexType>
```

5.12.3 Binary representation syntax

ColorCorrectionCapabilityType {	Number of bits	Mnemonic
flagFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(flagFlag) {		
flag	1	bslbf

}		
}		

5.12.4 Semantics

Semantics of the `ColorCorrectionCapabilityType` type:

Name	Definition
<code>ColorCorrectionCapabilityType</code>	Tool for describing if the given device has a color correction capability.
<code>flagFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>flag</code>	Describes the existence of the color correction capability of the given device in terms of "true" and "false".

5.12.5 Examples

This example shows the description of a color correction capability with the following semantics. Since the flag is "true", the device "tv1" is equipped with a capability of color correction.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:ColorCorrectionCapabilityType"
flag="true" id="tv1"/>
```

5.13 Tactile capability type

5.13.1 General

This subclause specifies syntax and semantics of capabilities of tactile devices.

5.13.2 XML representation syntax

```
<complexType name="TactileCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <attribute name="intensityUnit" type="mpegvct:unitType"
        use="optional"/>

5.13.4 Semantics

Semantics of the TactileCapabilityType:

Name	Definition
TactileCapabilityType	Tool for describing a tactile device capability.
intensityUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValueFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
minValueFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
arraysizeXFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
arraysizeYFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
gapXFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
gapYFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
gapUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxUpdateRateFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
updateRateUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
actuatorTypeFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
extendArraySizeFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
intensityUnit	Specifies the unit of the intensity for max Value and min Value , as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. There is no default unit specified as the intensityUnit may vary depending on the type of the actuator used for the tactile device. For example, when an electrotactile device is selected the unit can be mA. For a pneumatic tactile device, the unit may be either psi or Pa; for a vibrotactile device, the unit may be hz (frequency), or mm (amplitude); for a thermal display, the unit may be either Celsius or Fahrenheit.
maxValue	Describes the maximum intensity that a tactile device can drive in the unit specified by the intensityUnit attribute.
minValue	Describes the minimum intensity that a tactile device can drive in the unit specified by the intensityUnit attribute.
arraysizeX	Describes a number of actuators in X (horizontal) direction since a tactile device is formed as m-by-n array types. (integer).
arraysizeY	Describes a number of actuators in Y (vertical) direction since a tactile device is formed as m-by-n array types. (integer).
gapX	Describes the X directional gap space between actuators in a tactile device. (mm).
gapY	Describes the Y directional gap space between actuators in a tactile device. (mm).
gapUnit	Specifies the unit of the description of gapX and gapY attributes as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than the default unit of mm is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.

Name	Definition
maxUpdateRate	Describes a maximum update rate that a tactile device can drive.
updateRateUnit	Specifies the unit of the description of maxUpdateRate as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than the default unit of Hz is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
actuatorType	Describes a type of tactile device (e.g. vibrating motor, electrotactile device, pneumatic device, piezoelectric device, thermal device, etc.) as a reference to a classification scheme. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6. A CS that may be used for this purpose is the TactileDisplayCS defined in ISO/IEC 23005-6:—, A.2.11.
numOfLevels	Describes the number of intensity levels that a tactile device can drive.

5.13.5 Examples

The following is an example of the TactileCapabilityType to indicate that the specified device can display tactile information. This example shows the description of tactile device capabilities and its features. Among several tactile devices, a thermal device with 10-by-4 array is selected. In the array, each thermal element locates with a 5 mm gap and maximum temperature the thermal display can generate is 34° in Celsius and the minimum is 16°. Each thermal element drives 8 different levels and the temperature new temperature presented can be updated up to 10 times per second.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:TactileCapabilityType"
intensityUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:celsius" maxValue="34"
minValue="16" arraysizeX="10" arraysizeY="4" gapX="5" gapY="5"
maxUpdateRate="10" actuatorType="urn:mpeg:mpeg-v:01-CI-TactileDisplayCS-
NS:thermal" numOfLevels="8"/>
```

5.14 Kinesthetic capability type

5.14.1 General

This subclause specifies syntax and semantics of capabilities of kinesthetic devices.

5.14.2 XML representation syntax

```

5.14.4 Semantics

Semantics of the KinestheticCapabilityType:

Name	Definition
KinestheticCapabilityType	Tool for describing a kinesthetic device capability.
MaximumTorqueFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
MaximumStiffnessFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall

Name	Definition
	be used and “0” means the attribute shall not be used.
forceUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
torqueUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
stiffnessUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfForceLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfTorqueLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
numOfStiffnessLevelsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
MaximumForce	Describes the maximum force that the device can provide stably for each axis. (N).
MaximumTorque	Describes the maximum torque referring maximum rotational force that the device can generate stably for each axis. (N-mm).
MaximumStiffness	Describes the maximum stiffness (rigidity) that the device can generate stably for each axis. (N/mm).
DOF	Describes the DOF (degree of freedom) of the device.
WorkSpace	Describes the workspace of the device. [e.g. width x height x depth (mm), three angles (degree)].
forceUnit	Specifies the unit of the description of <code>maximumForce</code> attribute as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than N (Newton) is used. 1 N refers to a force that produces an acceleration of 1 m/s ² for 1 kg mass. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
torqueUnit	Specifies the unit of the description of <code>maximumTorque</code> attribute as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than N-mm (Newton-millimetre) is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
stiffnessUnit	Specifies the unit of the description of <code>maximumTorque</code> attribute as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than N/mm (Newton per millimetre) is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003,

Name	Definition
	7.6.
numOfForceLevels	Describes the number of intensity levels of force that the kinesthetic device can drive.
numOfTorqueLevels	Describes the number of intensity levels of torque that the kinesthetic device can drive.
numOfStiffnessLevels	Describes the number of intensity levels of stiffness that the kinesthetic device can drive.

Semantics of the DOFType:

Name	Definition
DOFType	Defines a degree of freedom that shows a kinesthetic device provides several single (independent) movements.
Tx	A Boolean values whether a kinesthetic device allows x directional independent translation or not.
Ty	A Boolean values whether a kinesthetic device allows y directional independent translation or not.
Tz	A Boolean values whether a kinesthetic device allows z directional independent translation or not.
Rx	A Boolean values whether a kinesthetic device allows x directional independent rotation or not.
Ry	A Boolean values whether a kinesthetic device allows y directional independent rotation or not.
Rz	A Boolean values whether a kinesthetic device allows z directional independent rotation or not.

Semantics of the workspaceType:

Name	Definition
WorkspaceType	Defines ranges where a kinesthetic device can translate and rotate. According to DOF (degree of freedom), three translational values (width, height, and depth) in mm (millimetre) and three rotational values (roll, pitch, and yaw) in degree are defined.
Width	Defines a maximum range in the unit of mm (millimetre) that a kinesthetic device can translate in x-axis.
Height	Defines a maximum range in the unit of mm (millimetre) that a kinesthetic device can translate in y-axis.
Depth	Defines a maximum range in the unit of mm (millimetre) that a kinesthetic device can translate in z-axis.

Name	Definition
RotationX	Defines a maximum range that a kinesthetic device can rotate in x-axis, Θ (pitch).
RotationY	Defines a maximum range that a kinesthetic device can rotate in y-axis, Ψ (yaw).
RotationZ	Defines a maximum range that a kinesthetic device can rotate in z-axis, ϕ (roll).

5.14.5 Examples

The following is an example of the `KinestheticCapabilityType` to indicate that the specified kinesthetic device can display. This example shows the description of kinesthetic device capabilities. This 3DOF kinesthetic device can support maximum force, F (3.3 N, 2.1 N, 2.7 N) and maximum stiffness, K (1.45 N/mm, 2.5 N/mm, 1.07 N/mm) and its workspace is 180 mm (width), 130 mm (height), and 80 mm (depth).

5.15.4 Semantics

Semantics of the RigidBodyMotionCapabilityType type:

Name	Definition
RigidBodyMotionCapabilityType	Tool for describing the capability of rigid body motion effect.
MoveTowardCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
InclineCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
MoveTowardCapability	Describes the capability for move toward motion effect.
InclineCapability	Describes the capability for Incline motion effect.

Semantics of the MoveTowardCapabilityType type:

Name	Definition
------	------------

Name	Definition
MoveTowardCapability Type	Tool for describing a capability on move toward motion effect.
maxXDistanceFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxXDistance</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxYDistanceFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxYDistance</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxZDistanceFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxZDistance</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
distanceUnitFlag	This field, which is only present in the binary representation, signals the presence of the <code>distanceUnit</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxXSpeedFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxXSpeed</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxYSpeedFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxYSpeed</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxZSpeedFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxZSpeed</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
speedUnitFlag	This field, which is only present in the binary representation, signals the presence of the <code>activation</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxXAccelFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxXAccel</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxYAccelFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxYAccel</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxZAccelFlag	This field, which is only present in the binary representation, signals the presence of the <code>maxZAccel</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
accelUnitFlag	This field, which is only present in the binary representation, signals the presence of the <code>accelUnit</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
xDistanceLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>xDistanceLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
yDistanceLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>yDistanceLevels</code> attribute. A value of “1” means the

Name	Definition
	attribute shall be used and “0” means the attribute shall not be used.
zDistanceLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>zDistanceLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
xSpeedLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>xSpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
ySpeedLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>ySpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
zSpeedLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>zSpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
xAccelLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>xAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
yAccelLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>yAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
zAccelLevelsFlag	This field, which is only present in the binary representation, signals the presence of the <code>zAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxXDistance	Describes the maximum distance on x-axis that the device can provide in terms of centimetre. EXAMPLE The value “10” means the device can move maximum 10 cm on x-axis. NOTE The value “0” means the device cannot provide x-axis movement.
maxYDistance	Describes the maximum distance on y-axis that the device can provide in terms of centimetre.
maxZDistance	Describes the maximum distance on z-axis that the device can provide in terms of centimetre.
distanceUnit	Specifies the unit of the description of <code>MaxXDistance</code> , <code>MaxYDistance</code> , and <code>MaxZDistance</code> attributes as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than cm (centimetre) is used. These three attributes shall have the same unit. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
maxXSpeed	Describes the maximum speed on x-axis that the device can provide in terms of centimetre per second.
maxYSpeed	Describes the maximum speed on y-axis that the device can provide in terms of centimetre per second.

Name	Definition
maxZSpeed	Describes the maximum speed on z-axis that the device can provide in terms of centimetre per second.
speedUnit	Specifies the unit of the description of MaxXSpeed, MaxYSpeed, and MaxZSpeed attributes as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6, A.2.1, if any unit other than cm/s (centimetre per second) is used. These three attributes shall have the same unit. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
maxXAccel	Describes the maximum acceleration on x-axis that the device can provide in terms of centimetre per second square.
maxYAccel	Describes the maximum acceleration on y-axis that the device can provide in terms of centimetre per second square.
maxZAccel	Describes the maximum acceleration on z-axis that the device can provide in terms of centimetre per second square.
accelUnit	Specifies the unit of the description of MaxXAccel, MaxYAccel, and MaxZAccel attributes as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than cm/s ² (centimetre per second square) is used. These three attributes shall have the same unit. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
xDistancelevels	Describes the number of distance levels that the device can provide in between maximum and minimum distance on x-axis. EXAMPLE The value “5” means the device can provide 5 steps from minimum to maximum distance in x-axis.
yDistancelevels	Describes the number of distance levels that the device can provide in between maximum and minimum distance on y-axis.
zDistancelevels	Describes the number of distance levels that the device can provide in between maximum and minimum distance on z-axis.
xSpeedLevels	Describes the number of speed levels that the device can provide in between maximum and minimum speed on x-axis.
ySpeedLevels	Describes the number of speed levels that the device can provide in between maximum and minimum speed on y-axis.
zSpeedLevels	Describes the number of speed levels that the device can provide in between maximum and minimum speed on z-axis.
xAccelLevels	Describes the number of acceleration that the device can provide in between maximum and minimum acceleration on x-axis.
yAccelLevels	Describes the number of acceleration that the device can provide in between maximum and minimum acceleration on y-axis.

Name	Definition
zAccelLevels	Describes the number of acceleration that the device can provide in between maximum and minimum acceleration on z-axis.

Semantics of the `InclineCapabilityType`:

Name	Definition
<code>InclineCapabilityType</code>	Tool for describing a capability on motion chair incline effect.
<code>maxPitchAngleFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxPitchAngle</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxYawAngleFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxYawAngle</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxRollAngleFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxRollAngle</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxPitchSpeedFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxPitchSpeed</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxYawSpeedFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxYawSpeed</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxRollSpeedFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxRollSpeed</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>speedUnitFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>speedUnit</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxPitchAccelFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxPitchAccel</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxYawAccelFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxYawAccel</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxRollAccelFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>maxRollAccel</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>accelUnitFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>accelUnit</code> attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
<code>pitchAngleLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>pitchAngleLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>yawAngleLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>yawAngleLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>rollAngleLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>rollAngleLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>pitchSpeedLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>pitchSpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>yawSpeedLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>yawSpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>rollSpeedLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>rollSpeedLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>pitchAccelLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>pitchAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>yawAccelLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>yawAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>rollAccelLevelsFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>rollAccelLevels</code> attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxPitchAngle</code>	Describes the maximum angle of x-axis rotation in degrees that the device can provide. NOTE The rotation angle is increased with counterclockwise.
<code>maxYawAngle</code>	Describes the maximum angle of y-axis rotation in degrees that the device can provide. NOTE The rotation angle is increased with counterclockwise.
<code>maxRollAngle</code>	Describes the maximum angle of z-axis rotation in degrees that the device can provide. NOTE The rotation angle is increased with counterclockwise.
<code>maxPitchSpeed</code>	Describes the maximum speed of x-axis rotation that the device can provide in terms of degree per second.
<code>maxYawSpeed</code>	Describes the maximum speed of y-axis rotation that the device can provide in terms of degree per second.

Name	Definition
maxRollSpeed	Describes the maximum speed of z-axis rotation that the device can provide in terms of degree per second.
speedUnit	Specifies the common unit of the description of maxPitchSpeed, maxYawSpeed, and maxRollSpeed attributes as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than degree per second is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
maxPitchAccel	Describes the maximum acceleration of x-axis rotation that the device can provide in terms of degree per second square.
maxYawAccel	Describes the maximum acceleration of y-axis rotation that the device can provide in terms of degree per second square.
maxRollAccel	Describes the maximum acceleration of z-axis rotation that the device can provide in terms of degree per second square.
accelUnit	Specifies the common unit of the description of maxPitchAccel, maxYawAccel, and maxRollAccel attributes as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if any unit other than degree per second square is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
pitchAngleLevels	Describes the number of rotation angle levels that the device can provide in between maximum and minimum angle of x-axis rotation. EXAMPLE The value “5” means the device can provide 5 steps from minimum to maximum rotation angle on x-axis.
yawAngleLevels	Describes the number of rotation angle levels that the device can provide in between maximum and minimum angle of y-axis rotation.
rollAngleLevels	Describes the number of rotation angle levels that the device can provide in between maximum and minimum angle of z-axis rotation.
pitchSpeedLevels	Describes the number of rotation speed levels that the device can provide in between maximum and minimum speed of x-axis rotation. EXAMPLE The value “5” means the device can provide 5 steps from minimum to maximum rotation angle on x-axis.
yawSpeedLevels	Describes the number of rotation speed levels that the device can provide in between maximum and minimum speed of y-axis rotation.
rollSpeedLevels	Describes the number of rotation speed levels that the device can provide in between maximum and minimum speed of z-axis rotation.
pitchAccelLevles	Describes the number of rotation acceleration levels that the device can provide in between maximum and minimum acceleration of x-axis rotation.
yawAccelLevles	Describes the number of rotation acceleration levels that the device can provide in between maximum and minimum acceleration of y-axis rotation.

Name	Definition
rollAccelLevles	Describes the number of rotation acceleration levels that the device can provide in between maximum and minimum acceleration of z-axis rotation.

5.15.5 Examples

This example shows the description of a `RigidbodyMotion` capability. This device can move maximum 20 cm on x- and y-axis. The maximum moving speed of example device on x-axis, y-axis is 10 cm/s and z-axis is 0. Also, the maximum acceleration on x-axis, y-axis is 1 cm/s² and z-axis is 0. That is, example device can not move on z-axis. x speed level and acceleration level is "10" and "5", y speed level and acceleration level is "5", respectively. This device can also rotate 180° and 90° on x-axis and y-axis. The maximum rotation speed of example device on x-axis, y-axis is 10°/s and z-axis is 0. Also, the maximum acceleration on x-axis, y-axis is 2°/s² and z-axis is 0. That is, example device can not rotate on z-axis. x speed level and acceleration level is "1", y speed level and acceleration level is "1".

  accelUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:degpersecsquared"/>
</cidl:SensoryDeviceCapability>
```

5.16 Mobile device position capability type

5.16.1 General

This subclause specifies syntax and semantics of capability description including the description of the region within which a moving device can navigate.

5.16.2 XML representation syntax

```
<complexType name="MobileDevicePositionCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
      <sequence>
        <element name="Boundary" type="dcdv:PhysicalSpaceBoundingBoxType"/>
      </sequence>
    <!-- Precision -->
    <attribute name="numOfLongitudeLevels" type="nonNegativeInteger"
    use="optional"/>
    <attribute name="numOfLatitudeLevels" type="nonNegativeInteger"
    use="optional"/>
    <attribute name="numOfAltitudeLevels" type="nonNegativeInteger"
    use="optional"/>
  </extension>
```

```

    </complexContent>
  </complexType>

  <complexType name="PhysicalSpaceBoundingBoxType">

5.16.4 Semantics

Semantics of the MobileDevicePositionCapabilityType:

Names	Description
MobileDevicePositionCapabilityType	Tool for describing capabilities of a mobile device which can move to a destination given as a position in the global positioning system, i.e. in longitude, latitude, and altitude above sea level.
zerothOrderDelayTime	Describes required preparation time of the mobile device to be activated since it receives a command in the unit of millisecond (ms).
firstOrderDelayTime	Describes the delay time for a mobile device to reach the cruising speed since it receives a command and is activated in the unit of millisecond (ms).
location	Does not have any specific semantics in this description.
Boundary	Describes the destination position where the mobile device can reach in forms of three-dimensional bounding box, specified by using PhysicalSpaceBoundingBoxType.
numOfLongitudeLevelsFlag	This field, which is only present in the binary representation, indicates if the optional attribute of numOfLongitudeLevels is present in this instance of the description.

<i>Names</i>	<i>Description</i>
numOfLongitudeLevels	Describes the number of longitude levels that the device can provide in between upper bound and lower bound longitude positions.
numOfLatitudeLevelsFlag	This field, which is only present in the binary representation, indicates if the optional attribute of numOfLatitudeLevels is present in this instance of the description.
numOfLatitudeLevels	Describes the number of latitude levels that the device can provide in between upper bound and lower bound latitude positions.
numOfAltitudeLevelsFlag	This field, which is only present in the binary representation, indicates if the optional attribute of numOfAltitudeLevels is present in this instance of the description.
numOfAltitudeLevels	Describes the number of altitude levels that the device can provide in between upper bound and lower bound altitude positions.
unit	Does not have any specific semantics in this description.
longitudeUpperBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of upperBound of Longitude element is present in this instance of the description.
longitudeLowerBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of lowerBound of Longitude element is present in this instance of the description.
latitudeUpperBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of upperBound of Latitude element is present in this instance of the description.
latitudeLowerBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of lowerBound of Latitude element is present in this instance of the description.
altitudeUpperBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of upperBound of Altitude element is present in this instance of the description.
altitudeLowerBoundFlag	This field, which is only present in the binary representation, indicates if the optional attribute of lowerBound of Altitude element is present in this instance of the description.
altitudeUnitFlag	This field, which is only present in the binary representation, indicates if the optional attribute of unit of Altitude element is present in this instance of the description.
PhysicalSpaceBoundingBoxType	Describes a bounding box in a physical space using longitude, latitude, and altitude.
Longitude	Describes lower bound and upper bound of longitude for the bounding box that the mobile device can reach.
lowerBound	Lower bound of longitude given in degrees. Positive number represents eastern longitude and the negative number represents western longitude.

<i>Names</i>	<i>Description</i>
upperBound	Upper bound of longitude given in degrees. Positive number represents eastern longitude and the negative number represents western longitude.
Latitude	Describes lower bound and upper bound of latitude for the bounding box that the mobile device can reach.
lowerBound	Lower bound of latitude given in degrees. Positive number represents northern latitude and the negative number represents southern latitude.
upperBound	Upper bound of latitude given in degrees. Positive number represents northern latitude and the negative number represents southern latitude.
Altitude	Describes lower bound and upper bound of altitude for the bounding box that the mobile device can reach.
lowerBound	Lower bound of altitude above sea level given in metres. The default is zero.
upperBound	Upper bound of altitude above sea level given in metres.
unit	Specifies the unit of the lowerBound and upperBound of altitude, if a unit other than metre is used, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1.

5.16.5 Examples

The following example shows the capability description of a mobile device with ID “mobile1”, which can move from 127° East to 132° East in longitude, from 32° North to 45° North in latitude, and from 10 m to 1 200 m above sea level.

```
<cidl:SensoryDeviceCapability xsi:type="dcdv:MobileDevicePositionCapabilityType"
id="mobile1">
  <dcdv:Boundary>
    <dcdv:Longitude upperBound="132" lowerBound="127"/>
    <dcdv:Latitude upperBound="45" lowerBound="32"/>
    <dcdv:Altitude upperBound="1200" lowerBound="10" unit="urn:mpeg:mpeg-v:01-
CI-UnitTypeCS-NS:meter"/>
  </dcdv:Boundary>
</cidl:SensoryDeviceCapability>
```

5.17 Bubble capability type

5.17.1 General

This subclause specifies syntax and semantics of capabilities of bubble generating devices.

5.17.2 XML representation syntax

```
<complexType name="BubbleCapabilityType">
  <complexContent>
    <extension base="cidl:SensoryDeviceCapabilityBaseType">
```

```

<attribute name="flag" type="boolean" use="optional" default="false"/>
</extension>
</complexContent>
</complexType>

```

5.17.3 Binary representation syntax

BubbleCapabilityType {	Number of Bits	Mnemonic
flagFlag	1	bslbf
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
if(flagFlag) {		
flag	1	bslbf
}		
}		

5.17.4 Semantics

Semantics of the BubbleCapabilityType:

Name	Definition
BubbleCapabilityType	Tool for describing if the given device has a bubble capability.
flagFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
flag	Describes the existence of the bubble capability of the given device in terms of "true" and "false".

5.17.5 Examples

This example shows the description of a bubble capability with the following semantics. Since the flag is "true", the device "bubble1" is equipped with a capability of bubble.

```

<cidl:SensoryDeviceCapability xsi:type="dcdv:BubbleCapabilityType" flag="true"
id="bubble1"/>

```

6 Sensor capability description vocabulary

6.1 General

This Clause describes syntax and semantics of the sensor capability description vocabulary which comprises the following sensors:

- light sensor;
- ambient noise sensor;
- temperature sensor;
- humidity sensor;
- distance sensor;
- atmospheric pressure sensor;
- position sensor;
- velocity sensor;
- acceleration sensor;
- orientation sensor;
- angular velocity sensor;
- angular acceleration sensor;
- force sensor;
- torque sensor;
- pressure sensor;
- motion sensor;
- intelligent camera sensor;
- bend sensor;
- gas sensor;
- dust sensor;
- multi interaction point sensor;
- gaze tracking sensor;
- global position sensor;
- altitude sensor;
- weather sensor;
- camera sensor;
- proximity sensor;
- body weight sensor;
- engine oil temperature sensor;

- intake air temperature sensor;
- tire pressure monitor system sensor;
- distance traveled sensor;
- speed sensor;
- vehicle speed sensor;
- mass air flow sensor;
- fuel level sensor;
- manifold absolute pressure sensor;
- EngineRPM sensor.

NOTE SCDV has been designed in an extensible way and additional sensor capabilities can be added easily.

6.2 Schema wrapper conventions

The syntax defined in this Clause assumes the following schema wrapper to form a valid XML schema document.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema"
xmlns:mpeg7="urn:mpeg:mpeg7:schema:2004" xmlns:dia="urn:mpeg:mpeg21:2003:01-DIA-
NS" xmlns:mpegvct="urn:mpeg:mpeg-v:2016:01-CT-NS" xmlns:cidl="urn:mpeg:mpeg-
v:2016:01-CIDL-NS" xmlns:scdv="urn:mpeg:mpeg-v:2016:01-SCDV-NS"
targetNamespace="urn:mpeg:mpeg-v:2016:01-SCDV-NS" elementFormDefault="qualified"
attributeFormDefault="unqualified" version="ISO/IEC 23005-2" id="MPEG-V-
SCDV.xsd">
  <import namespace="urn:mpeg:mpeg7:schema:2004"
schemaLocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
7_schema_files/mpeg7-v2.xsd"/>
  <import namespace="urn:mpeg:mpeg21:2003:01-DIA-NS"
schemaLocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
21_schema_files/dia-2nd/UEB-2nd.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-CIDL-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/CIDL.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-CT-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-CT.xsd"/>
```

Additionally, the following line should be appended to the resulting schema document in order to obtain a well-formed XML document.

```
</schema>
```

6.3 Light sensor capability type

6.3.1 General

This subclause specifies syntax and semantics of light sensor capabilities.

6.3.2 XML representation syntax

```
<complexType name="LightSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Color" type="mpegvct:colorType" minOccurs="0"
          maxOccurs="unbounded"/>
        <element name="Location" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

6.3.3 Binary representation syntax

LightSensorCapabilityType {	Number of bits	Mnemonic
ColorFlag	1	bslbf
LocationFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(ColorFlag){		
LoopColor		vluimsbf5
for(k=0;k<LoopColor;k++){		
Color[k]		ColorType
}		
}		
if(LocationFlag){		
Location		Float3DVectorType
}		
}		
Float3DVectorType {		
X	32	fsbf
Y	32	fsbf
Z	32	fsbf
}		

6.3.4 Semantics

Semantics of the `LightSensorCapabilityType` type:

Name	Definition
LightSensorCapabilityType	Tool for describing a light sensor capability.
ColorFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
LocationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValue	Describes the maximum value that the light sensor can perceive in terms of LUX.
minValue	Describes the minimum value that the light sensor can perceive in terms of LUX.
LoopColor	This field, which is only present in the binary representation, specifies the number of color contained in the description.
Color	Describes the list of colors which the lighting device can provide either as a reference to a classification scheme term or as RGB value. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6. A CS that may be used for this purpose is the <code>ColorCS</code> defined in ISO/IEC 23005-6:—, A.2.2. EXAMPLE <code>urn:mpeg:mpeg-v:01-SI-ColorCS-NS:alice_blue</code> would describe the color Alice blue.
Location	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis in the unit of metre (m).

6.3.5 Examples

This example shows the description of a light sensing capability with the following semantics. The sensor has an ID of "LS001" and the maximum value shall be 400 (LUX) and the minimum value shall be 0 (LUX) with the resolution of 50 levels. The accuracy of the sensor is 10.0 (LUX). The offset of sensor is 1.5 (LUX). The sensor shall detect the color, #FF0000. The sensed information is received at the location of (1.00, 1.00, -1.00).

```
<cidl:SensorDeviceCapability xsi:type="scdv:LightSensorCapabilityType" id="LS001"
maxValue="400" minValue="0" numOfLevels="50" offset="1.5">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="10.0"/>
  <scdv:Color>#FF0000</scdv:Color>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>
```

6.4 Ambient noise sensor capability type

6.4.1 General

This subclause specifies syntax and semantics of ambient noise sensor capabilities.

6.4.2 XML representation syntax

```
<complexType name="AmbientNoiseSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Location" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

6.4.3 Binary representation syntax

AmbientNoiseSensorCapabilityType {	Number of bits	Mnemonic
LocationFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(LocationFlag){		
Location		Float3DVectorType
}		
}		

6.4.4 Semantics

Semantics of the AmbientNoiseSensorCapabilityType type:

Name	Definition
AmbientNoiseSensorCapabilityType	Tool for describing an ambient noise sensor capability.
LocationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValue	Describes the maximum value that the ambient noise sensor can perceive in terms of decibel (dB).
minValue	Describes the minimum value that the ambient noise sensor can perceive in terms of decibel (dB).

Name	Definition
Location	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis in the unit of metre (m).

6.4.5 Examples

This example shows the description of an ambient noise sensing capability with the following semantics. The sensor has an ID of "ANS001" and the maximum value shall be 200 (dB) and the minimum value shall be -100 (dB) with the resolution of 600 levels. The accuracy of the sensor is 0.5 (dB), the offset of sensor is 0.1 (dB). The sensed information is received at the location of (1.00, 1.00, -1.00).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:AmbientNoiseSensorCapabilityType"
id="ANS001" maxValue="200" minValue="-100" numOfLevels="600" offset="0.1">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>
```

6.5 Temperature sensor capability type

6.5.1 General

This subclause specifies syntax and semantics of temperature sensor capabilities.

6.5.2 XML representation syntax

```
<complexType name="TemperatureSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Location" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

6.5.3 Binary representation syntax

TemperatureSensorCapabilityType {	Number of bits	Mnemonic
LocationFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(LocationFlag){		
Location		Float3DVectorType

}		
}		

6.5.4 Semantics

Semantics of the `TemperatureSensorCapabilityType` type:

Name	Definition
<code>TemperatureSensorCapabilityType</code>	Tool for describing a temperature sensor capability.
<code>LocationFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxValue</code>	Describes the maximum value that the temperature sensor can perceive in the unit of Celsius (or Fahrenheit).
<code>minValue</code>	Describes the minimum value that the temperature sensor can perceive in the unit of Celsius (or Fahrenheit).
<code>Location</code>	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis in the unit of metre (m).

6.5.5 Examples

This example shows the description of a temperature sensing capability with the following semantics. The sensor has an ID of "TS001" and the maximum value shall be 120 (°C) and the minimum value shall be -20 (°C) with the resolution of 1 400 levels. The accuracy of the sensor is 0.1 (°C). The offset of sensor is 1.0 (°C). The sensed information is received at the location of (1.00, 1.00, -1.00).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:TemperatureSensorCapabilityType"
id="TS001"      maxValue="120"      minValue="-20"      numOfLevels="1400"      offset="1.0"
unit="celsius">
  <cidl:Accuracy      xsi:type="cidl:ValueAccuracy"      value="0.1"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>
```

6.6 Humidity sensor capability type

6.6.1 General

This subclause specifies syntax and semantics of humidity sensor capabilities.

6.6.2 XML representation syntax

```
<complexType name="HumiditySensorCapabilityType">
```

```

<complexContent>
  <extension base="cidl:SensorCapabilityBaseType">
    <sequence>
      <element name="Location" type="mpegvct:Float3DVectorType"
        minOccurs="0"/>
    </sequence>
  </extension>
</complexContent>
</complexType>

```

6.6.3 Binary representation syntax

HumiditySensorCapabilityType {	Number of bits	Mnemonic
LocationFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(LocationFlag){		
Location		Float3DVectorType
}		
}		

6.6.4 Semantics

Semantics of the HumiditySensorCapabilityType type:

Name	Definition
HumiditySensorCapabilityType	Tool for describing a humidity sensor capability.
LocationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValue	Describes the maximum value that the humidity sensor can perceive in the unit of percentage.
minValue	Describes the minimum value that the humidity sensor can perceive in the unit of percentage.
Location	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis in the unit of metre (m).

6.6.5 Examples

This example shows the description of a humidity sensing capability with the following semantics. The sensor has an ID of "HS001" and the maximum value shall be 100 (%) and the minimum value shall be 0 (%) with the resolution of 1 000 levels. The accuracy of the sensor is 0.1 (%). The offset of sensor is 1.0 (%). The sensed information is received at the location of (1.00, 1.00, -1.00).

```

<cidl:SensorDeviceCapability          xsi:type="scdv:HumiditySensorCapabilityType"
id="HS001" maxValue="100" minValue="0" numOfLevels="1000" offset="1.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>

```

6.7 Distance sensor capability type

6.7.1 General

This subclause specifies syntax and semantics of distance sensor capabilities.

6.7.2 XML representation syntax

```

<complexType name="DistanceSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Location" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>

```

6.7.3 Binary representation syntax

DistanceSensorCapabilityType {	Number of bits	Mnemonic
LocationFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(LocationFlag){		
Location		Float3DVectorType
}		
}		

6.7.4 Semantics

Semantics of the DistanceSensorCapabilityType type:

Name	Definition
DistanceSensorCapability Type	Tool for describing a distance sensor capability.

Name	Definition
LocationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValue	Describes the maximum value that the distance sensor can perceive in the unit of metre.
minValue	Describes the minimum value that the distance sensor can perceive in the unit of metre.
Location	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis in the unit of metre (m).

6.7.5 Examples

This example shows the description of a distance sensing capability with the following semantics. The sensor has an ID of "DS001" and the maximum value shall be 10 (m) and the minimum value shall be 0 (m) with the resolution of 1 000 levels. The accuracy of the sensor is 0.01 (m). The offset of sensor is 0.1 (m). The sensed information is received at the location of (1.00, 1.00, -1.00).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:DistanceSensorCapabilityType"
id="DS001" maxValue="10" minValue="0" numOfLevels="1000" offset="0.1">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>
```

6.8 Atmospheric pressure sensor capability type

6.8.1 General

This subclause specifies syntax and semantics of atmospheric pressure sensor capabilities.

6.8.2 XML representation syntax

```
<complexType name="AtmosphericPressureSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Location" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

6.8.3 Binary representation syntax

AtmosphericPressureSensorCapabilityType {	Number of bits	Mnemonic
LocationFlag	1	bslbf

SensorCapabilityBase		SensorCapabilityBaseType
if(LocationFlag){		
Location		Float3DVectorType
}		
}		

6.8.4 Semantics

Semantics of the AtmosphericPressureSensorCapabilityType type:

Name	Definition
AtmosphericPressureSensorCapabilityType	Tool for describing an atmospheric pressure sensor capability.
LocationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxValue	Describes the maximum value that the atmospheric pressure sensor can perceive in the unit of hectopascal (hPa).
minValue	Describes the minimum value that the atmospheric pressure sensor can perceive in the unit of hectopascal (hPa).
Location	Describes the location of the device from the global coordinate system according to the x-, y-, and z-axis.

6.8.5 Examples

This example shows the description of an atmospheric pressure sensing capability with the following semantics. The sensor has an ID of "APS001" and the maximum value shall be 1 075 (hPa) and the minimum value shall be 910 (hPa) with the resolution of 1 650 levels. The accuracy of the sensor is 0.1 (hPa). The offset of sensor is 1.0 (hPa). The sensed information is received at the location of (1.00, 1.00, -1.00).

```
<cidl:SensorDeviceCapability
xsi:type="scdv:AtmosphericPressureSensorCapabilityType" id="APS001"
maxValue="1075.0" minValue="910.0" numOfLevels="1650" offset="1.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>
```

6.9 Position sensor capability type

6.9.1 General

This subclause specifies syntax and semantics of position sensor capabilities.

6.9.2 XML representation syntax

```
<complexType name="PositionSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="Range" type="scdv:RangeType"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>

<complexType name="RangeType">
  <sequence>
    <element name="XminValue" type="float"/>
    <element name="XmaxValue" type="float"/>
    <element name="YminValue" type="float"/>
    <element name="YmaxValue" type="float"/>
    <element name="ZminValue" type="float"/>
    <element name="ZmaxValue" type="float"/>
  </sequence>
</complexType>
```

6.9.3 Binary representation syntax

PositionSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
Range		RangeType
}		
RangeType {		
XminValue	32	fsbf
XmaxValue	32	fsbf
YminValue	32	fsbf
YmaxValue	32	fsbf
ZminValue	32	fsbf
ZmaxValue	32	fsbf
}		

6.9.4 Semantics

Semantics of the `PositionSensorCapabilityType` type:

Name	Definition
<code>PositionSensorCapabilityType</code>	Tool for describing a position sensor capability.
<code>unit</code>	Describes the unit of the sensor's measuring value. Specifies the unit of the sensor's measuring value as a reference to a classification scheme term provided by <code>UnitTypesCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>XmaxValue/YmaxValue/ZmaxValue</code> and <code>XminValue/YminValue/ZminValue</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
<code>Range</code>	Describes the range that the position sensor can perceive in terms of <code>RangeType</code> in its global coordinate system. NOTE The <code>minValue</code> and the <code>maxValue</code> in the <code>SensorCapabilityBaseType</code> are not used for this sensor.
<code>RangeType</code>	Defines the range in a local coordinate system relative to the position of the sensor in idle state according to the x-, y-, and z-axis.
<code>XminValue</code>	Describes the minimum value that the position sensor can perceive along the x-axis in the unit of metre.
<code>XmaxValue</code>	Describes the maximum value that the position sensor can perceive along the x-axis in the unit of metre.
<code>YminValue</code>	Describes the minimum value that the position sensor can perceive along the y-axis in the unit of metre.
<code>YmaxValue</code>	Describes the maximum value that the position sensor can perceive along the y-axis in the unit of metre.
<code>ZminValue</code>	Describes the minimum value that the position sensor can perceive along the z-axis in the unit of metre.
<code>ZmaxValue</code>	Describes the maximum value that the position sensor can perceive along the z-axis in the unit of metre.

6.9.5 Examples

This example shows the description of a position sensing capability with the following semantics. The sensor has an ID of "PS001" and the maximum value shall be `XmaxValue="10.0"`, `YmaxValue="10.0"`, and `ZmaxValue="10.0"` (m), and the minimum value shall be `XminValue="-10.0"`, `YminValue="-10.0"`, and `ZminValue="-10.0"` (m) with the resolution of 2 000 levels. The accuracy of the sensor is 0.01 (m). The SNR of the sensor is 0.1 (dB). The offset of sensor is 1.0 (m).

```
<cidl:SensorDeviceCapability xsi:type="scdv:PositionSensorCapabilityType"
id="PS001" numOfLevels="2000" SNR="0.1" offset="1.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
  <scdv:Range xsi:type="scdv:RangeType">
```

```

<scdv:XminValue>-10.0</scdv:XminValue>
<scdv:XmaxValue>10.0</scdv:XmaxValue>
<scdv:YminValue>-10.0</scdv:YminValue>
<scdv:YmaxValue>10.0</scdv:YmaxValue>
<scdv:ZminValue>-10.0</scdv:ZminValue>
<scdv:ZmaxValue>10.0</scdv:ZmaxValue>
</scdv:Range>
</cidl:SensorDeviceCapability>

```

6.10 Velocity sensor capability type

6.10.1 General

This subclause specifies syntax and semantics of velocity sensor capabilities.

6.10.2 XML representation syntax

```

<complexType name="VelocitySensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>

```

6.10.3 Binary representation syntax

VelocitySensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.10.4 Semantics

Semantics of the VelocitySensorCapabilityType type:

Name	Definition
VelocitySensorCapabilityType	Tool for describing a velocity sensor capability.
maxValue	Describes the maximum value that the velocity sensor can perceive in terms of m/s for the given axis.
minValue	Describes the minimum value that the velocity sensor can perceive in terms of m/s for the given axis.

6.10.5 Examples

This example shows the description of a velocity sensing capability with the following semantics. The sensor has an ID of "VS001" and the maximum value shall be 50 (m/s) and the minimum value shall be 0.1 (m/s) with the resolution of 5 000 levels. The accuracy of the sensor is 0.01 (m/s). The offset of sensor is 0.5 (m/s).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:VelocitySensorCapabilityType"
id="VS001" maxValue="50.0" minValue="0.1" numOfLevels="5000" offset="0.5">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability>
```

6.11 Acceleration sensor capability type

6.11.1 General

This subclause specifies syntax and semantics of acceleration sensor capabilities.

6.11.2 XML representation syntax

```
<complexType name="AccelerationSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.11.3 Binary representation syntax

AccelerationSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.11.4 Semantics

Semantics of the AccelerationSensorCapabilityType type:

Name	Definition
AccelerationSensorCapabilityType	Tool for describing an acceleration sensor capability.
maxValue	Describes the maximum value that the acceleration sensor can perceive in terms of m/s ² for the given axis.
minValue	Describes the minimum value that the acceleration sensor can perceive in terms of m/s ² for the given axis.

6.11.5 Examples

This example shows the description of an acceleration sensing capability with the following semantics. The sensor has an ID of "AS001" and the maximum value shall be 9.8 (m/s²) and the minimum value shall be -9.8 (m/s²) with the resolution of 1 000 levels. The accuracy of the sensor is 0.01 (m/s²). The offset of sensor is 0.5 (m/s²).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:AccelerationSensorCapabilityType"
id="AS001" maxValue="9.8" minValue="-9.8" numOfLevels="1000" offset="0.5">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability>
```

```
</cidl:SensorDeviceCapability>
```

6.12 Orientation sensor capability type

6.12.1 General

This subclause specifies syntax and semantics of orientation sensor capabilities.

6.12.2 XML representation syntax

```
<complexType name="OrientationSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="OrientationRange" type="scdv:OrientationRangeType"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>

<complexType name="OrientationRangeType">
  <sequence>
    <element name="YawMin" type="float"/>
    <element name="YawMax" type="float"/>
    <element name="PitchMin" type="float"/>
    <element name="PitchMax" type="float"/>
    <element name="RollMin" type="float"/>
    <element name="RollMax" type="float"/>
  </sequence>
</complexType>
```

6.12.3 Binary representation syntax

OrientationSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
OrientationRange		OrientationRangeType
}		
OrientationRangeType {		
YawMin	32	fsbf
YawMax	32	fsbf
PitchMin	32	fsbf
PitchMax	32	fsbf
RollMin	32	fsbf
RollMax	32	fsbf

}		
---	--	--

6.12.4 Semantics

Semantics of the `OrientationSensorCapabilityType` type:

Name	Definition
<code>OrientationSensorCapabilityType</code>	Tool for describing an orientation sensor capability.
<code>OrientationRange</code>	Describes the range that the orientation sensor can perceive in terms of <code>OrientationRangeType</code> .
<code>OrientationRangeType</code>	Defines the range from the local coordinate system according to the Yaw, Pitch, and Roll.
<code>YawMin</code>	Describes the minimum value that the orientation sensor can perceive for Yaw in the unit of degree.
<code>YawMax</code>	Describes the maximum value that the orientation sensor can perceive for Yaw in the unit of degree.
<code>PitchMin</code>	Describes the minimum value that the orientation sensor can perceive for Pitch in the unit of degree.
<code>PitchMax</code>	Describes the maximum value that the orientation sensor can perceive for Pitch in the unit of degree.
<code>RollMin</code>	Describes the minimum value that the orientation sensor can perceive for Roll in the unit of degree.
<code>RollMax</code>	Describes the maximum value that the orientation sensor can perceive for Roll in the unit of degree.

NOTE 1 The local coordinate system is defined as right-handed coordinate system.

Since the sensor has multidimensional information, the `OrientationRangeType` defined in this subclause shall be used to describe the range of the possible value instead of the `minValue` and the `maxValue` in the `SensorCapabilityBaseType` for this sensor.

6.12.5 Examples

This example shows the description of an orientation sensing capability with the following semantics. The sensor has an ID of "OS001" and the maximum value shall be `YawMax="10.0"`, `PitchMax="10.0"` and `RollMax="10.0"` (rad), and the minimum value shall be `YawMin="-10.0"`, `PitchMin="-10.0"` and `RollMin="-10.0"` (rad) with the resolution of 1 000 levels. The accuracy of the sensor is 0.01 (rad). The SNR of the sensor is 0.1 (dB). The offset of sensor is 1.0 (rad).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:OrientationSensorCapabilityType"
id="OS001" unit="radian" numOfLevels="1000" SNR="0.1" offset="1.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
  <scdv:OrientationRange xsi:type="scdv:OrientationRangeType">
    <scdv:YawMin>-10.0</scdv:YawMin>
    <scdv:YawMax>10.0</scdv:YawMax>
    <scdv:PitchMin>-10.0</scdv:PitchMin>
```

```

<scdv:PitchMax>10.0</scdv:PitchMax>
<scdv:RollMin>-10.0</scdv:RollMin>
<scdv:RollMax>10.0</scdv:RollMax>
</scdv:OrientationRange>
</cidl:SensorDeviceCapability>

```

6.13 Angular velocity sensor capability type

6.13.1 General

This subclause specifies syntax and semantics of angular velocity sensor capabilities.

6.13.2 XML representation syntax

```

<complexType name="AngularVelocitySensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>

```

6.13.3 Binary representation syntax

AngularVelocitySensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.13.4 Semantics

Semantics of the AngularVelocitySensorCapabilityType type:

Name	Definition
AngularVelocitySensorCapabilityType	Tool for describing an angular velocity sensor capability.
maxValue	Describes the maximum value that the angular velocity sensor can perceive in terms of rad/s for each axis.
minValue	Describes the minimum value that the angular velocity sensor can perceive in terms of rad/s for each axis.

6.13.5 Examples

This example shows the description of an angular velocity sensing capability with the following semantics. The sensor has an ID of "AVS001" and the maximum value shall be 5.0 (rad/s) and the minimum value shall be -5.0 (rad/s) with the resolution of 1 000 levels. The accuracy of the sensor is 0.01 (rad/s). The offset of sensor is 0.01 (rad/s).

```
<cidl:SensorDeviceCapability xsi:type="scdv:AngularVelocitySensorCapabilityType"
id="AVS001" unit="radpersec" maxValue="5.0" minValue="-5.0" numOfLevels="1000"
offset="0.01">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability>
```

6.14 Angular acceleration sensor capability type

6.14.1 General

This subclause specifies syntax and semantics of angular acceleration sensor capabilities.

6.14.2 XML representation syntax

```
<complexType name="AngularAccelerationSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.14.3 Binary representation syntax

AngularAccelerationSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.14.4 Semantics

Semantics of the AngularAccelerationSensorCapabilityType type:

Name	Definition
AngularAccelerationSensorCapabilityType	Tool for describing an angular acceleration sensor capability.
maxValue	Describes the maximum value that the angular acceleration sensor can perceive in terms of rad/s ² for each axis.
minValue	Describes the minimum value that the angular acceleration sensor can perceive in terms of rad/s ² for each axis.

6.14.5 Examples

This example shows the description of an angular acceleration sensing capability with the following semantics. The sensor has an ID of "AAS001" and the maximum value shall be 200.0 (rad/s²) and the minimum value shall be -200.0 (rad/s²) with the resolution of 1 000 levels. The accuracy of the sensor is 0.1 (rad/s²). The offset of sensor is 0.5 (rad/s²).

```

<cidl:SensorDeviceCapability
xsi:type="scdv:AngularAccelerationSensorCapabilityType"          id="AAS001"
unit="radpersecsquared"    maxValue="200.0"    minValue="-200.0"    numOfLevels="1000"
offset="0.5">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
</cidl:SensorDeviceCapability>

```

6.15 Force sensor capability type

6.15.1 General

This subclause specifies syntax and semantics of force sensor capabilities.

6.15.2 XML representation syntax

```

<complexType name="ForceSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>

```

6.15.3 Binary representation syntax

ForceSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.15.4 Semantics

Semantics of the ForceSensorCapabilityType:

Name	Definition
ForceSensorCapabilityType	Tool for describing a force sensor capability.
maxValue	Describes the maximum value that the force sensor can perceive in terms of N (Newton) for each axis.
minValue	Describes the minimum value that the force sensor can perceive in terms of N (Newton) for each axis.

6.15.5 Examples

This example shows the description of a force sensing capability with the following semantics. The sensor has an ID of "FS001" and the maximum value shall be 5.0 (N) and the minimum value shall be 0.0 (N) with the resolution of 500 levels. The accuracy of the sensor is 0.01 (N). The offset of sensor is 0.05 (N).

```
<cidl:SensorDeviceCapability xsi:type="scdv:ForceSensorCapabilityType" id="FS001"
maxValue="5.0" minValue="0.0" numOfLevels="500" offset="0.05">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
</cidl:SensorDeviceCapability>
```

6.16 Torque sensor capability type

6.16.1 General

This subclause specifies syntax and semantics of torque sensor capabilities.

6.16.2 XML representation syntax

```
<complexType name="TorqueSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.16.3 Binary representation syntax

TorqueSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.16.4 Semantics

Semantics of the TorqueSensorCapabilityType:

Name	Definition
TorqueSensorCapabilityType	Tool for describing a torque sensor capability.
maxValue	Describes the maximum value that the torque sensor can perceive in terms of N-mm (Newton millimetre) for each axis.
minValue	Describes the minimum value that the torque sensor can perceive in terms of N-mm (Newton millimetre) for each axis.

6.16.5 Examples

This example shows the description of a torque sensing capability with the following semantics. The sensor has an ID of "TS001" and the maximum value shall be 200.0 (N-mm) and the minimum value shall be 0.0 (N-mm) with the resolution of 20 000 levels. The accuracy of the sensor is 0.01 (N-mm). The offset of sensor is 0.05 (N-mm).

```
<cidl:SensorDeviceCapability          xsi:type="scdv:TorqueSensorCapabilityType"
id="ToS001" maxValue="200.0" minValue="0.0" numOfLevels="20000" offset="0.05">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability>
```

6.17 Pressure sensor capability type

6.17.1 General

This subclause specifies syntax and semantics of pressure sensor capabilities.

6.17.2 XML representation syntax

```
<complexType name="PressureSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.17.3 Binary representation syntax

PressureSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.17.4 Semantics

Semantics of the PressureSensorCapabilityType:

Name	Definition
PressureSensorCapabilityType	Tool for describing a pressure sensor capability.
maxValue	Describes the maximum value that the pressure sensor can perceive in terms of N/mm ² (Newton/millimetre square) for each axis.
minValue	Describes the minimum value that the pressure sensor can perceive in terms of N/mm ² (Newton/millimetre square) for each axis.

6.17.5 Examples

This example shows the description of a pressure sensing capability with the following semantics. The sensor has an ID of "PRS001" and the maximum value shall be 2.5 (N/mm²) and the minimum value shall be 0.0 (N/mm²) with the resolution of 2 500 levels. The accuracy of the sensor is 0.001 (N/mm²). The offset of sensor is 0.05 (N/mm²).

```
<cidl:SensorDeviceCapability          xsi:type="scdv:PressureSensorCapabilityType"
id="PRS001" maxValue="2.5" minValue="0.0" numOfLevels="2500" offset="0.05">
```

```
<cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.001"/>
</cidl:SensorDeviceCapability>
```

6.18 Motion sensor capability type

6.18.1 General

This subclause specifies syntax and semantics of motion sensor capabilities.

6.18.2 XML representation syntax

```
<complexType name="MotionSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="PositionCapability"
          type="scdv:PositionSensorCapabilityType" minOccurs="0"/>
        <element name="OrientationCapability"
          type="scdv:OrientationSensorCapabilityType" minOccurs="0"/>
        <element name="VelocityCapability"
          type="scdv:VelocitySensorCapabilityType" minOccurs="0"/>
        <element name="AngularVelocityCapability"
          type="scdv:AngularVelocitySensorCapabilityType" minOccurs="0"/>
        <element name="AccelerationCapability"
          type="scdv:AccelerationSensorCapabilityType" minOccurs="0"/>
        <element name="AngularAccelerationCapability"
          type="scdv:AngularAccelerationSensorCapabilityType"
          minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

6.18.3 Binary representation syntax

MotionSensorCapabilityType {	Number of bits	Mnemonic
PositionCapabilityFlag	1	bslbf
OrientationCapabilityFlag	1	bslbf
VelocityCapabilityFlag	1	bslbf
AngularVelocityCapabilityFlag	1	bslbf
AccelerationCapabilityFlag	1	bslbf
AngularAccelerationCapabilityFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(PositionCapabilityFlag){		
PositionCapability		PositionSensorCapabilityType

MotionSensorCapabilityType {	Number of bits	Mnemonic
}		
if(OrientationCapabilityFlag){		
OrientationCapability		OrientationSensorCapabilityType
}		
if(VelocityCapabilityFlag){		
VelocityCapability		VelocitySensorCapabilityType
}		
if(AngularVelocityCapabilityFlag){		
AngularVelocityCapability		AngularVelocitySensorCapabilityType
}		
if(AccelerationCapabilityFlag){		
AccelerationCapability		AccelerationSensorCapabilityType
}		
if(AngularAccelerationCapabilityFlag){		
AngularAccelerationCapability		AngularAccelerationSensorCapabilityType
}		
}		

6.18.4 Semantics

Semantics of the MotionSensorCapabilityType type:

Name	Definition
MotionSensorCapabilityType	Tool for describing a motion sensor capability.
PositionCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
OrientationCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
VelocityCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
AngularVelocityCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
AccelerationCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
AngularAccelerationCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
PositionCapability	Describes the capability with respect to the position as defined in PositionSensorCapabilityType.
OrientationCapability	Describes the capability with respect to the orientation as defined in OrientationSensorCapabilityType.
VelocityCapability	Describes the capability with respect to the velocity as defined in VelocitySensorCapabilityType.
AngularVelocityCapability	Describes the capability with respect to the angular as defined in AngularVelocitySensorCapabilityType.
AccelerationCapability	Describes the capability with respect to the acceleration as defined in AccelerationSensorCapabilityType.
AngularAccelerationCapability	Describes the capability with respect to the angular acceleration as defined in AngularAccelerationSensorCapabilityType.

6.18.5 Examples

This example shows the description of a motion sensing capability with the following semantics. The motion sensor is with ID of "MS001". It is composed of position sensor with ID "MSPC001", orientation sensor with ID "MSOC001", velocity sensor with ID "MSVC0001", angular velocity sensor with ID "MSAVC0001", acceleration sensor with ID "MSAC0001", and angular acceleration sensor with ID "MSAAC0001".

```
<cidl:SensorDeviceCapability          xsi:type="scdv:MotionSensorCapabilityType"
id="MS001">
  <scdv:PositionCapability id="MSPC001" SNR="0.1" numOfLevels="10000"
  xsi:type="scdv:PositionSensorCapabilityType">
    <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
    <scdv:Range xsi:type="scdv:RangeType">
      <scdv:XminValue>0.0</scdv:XminValue>
      <scdv:XmaxValue>3.0</scdv:XmaxValue>
      <scdv:YminValue>0.0</scdv:YminValue>
      <scdv:YmaxValue>3.0</scdv:YmaxValue>
      <scdv:ZminValue>0.0</scdv:ZminValue>
      <scdv:ZmaxValue>3.0</scdv:ZmaxValue>
    </scdv:Range>

6.19.4 Semantics

Semantics of the `IntelligentCameraCapabilityType` type:

Name	Definition
<code>IntelligentCameraCapabilityType</code>	Tool for describing an intelligent camera capability.
<code>MaxBodyFeaturePointsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>MaxFaceFeaturePointsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>TrackedFeatureFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>TrackedFacialFeaturePointsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>TrackedBodyFeaturePointsFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>featureTrackingStatusFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>facialExpressionTrackingStatusFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>gestureTrackingStatusFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>MaxBodyFeaturePoints</code>	Describes the maximum number of body feature points that the intelligent camera can track.
<code>MaxFaceFeaturePoints</code>	Describes the maximum number of facial feature points that the intelligent camera can track.
<code>TrackedFeature</code>	Describes what kind of feature points can be tracked as given in <code>FeatureType</code> , e.g. body, face, or both.
<code>FeatureType</code>	Describes the types of feature to be tracked. (face, body, or both).

In the binary description, the following mapping table is used.

Term of <code>FeatureType</code>	Binary representation for feature type (2 bits)
----------------------------------	---

Name	Definition								
	<table> <tr> <td>Face</td><td>00</td></tr> <tr> <td>Body</td><td>01</td></tr> <tr> <td>Both</td><td>10</td></tr> <tr> <td>Reserved</td><td>11</td></tr> </table>	Face	00	Body	01	Both	10	Reserved	11
Face	00								
Body	01								
Both	10								
Reserved	11								
TrackedFacialFeature Points	Describes whether each of the facial feature points orderly listed in ISO/IEC 23005-4:2013, 5.2.7.4 is active or not, based on FacialFeatureMask.								
TrackedBodyFeature Points	Describes whether each of the body feature points orderly listed in ISO/IEC 23005-4:2013, 5.2.7.6 is active or not, based on BodyFeatureMask.								
featureTracking Status	Describes whether the feature tracking is capable or not.								
facialExpression TrackingStatus	Describes whether the intelligent camera can extract the facial animation or not.								
gestureTracking Status	Describes whether the intelligent camera can extract the body animation or not.								
FacialFeatureMask	Provides a Boolean map of facial feature points in the order listed in ISO/IEC 23005-4:2013, 5.2.7.4 to identify active feature points.								
BodyFeatureMask	Provides a Boolean map of body feature points in the order listed in ISO/IEC 23005-4:2013, 5.2.7.6 to identify active feature points.								

6.19.5 Examples

This example shows the description of an intelligent camera sensing capability.

```
<cidl:SensorDeviceCapability xsi:type="scdv:IntelligentCameraCapabilityType"
id="IC001" featureTrackingStatus="true" gestureTrackingStatus="true">
  <scdv:MaxBodyFeaturePoint>69</scdv:MaxBodyFeaturePoint>

if(DistanceBtwnLocationsFlag){		
DistanceBtwnLocations	32	fsbf
}		
if(NumOfAxesFlag){		
NumOfAxes	2	uimsbf
}		
}		

6.20.4 Semantics

Semantics of the BendSensorType:

Name	Definition
BendSensorCapabilityType	Tool for describing a bend sensor capability.
NumOfLocationsFlag	This field, which is only present in the binary representation, indicates the presence of the “numOfLocations” attribute. A value of “1” implies that the attribute shall be used and a value of “0” implies that the attribute shall not be used.
DistanceBtwnLocationsFlag	This field, which is only present in the binary representation, indicates the presence of the “distanceBtwnLocations” attribute. A value of “1” implies that the attribute shall be used and a value of “0” implies that the attribute shall not be used.
NumOfAxesFlag	This field, which is only present in the binary representation, indicates the presence of the “numOfAxes” attribute. A value of “1” implies that the attribute shall be used and a value of “0” implies that the attribute shall not

Name	Definition
	be used.
numOfChannelsFlag	This field, which is only present in the binary representation, indicates the presence of the “numOfChannels” attribute. A value of “1” implies that the attribute shall be used and a value of “0” implies that the attribute shall not be used.
maxValue	Describes the maximum value that the bend sensor can perceive in terms of degree.
minValue	Describes the minimum value that the bend sensor can perceive in terms of degree.
NumOfLocations	Describes the number of locations that a bend sensor can sense bend angles.
DistanceBtwnLocations	Describes the distance between the adjacent sensing locations in terms of metre.
NumOfAxes	Describes the dimension that the bend sensor can perceive the bend angles.
numOfChannels	Describes the number of channels that an array of bend sensors can perceive. The default value of the number of channels is 1.

6.20.5 Examples

This example shows the description of a bend sensing capability with the following semantics. The sensor has an ID of “BendID_01” and the number of channels is 1. The channel has its ID of “Ch1”, three sensing locations with a single axis, the distance between the sensing locations of 0.03 m, and the maximum and minimum values of 90° and 0°, respectively.

```
<cidl:SensorDeviceCapability                                xsi:type="scdv:BendSensorCapabilityType"
id="BendID_01" numOfChannels="1">
  <scdv:Channels id="Ch1" maxValue="90" minValue="0">
    <scdv:NumOfLocations>
      3
    </scdv:NumOfLocations>
    <scdv:DistanceBtwnLocations>
      0.03
    </scdv:DistanceBtwnLocations>
    <scdv:NumOfAxes>
      1
    </scdv:NumOfAxes>
  </scdv:Channels>
</cidl:SensorDeviceCapability>
```

6.21 Gas sensor capability type

6.21.1 General

This subclause specifies syntax and semantics of gas sensor capabilities.

6.21.2 XML representation syntax

```

<complexType name="GasSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="GasType" type="mpeg7:termReferenceType" minOccurs="0"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>

```

6.21.3 Binary representation syntax

GasSensorCapabilityType {	Number of bits	Mnemonic
GasTypeFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(GasTypeFlag){		
GasType	16	uimbsf
}		
}		

6.21.4 Semantics

Semantics of the GasSensorCapabilityType:

Name	Definition
GasSensorCapabilityType	Tool for describing a gas sensor capability.
e	
GasTypeFlag	This field, which is only present in the binary representation, signals the presence of the GasType element. A value of "1" means the element shall be used and "0" means the element shall not be used.
GasType	Describes the sensed type by the gas sensor. Tool for describing a gas type as a reference to a classification scheme term provided by GasTypeCS defined in ISO/IEC 23005-6:—, A.2.12.8. The details of the structure and use of classification scheme and termReferencetype description is defined in ISO/IEC 15938-5:2003, 7.6. EXAMPLE urn:mpeg:mpeg-v:01-CI-GasCS-NS:oxygen would describe oxygen gas.
maxValue	Describes the maximum value that the gas sensor can perceive in terms of ppm (parts per million).
minValue	Describes the minimum value that the gas sensor can perceive in terms of ppm (parts per million).

6.21.5 Examples

This example shows the description of a gas sensing capability with the following semantics. The sensor has an ID of "GSID_01" and the maximum value shall be 25.0 (ppm) and the minimum value shall be 0.0 (ppm) with the resolution of 100 levels. The accuracy of the sensor is 0.001 (ppm). The offset of sensor is 0.05 (ppm).

```
<cidl:SensorDeviceCapability xsi:type="scdv:GasSensorCapabilityType" id="GSID_01"
minValue="0.0"          maxValue="25.0"          numOfLevels="100"          offset="0.05"
unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:ppm">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.001"/>
</cidl:SensorDeviceCapability>
```

6.22 Dust sensor capability type

6.22.1 General

This subclause specifies syntax and semantics of dust sensor capabilities.

6.22.2 XML representation syntax

```
<complexType name="DustSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.22.3 Binary representation syntax

DustSensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.22.4 Semantics

Semantics of the DustSensorCapabilityType:

Name	Definition
DustSensorCapabilityType	Tool for describing a dust sensor capability.
pe	
maxValue	Describes the maximum value that the dust sensor can perceive in terms of $\mu\text{g}/\text{m}^3$ (micrograms per cubic metre).
minValue	Describes the minimum value that the dust sensor can perceive in terms of $\mu\text{g}/\text{m}^3$ (micrograms per cubic metre).

6.22.5 Examples

This example shows the description of a dust sensing capability with the following semantics. The sensor has an ID of "DTID_01" and the maximum value shall be 1 000 ($\mu\text{g}/\text{m}^3$) and the minimum value shall be 1 ($\mu\text{g}/\text{m}^3$) with the resolution of 1 000 levels. The accuracy of the sensor is 1 ($\mu\text{g}/\text{m}^3$). The offset of sensor is 5 ($\mu\text{g}/\text{m}^3$).

```
<cidl:SensorDeviceCapability xsi:type="scdv:DustSensorCapabilityType"
id="DSID_01" minValue="1" maxValue="1000" numOfLevels="1000" offset="5" >
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="1"/>
</cidl:SensorDeviceCapability>
```

6.23 Multi interaction point sensor capability type

6.23.1 General

This subclause specifies syntax and semantics of multi interaction point sensor capabilities.

6.23.2 XML representation syntax

```
<complexType name="MultiInteractionPointSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <attribute name="numOfInteractionPoints" type="nonNegativeInteger"
use="optional" default="1"/>
    </extension>
  </complexContent>
</complexType>
```

6.23.3 Binary representation syntax

MultiInteractionPointSensorCapabilityType {	Number of bits	Mnemonic
numOfInteractionPointsFlag	1	bslbf
SensorCapabilityBase		SensorCapabilityBaseType
if(numOfInteractionPointsFlag){		
numOfInteractionPoints	16	uimsbf
}		
}		

6.23.4 Semantics

Semantics of the MultiInteractionPointSensorCapabilityType:

Name	Definition
MultiInteractionPointSensorCapabilityType	Tool for describing a multi interaction-point sensor capability.
numOfInteractionPointsFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute

Name	Definition
g	shall be used and "0" means the attribute shall not be used.
numOfInteractionPoints	Describes the number of interaction points that a multi interaction point sensor includes.

6.23.5 Examples

The following is an example of the `MultiInteractionPointSensorCapability` to indicate the capable number of interaction points. This example shows that the given Multi Interaction Point Sensor with ID of "MIPS_ID1" has 5 interaction points to receive user's selection.

```
<cidl:SensorDeviceCapability
xsi:type="scdv:MultiInteractionPointSensorCapabilityType" id="MIPSID_01"
numOfInteractionPoints="5"/>
```

6.24 Gaze tracking sensor capability type

6.24.1 General

This subclause specifies syntax and semantics of gaze tracking sensor capabilities.

6.24.2 XML representation syntax

```
<complexType name="GazeTrackingSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="PositionCapability"
type="scdv:PositionSensorCapabilityType" minOccurs="0"/>
        <element name="OrientationCapability"
type="scdv:OrientationSensorCapabilityType" minOccurs="0"/>
      </sequence>
      <attribute name="gazeTrackingOn" type="boolean" use="optional"
default="false"/>
      <attribute name="blinkTrackingOn" type="boolean" use="optional"
default="false"/>
    </extension>
  </complexContent>
</complexType>
```

6.24.3 Binary representation syntax

GazeTrackingSensorCapabilityType {	Number of bits	Mnemonic
PositionCapabilityFlag	1	bslbf
OrientationCapabilityFlag	1	bslbf
gazeTrackingOnFlag	1	bslbf
blinkTrackingOnFlag	1	bslbf

SensorCapabilityBase		SensorCapabilityBaseType
if(PositionCapabilityFlag){		
PositionCapability		PositionSensorCapabilityType
}		
if(OrientationCapabilityFlag){		
OrientationCapability	1	OrientationSensorCapabilityType
}		
if(gazeTrackingOnFlag){		
gazeTrackingOn	1	bslbf
}		
if(blinkTrackingOnFlag){		
blinkTrackingOn	1	bslbf
}		
}		

6.24.4 Semantics

Semantics of the GazeTrackingSensorCapabilityType:

Name	Definition
GazeTrackingSensorCapabilityType	Tool for describing a Gaze tracking sensor capability.
PositionCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the element shall be used and “0” means the element shall not be used.
OrientationCapabilityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
gazeTrackingOnFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
blinkTrackingOnFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
PositionCapability	Describes the capability with respect to the position as defined in PositionSensorCapabilityType.
OrientationCapability	Describes the capability with respect to the orientation as defined in

Name	Definition						
	OrientationSensorCapabilityType.						
gazeTrackingOn	Indicates whether the gaze tracking sensor can track user's gazes or not. "false" means the gaze tracking sensor does not detect the gaze and "true" means the sensor does detect. In the binary description, the following mapping table is used. <table border="1"> <tr> <th>Binary value (1 bits)</th><th>whether detecting gaze or not</th></tr> <tr> <td>0</td><td>Not detecting gaze</td></tr> <tr> <td>1</td><td>Detecting gaze</td></tr> </table>	Binary value (1 bits)	whether detecting gaze or not	0	Not detecting gaze	1	Detecting gaze
Binary value (1 bits)	whether detecting gaze or not						
0	Not detecting gaze						
1	Detecting gaze						
blinkTrackingOn	Indicates whether the gaze tracking sensor can detect the user's blinking or not. "false" means the gaze tracking sensor does not detect eye's blinking and "true" means the sensor does detect. In the binary description, the following mapping table is used. <table border="1"> <tr> <th>Binary value (1 bits)</th><th>Whether detecting eye's blinking or not</th></tr> <tr> <td>0</td><td>Not detecting eye's blinking</td></tr> <tr> <td>1</td><td>Detecting eye's blinking</td></tr> </table>	Binary value (1 bits)	Whether detecting eye's blinking or not	0	Not detecting eye's blinking	1	Detecting eye's blinking
Binary value (1 bits)	Whether detecting eye's blinking or not						
0	Not detecting eye's blinking						
1	Detecting eye's blinking						

6.24.5 Examples

This example shows the description of a gaze tracking sensor capability with the following semantics. The sensor has an ID of "GTS001" and it can track the position and the orientation of user's gaze while it cannot sense user's blinking.

```
<cidl:SensorDeviceCapability xsi:type="scdv:GazeTrackingSensorCapabilityType"
id="GTS001" gazeTrackingOn="true" blinkTrackingOn="false"/>
```

6.25 Global position sensor capability type

6.25.1 General

This subclause specifies syntax and semantics of global position sensor capabilities.

6.25.2 XML representation syntax

```
<complexType name="GlobalPositionSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="VariousAccuracy" type="scdv:VariousAccuracyType"
minOccurs="0" maxOccurs="unbounded"/>
      </sequence>
    </extension>
  </complexContent>
</complexType>
```

```

        <attribute name="crs" type="anyURI"
default="urn:ogc:def:crs:EPSG::4326"/>
        <attribute name="latitudeOffset" type="float" use="optional"/>
        <attribute name="longitudeOffset" type="float" use="optional"/>
        <attribute name="maxOperatingTemp" type="float" use="optional"/>
        <attribute name="minOperatingTemp" type="float" use="optional"/>
    </extension>
</complexContent>
</complexType>

<complexType name="VariousAccuracyType">
    <attribute name="accuracyType" type="mpeg7:termReferenceType"/>
    <attribute name="value" type="float" use="required"/>
    <attribute name="accuracyUnit" type="mpeg7:termReferenceType"/>
</complexType>

```

6.25.3 Binary representation syntax

GlobalPositionSensorCapabilityType {	Number of bits	Mnemonic
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
latitudeOffsetFlag	1	bslbf
longitudeOffsetFlag	1	bslbf
maxOperatingTempFlag	1	bslbf

6.25.4 Semantics

Semantics of the GlobalPositionSensorCapabilityType:

Name	Definition
GlobalPositionSensorCapabilityType	Tool for describing a GPS sensor capability.
Accuracy	Describes the degree of closeness of a measured quantity of longitude to its actual value in AccuracyType.
LatitudeAccuracy	Describes the degree of closeness of a measured quantity of latitude to its actual value in AccuracyType.
unit	Does not have any meaningful semantics in this description.
maxValue	Does not have any meaningful semantics in this description.
minValue	Does not have any meaningful semantics in this description.
offset	Describes the value added to a base value of longitude in order to get to a specific absolute value.
VariousAccuracy	Describes the accuracy in various points of view. Each occurrence of this element defines one type of accuracy. This element defines the accuracy by using three attributes defined. The accuracyType attribute specifies the type of the accuracy by referencing the AccuracyTypeCS in A.2. The value attribute specifies the value to denote the accuracy. The unit attribute specifies the unit of the value attribute by referencing the UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1.
crs	Specifies the URI of the coordinate reference system based on which the values of longitude, latitude and altitude are given. The default is urn:ogc:def:crs:EPSG::4326 specifying the Coordinate Reference System (CRS) with code 4326 specified in the EPSG database available at http://www.epsg.org/ .
longitudeOffset	Describes the value added to a base value of longitude in order to get to a specific absolute value.
latitudeOffset	Describes the value added to a base value of latitude in order to get to a

Name	Definition
	specific absolute value.
numOfLevels	Describes the number of value levels that the sensor can perceive in between maximum and minimum value of longitude. EXAMPLE The value "5" means the sensor can perceive 5 steps from minValue to maxValue.
sensitivity	Describes the minimum magnitude of input signal required to produce a specified output signal in given unit.
SNR	Describes the ratio of a signal power to the noise power corrupting the signal.
maxOperatingTemp	Describes the number of locations that a bend sensor can sense bending angles.
minOperatingTemp	Describes the distance between the adjacent sensing locations.

Semantics of the VariousAccuracyType

Name	Definition
VariousAccuracy	Tool for describing accuracy of the sensor in various points of view.
accuracyType	This attribute specifies the accuracy type, e.g. distance accuracy or reacquisition time, by referencing to the AccuracyTypeCS in A.2.
value	This attribute specifies the value of the accuracy.
accuracyUnit	This attribute specifies the unit of the accuracy description by referenceing to the UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1.

6.25.5 Examples

This example shows the description of a global position sensor's sensing capability with the following semantics. The sensor has an ID of "gps01" with the maximum operating temperature of 90 °C, minimum operating temperature of -30 °C, sensitivity of 0.01°, and the position accuracy of 0.01°.

```
<cidl:SensorDeviceCapability  xsi:type="scdv:GlobalPositionSensorCapabilityType"
id="gps01"                    crs="urn:ogc:def:crs:EPSG::4326"                maxOperatingTemp="90"
minOperatingTemp="-30" sensitivity="0.01">
  <scdv:VariousAccuracy      value="0.01"                accuracyType=":mpeg:mpeg-v:01-
AccuracyTypeCS-NS:PositionAccuracy"
                                accuracyUnit="urn:mpeg:mpeg-v:01-CI-
UnitTypeCS-NS:degree"/>
</cidl:SensorDeviceCapability>
```

6.26 Altitude sensor capability type

6.26.1 General

This subclause specifies syntax and semantics of altitude sensor capabilities.

6.26.2 XML representation syntax

```
<complexType name="AltitudeSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <attribute name="crs" type="anyURI"
default="urn:ogc:def:crs:EPSG::4326"/>
    </extension>
  </complexContent>
</complexType>
```

6.26.3 Binary representation syntax

AltitudeSensorCapabilityType {	Number of bits	Mnemonic
SensoryDeviceCapabilityBase		SensoryDeviceCapabilityBaseType
crs		UTF-8
}		

6.26.4 Semantics

Semantics of the `AltitudeSensorCapabilityType`.

Name	Definition
<code>AltitudeSensorCapabilityType</code>	Tool for describing an altitude sensor capability.
<code>crs</code>	Specifies the URI of the coordinate reference system based on which the values of longitude, latitude and altitude are given. The default is <code>urn:ogc:def:crs:EPSG::4326</code> specifying the Coordinate Reference System (CRS) with code 4326 specified in the EPSG database available at http://www.epsg.org/ .
<code>Accuracy</code>	Describes the degree of closeness of a measured quantity to its actual value in <code>AccuracyType</code> .
<code>unit</code>	Specifies the unit of the sensor's measuring value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxValue</code> and <code>minValue</code> is used for the values of <code>maxValue</code> and <code>minValue</code> are used. The default unit is metre.
<code>maxValue</code>	Describes the maximum altitude that the altitude sensor can perceive in metres.
<code>minValue</code>	Describes the minimum altitude that the altitude sensor can perceive in metres.
<code>offset</code>	Describes the value needed to be added to a base value in order to get to a specific absolute value.

Name	Definition
numOfLevels	Describes the number of altitude levels that the sensor can perceive in between maximum and minimum value. EXAMPLE The value "5" means the sensor can perceive 5 steps from minValue to maxValu
sensitivity	Describes the minimum magnitude of input signal required to produce a specified output signal in given unit.
SNR	Describes the ratio of a signal power to the noise power corrupting the signal.

6.26.5 Examples

This example shows the description of an altitude sensing capability with the following semantics. The sensor has an ID of "ASID_01" and the maximum value shall be 1 000 (metre) and the minimum value shall be 0 (metre) with the resolution of 2 000 levels. The accuracy of the sensor is 0.5 (metre). The offset of sensor is 5 (metre).

```
<cidl:SensorDeviceCapability          xsi:type="scdv:AltitudeSensorCapabilityType"
id="ASID_01" minValue="0" maxValue="1000" numOfLevels="2000" offset="5" >
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>
```

6.27 Weather sensor capability type

6.27.1 General

This subclause specifies syntax and semantics of weather sensor capabilities.

6.27.2 XML representation syntax

```
<complexType name="WeatherSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="TemperatureCapability"
type="scdv:TemperatureSensorCapabilityType" minOccurs="0"/>
        <element name="PrecipitationCapability" minOccurs="0">
          <complexType>
            <complexContent>
              <extension base="cidl:SensorCapabilityBaseType"/>
            </complexContent>
          </complexType>
        </element>
        <element name="SnowCapability" minOccurs="0">
          <complexType>
            <complexContent>
              <extension base="cidl:SensorCapabilityBaseType"/>
            </complexContent>
          </complexType>
        </element>
        <element name="WindCapability" minOccurs="0">
          <complexType>
            <complexContent>
```

```

        <extension base="cidl:SensorCapabilityBaseType"/>
    </complexContent>
</complexType>
</element>
<element name="HumidityCapability"
type="scdv:HumiditySensorCapabilityType" minOccurs="0"/>
</sequence>
</extension>
</complexContent>
</complexType>

```

6.27.3 Binary representation syntax

WeatherSensorCapabilityType {	Number of bits	Mnemonic
TemperatureCapabilityFlag	1	bslbf

If (SnowCapabilityFlag) {		
SnowCapability		SensorCapabilityBaseType
}		
If (WindCapabilityFlag) {		
WindCapability		SensorCapabilityBaseType
}		
If (HumidityCapabilityFlag) {		
HumidityCapability		HumiditySensorCapabilityType
}		
}		

6.27.4 Semantics

Semantics of the `WeatherSensorCapabilityType`:

Name	Definition
<code>WeatherSensorCapabilityType</code>	Tool for describing capabilities of a weather sensor, which may be either a physical sensor or a virtual sensor that can produce weather information or can gather weather information in various means.
<code>TemperatureCapabilityFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>TemperatureCapability</code> element. A value of “1” means that this element is present and “0” means that this element is not present.
<code>PrecipitationCapabilityFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>PrecipitationCapability</code> element. A value of “1” means that this element is present and “0” means that this element is not present.
<code>SnowCapabilityFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>SnowCapability</code> element. A value of “1” means that this element is present and “0” means that this element is not present.
<code>WindCapabilityFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>WindCapability</code> element. A value of “1” means that this element is present and “0” means that this element is not present.
<code>HumidityCapabilityFlag</code>	This field, which is only present in the binary representation, signals the presence of the <code>HumidityCapability</code> element. A value of “1” means that this element is present and “0” means that this element is not present.
<code>TemperatureCapability</code>	Element to describe the temperature-related capability of a weather sensor. If this element is not instantiated, the given Weather sensor is unable to provide temperature information.
<code>PrecipitationCapability</code>	Element to describe the precipitation-related capability of a weather sensor. If this element is not instantiated, the given Weather sensor is unable to provide precipitation information.
<code>SnowCapability</code>	Element to describe the snow-related capability of a weather sensor. If this element is not instantiated, the given Weather sensor is unable to provide snow information.
<code>WindCapability</code>	Element to describe the wind-related capability of a weather sensor. If this element is not instantiated, the given Weather sensor is unable to provide wind information.
<code>HumidityCapability</code>	Element to describe the humidity-related capability of a weather sensor. If this element is not instantiated, the given Weather sensor is unable to provide humidity information.
<code>sensorCapabilityBaseAttributes</code>	There are <code>sensorCapabilityBaseAttributes</code> inherited from the <code>SensorCapabilityBaseType</code> at the top level of the <code>WeatherSensorCapabilityType</code> as well as at each individual capability description of temperature, precipitation, snow, wind and humidity sensor. In this capability description, the attributes defined in the <code>sensorCapabilityBaseAttributes</code> of the top level are disabled and not used except the <code>id</code> and <code>sensorIdRef</code> attributes.

6.27.5 Examples

The following is an example of the `WeatherSensorCapabilityType` to indicate that the capability of the given sensor. This example shows that the given Weather sensor with ID of "WSC_ID1" can sense humidity, temperature, and snow. The humidity information can be provided between 5 % and 90 % with sensitivity of 1 %, the temperature information can be provided between 100 °C and -100 °C in 200 levels, and the snow information can be provided with maximum of 100 cm/min, in 200 levels.

```
<cidl:SensorDeviceCapability          xsi:type="scdv:WeatherSensorCapabilityType"
id="WSC_ID1">
  <scdv:TemperatureCapability maxValue="100" minValue="-100" numOfLevels="200"
unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:celsius"/>
  <scdv:SnowCapability maxValue="100" numOfLevels="200" unit="urn:mpeg:mpeg-
v:01-CI-UnitTypeCS-NS:centimeterperhour"/>
  <scdv:HumidityCapability maxValue="90" minValue="5" numOfLevels="90"
sensitivity="1"/>
</cidl:SensorDeviceCapability>
```

6.28 Camera sensor capability type

6.28.1 General

This subclause specifies syntax and semantics of camera sensor capabilities. This camera sensor capability supports the capabilities of the camera sensor, the spectrum camera sensor, the color camera sensor, the depth camera sensor, the stereo camera sensor, and the thermographic camera sensor specified in ISO/IEC 23005-5.

6.28.2 XML representation syntax

```
<complexType name="CameraSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
      <sequence>
        <element name="SupportedResolutions" type="scdv:ResolutionListType"
minOccurs="0"/>
        <element name="FocalLengthRange" type="scdv:ValueRangeType"

6.28.4 Semantics

Semantics of the CameraSensorCapabilityType:

Name	Definition
CameraSensorCapabilityType	Tool for describing a camera sensor capability.
SupportedResolutionsFlag	This field, which is only present in the binary representation, signals the presence of the SupportedResolutions element. A value of “1” means that this element is present and “0” means that this element is not present.
SupportedResolutions	Describes a list of resolution that the camera can support.
ResolutionListType	Describes a type of the resolution list which is composed of ResolutionType element.
ResolutionType	Describes a type of resolution which is composed of Width element and Height element.
Width	Describes a width of resolution that the camera can perceive.
Height	Describes a height of resolution that the camera can perceive
FocalLengthRangeFlag	This field, which is only present in the binary representation, signals the presence of the FocalLengthRange element. A value of “1”

Name	Definition
	means that this element is present and "0" means that this element is not present.
FocalLengthRange	Describes the range of the focal length that the camera sensor can perceive in terms of <code>ValueRangeType</code> . Its default unit is millimetres (mm). NOTE The <code>minValue</code> and the <code>maxValue</code> in the <code>SensorCapabilityBaseType</code> are not used for this sensor.
ValueRangeType	Defines the range of the value that the sensor can perceive.
MaxValue	Describes the maximum value that the sensor can perceive.
MinValue	Describes the minimum value that the sensor can perceive.
ApertureRangeFlag	This field, which is only present in the binary representation, signals the presence of the <code>ApertureRange</code> element. A value of "1" means that this element is present and "0" means that this element is not present.
ApertureRange	Describes the range of the aperture that the camera sensor can perceive in terms of <code>ValueRangeType</code> . NOTE The <code>minValue</code> and the <code>maxValue</code> in the <code>SensorCapabilityBaseType</code> are not used for this sensor.
ShutterSpeedRangeFlag	This field, which is only present in the binary representation, signals the presence of the <code>ShutterSpeedRange</code> element. A value of "1" means that this element is present and "0" means that this element is not present.
ShutterSpeedRange	Describes the range of the shutter speed that the camera sensor can perceive in terms of <code>ValueRangeType</code> . Its default unit is seconds (sec). NOTE The <code>minValue</code> and the <code>maxValue</code> in the <code>SensorCapabilityBaseType</code> are not used for this sensor.

6.28.5 Examples

This example shows the description of a camera sensing capability with the following semantics. The camera sensor has an ID of "CSCID_001". The sensor has a list of the supported resolutions, 1280 × 720 (width × height) and 1920 × 1080. The maximum focal length of the sensor is 100 (mm) and the minimum focal length is 5 (mm). The maximum aperture of the sensor is F1.4 and the minimum aperture is F8. The maximum shutter speed of the sensor is 1 (sec) and the minimum shutter speed is 0.001 (sec).

```
<cidl:SensorDeviceCapability          xsi:type="scdv:CameraSensorCapabilityType"
id="CSCID_001">
  <scdv:SupportedResolutions>
    <scdv:Resolution>
      <scdv:Width>1280</scdv:Width>
      <scdv:Height>720</scdv:Height>
    </scdv:Resolution>
    <scdv:Resolution>
      <scdv:Width>1920</scdv:Width>
```

```

    </scdv:SupportedResolutions>
    <scdv:FocalLengthRange>
      <scdv:MaxValue>100</scdv:MaxValue>
      <scdv:MinValue>5</scdv:MinValue>
    </scdv:FocalLengthRange>
    <scdv:ApertureRange>
      <scdv:MaxValue>1.4</scdv:MaxValue>
      <scdv:MinValue>8</scdv:MinValue>
    </scdv:ApertureRange>
    <scdv:ShutterSpeedRange>
      <scdv:MaxValue>1</scdv:MaxValue>
      <scdv:MinValue>0.001</scdv:MinValue>
    </scdv:ShutterSpeedRange>
  </cidl:SensorDeviceCapability>

```

6.29 Proximity sensor capability type

6.29.1 General

This subclause specifies syntax and semantics of proximity sensor capabilities.

6.29.2 XML representation syntax

```

<complexType name="ProximitySensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>

```

6.29.3 Binary representation syntax

ProximitySensorCapabilityType {	Number of bits	Mnemonic
SensorCapabilityBase		SensorCapabilityBaseType
}		

6.29.4 Semantics

Semantics of the ProximitySensorCapabilityType:

Name	Definition
ProximitySensorCapabilityType	Tool for describing a proximity sensor capability.
maxValue	Describes the maximum value that the proximity sensor can perceive in the unit of metre.
minValue	Describes the minimum value that the proximity sensor can perceive in the unit of metre.

6.29.5 Examples

This example shows the description of a proximity sensing capability with the following semantics. The sensor has an ID of "PXS001" and the maximum value shall be 10 (m) and the minimum value shall be 0 (m) with the resolution of 1 000 levels. The accuracy of the sensor is 0.01 (m). The offset of the sensor is 0.1 (m).

```
<cidl:SensorDeviceCapability      xsi:type="scdv:ProximitySensorCapabilityType"
id="PXS001" maxValue="10" minValue="0" numOfLevels="1000" offset="0.1">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability>
```

6.30 Body weight sensor capability type

6.30.1 General

This subclause specifies syntax and semantics of body weight sensor capabilities. This type supports the capabilities of the body weight sensor and the CoM sensor specified in ISO/IEC 23005-5.

6.30.2 XML representation syntax

```
<complexType name="BodyWeightSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType">
    </extension>
  </complexContent>
</complexType>
```

6.30.3 Binary representation syntax

BodyWeightSensorCapabilityType {	Number bits	Mnemonic
SensoryCapabilityBase		SensoryCapa bilityBaseType
}		

6.30.4 Semantics

Semantics of the BodyWeightSensorCapabilityType:

Name	Definition
BodyWeightSensorCapa bilityType	Tool for describing a body weight sensor capability.
maxValue	Describes the maximum value that the body weight sensor can perceive in the unit of kilograms.

6.30.5 Examples

This example shows the description of a body weight capability with the following semantics. The sensor has an ID of "BWSC001" and the maximum value shall be 200.0 (kg) with the resolution of 2 000 levels. The accuracy of the sensor is 0.01 (kg). The offset of sensor is 0.1 (kg)

```
<cidl:SensorDeviceCapability      xsi:type="scdv:BodyWeightSensorCapabilityType"
id="BWSC001" maxValue="200.0" numOfLevels="2000" offset="0.1">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.01"/>
</cidl:SensorDeviceCapability >
```

6.31 Engine oil temperature sensor capability type

6.31.1 General

This subclause specifies the capability description of the engine oil temperature sensors. The engine oil temperature sensor capability type is defined as an extension of Temperature Sensor Capability type.

6.31.2 Syntax

```
<complexType name="EngineOilTemperatureSensorCapabilityType">
  <complexContent>
    <extension base="scdv:TemperatureSensorCapabilityType"/>
  </complexContent>
</complexType>
```

6.31.3 Binary representation syntax

EngineOilTemperatureSensorCapabilityType {	Number of bits	Mnemonic
TemperatureSensorCapability		TemperatureSensorCapabilityType
}		

6.31.4 Semantics

Semantics of the EngineOilTemperatureSensorCapabilityType:

Name	Definition
EngineOilTemperatureSensorCapabilityType	Tool for describing capability of the engine oil temperature sensor.

6.31.5 Examples

This example shows the description of an engine oil temperature sensing capability with the following semantics. The sensor has an ID of "EOTS001" and the maximum value shall be 120 (°C) and the minimum value shall be -20 (°C) with the resolution of 1 400 levels. The accuracy of the sensor is 0.1 (°C). The offset of sensor is 1.0 (°C). The sensed information is received at the location of (1.00, 1.00, -1.00).

```

<cidl:SensorDeviceCapability
xsi:type="scdv:EngineOilTemperatureSensorCapabilityType" id="EOTS001"
maxValue="120" minValue="-20" numOfLevels="1400" offset="1.0" unit="celsius">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>

```

6.32 Intake air temperature sensor capability type

6.32.1 General

This subclause specifies a capability description of intake air temperature sensor. The intake air temperature sensor type is defined as an extension of Temperature Sensor type, and the intake air temperature sensor capability type is defined as an extension of temperature sensor capability type.

6.32.2 Syntax

```

<complexType name="IntakeAirTemperatureSensorCapabilityType">
  <complexContent>
    <extension base="scdv:TemperatureSensorCapabilityType"/>
  </complexContent>
</complexType>

```

6.32.3 Binary representation syntax

IntakeAirTemperatureSensorCapabilityType {	Number of bits	Mnemonic
TemperatureSensorCapability		TemperatureSensorCapabilityType
}		

6.32.4 Semantics

Semantics of the IntakeAirTemperatureSensorCapabilityType:

Name	Definition
IntakeAirTemperatureSensorCapabilityType	Tool for describing the intake air temperature sensor capability.

6.32.5 Examples

This example shows the description of an intake air temperature sensing capability with the following semantics. The sensor has an ID of "IATS001" and the maximum value shall be 120 (°C) and the minimum value shall be -20 (°C) with the resolution of 1 400 levels. The accuracy of the sensor is 0.1 (°C). The offset of sensor is 1.0 (°C). The sensed information is received at the location of (1.00, 1.00, -1.00).

```

<cidl:SensorDeviceCapability
xsi:type="scdv:IntakeAirTemperatureSensorCapabilityType"
  id="IATS001" maxValue="120" minValue="-20" numOfLevels="1400" offset="1.0"
  unit="celsius">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.1"/>
  <scdv:Location>
    <mpegvct:X>1.0</mpegvct:X>
    <mpegvct:Y>1.0</mpegvct:Y>
    <mpegvct:Z>-1.0</mpegvct:Z>
  </scdv:Location>
</cidl:SensorDeviceCapability>

```

6.33 Tire pressure monitor system sensor capability type

6.33.1 General

This subclause specifies a capability type of the tire pressure monitor system sensor.

6.33.2 Syntax

```

<complexType name="TirePressureMonitorSystemSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>

```

6.33.3 Binary representation syntax

TirePressureMonitorSystemSensorCapability Type {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.33.4 Semantics

Semantics of the TirePressureMonitorSystemSensorCapabilityType:

Name	Definition
TirePressureMonitorSystemSensorCapabilityType	Tool for describing capability of a tire pressure monitor system sensor.

6.33.5 Examples

This example shows the description of a tire pressure monitor system sensor capability with the following semantics. The sensor has an ID of "TPMS001" and the maximum value shall be 100 and the minimum value shall be 0 with the resolution of 200 levels. The accuracy of the sensor is 0.5, the offset of sensor is 0.

```

<cidl:SensorDeviceCapability
xsi:type="scdv:TirePressureMonitorSystemSensorCapabilityType"          id="TPMS001"
maxValue="100" minValue="0" numOfLevels="200" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>

```

6.34 Distance traveled sensor capability type

6.34.1 General

This subclause specifies a capability of the distance traveled sensor type which senses total distance traveled by the vehicle.

6.34.2 Syntax

```

<complexType name="DistanceTraveledSensorCapabilityType">
  <complexContent>
    <extension base="scdv:DistanceSensorCapabilityType"/>
  </complexContent>
</complexType>

```

6.34.3 Binary representation syntax

DistanceTraveledSensorCapabilityType {	Number of bits	Mnemonic
DistanceSensorCapability		DistanceSensorCapabilityType
}		

6.34.4 Semantics

Semantics of the DistanceTraveledSensorCapabilityType:

Name	Definition
DistanceTraveledSensorCapabilityType	Tool for describing capability of the sensor sensing the total distance traveled by a vehicle.

6.34.5 Examples

This example shows the description of a distance traveled sensor capability with the following semantics. The sensor has an ID of "DTS001" and the maximum value shall be 999999 and the minimum value shall be 0 with the resolution of 99999999 levels. The accuracy of the sensor is 0.005, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability xsi:type="scdv:DistanceTraveledSensorCapabilityType"
id="DTS001" maxValue="999999" minValue="0" numOfLevels="99999999" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.005"/>
</cidl:SensorDeviceCapability>
```

6.35 Speed sensor capability type

6.35.1 General

This subclause specifies a capability of the speed sensor which senses the speed without the notion of moving direction.

6.35.2 Syntax

```
<complexType name="SpeedSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.35.3 Binary representation syntax

SpeedSensorCapabilityType {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.35.4 Semantics

Semantics of the SpeedSensorCapabilityType:

Name	Definition
SpeedSensorCapabilityType	Tool for describing capability of the speed sensor, which does not specify any moving direction, unlike a velocity sensor.

6.35.5 Examples

This example shows the description of a speed sensor capability with the following semantics. The sensor has an ID of "SS001" and the maximum value shall be 100 and the minimum value shall be 0 with the resolution of 1 000 levels. The accuracy of the sensor is 0.05, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability xsi:type="scdv:SpeedSensorCapabilityType" id="SS001"
maxValue="100" minValue="0" numOfLevels="1000" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.05"/>
</cidl:SensorDeviceCapability>
```

6.36 Vehicle speed sensor capability type

6.36.1 General

This subclause specifies a capability of the vehicle speed sensor. The vehicle speed sensor capability type is defined as an extension of the speed sensor capability type.

6.36.2 Syntax

```
<complexType name="VehicleSpeedSensorCapabilityType">
  <complexContent>
    <extension base="scdv:SpeedSensorCapabilityType"/>
  </complexContent>
</complexType>
```

6.36.3 Binary representation syntax

VehicleSpeedSensorCapabilityType {	Number of bits	Mnemonic
SpeedSensorCapability		SpeedSensorCapabilityType
}		

6.36.4 Semantics

Semantics of the VehicleSpeedSensorCapabilityType:

Name	Definition
VehicleSpeedSensorCapabilityType	Tool for describing the capability of a vehicle speed sensor.

6.36.5 Examples

This example shows the description of a vehicle speed sensor capability with the following semantics. The sensor has an ID of "VSS001" and the maximum value shall be 300 and the minimum value shall be 0 with the resolution of 3 000 levels. The accuracy of the sensor is 0.05, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability      xsi:type="scdv:VehicleSpeedSensorCapabilityType"
id="VSS001" maxValue="300" minValue="0" numOfLevels="3000" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.05"/>
</cidl:SensorDeviceCapability>
```

6.37 Mass air flow sensor capability type

6.37.1 General

This subclause specifies the capability of a mass air flow sensor.

6.37.2 Syntax

```
<complexType name="MassAirFlowSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.37.3 Binary representation syntax

MassAirFlowSensorCapabilityType {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.37.4 Semantics

Semantics of the MassAirFlowSensorCapabilityType:

Name	Definition
MassAirFlowSensorCapabil ityType	Tool for describing capability of a mass air flow sensor.

6.37.5 Examples

This example shows the description of a mass air flow sensor capability with the following semantics. The sensor has an ID of "MAIS001" and the maximum value shall be 1 000 and the minimum value shall be 0 with the resolution of 1 000 levels. The accuracy of the sensor is 0.5, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability      xsi:type="scdv:MassAirFlowSensorCapabilityType"
id="MAIS001" maxValue="1000" minValue="0" numOfLevels="1000" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>
```

```
</cidl:SensorDeviceCapability>
```

6.38 Fuel level sensor capability type

6.38.1 General

This subclause specifies the capability of a fuel level sensor.

6.38.2 Syntax

```
<complexType name="FuelLevelSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.38.3 Binary representation syntax

FuelLevelSensorCapabilityType {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.38.4 Semantics

Semantics of the FuelLevelSensorCapabilityType:

Name	Definition
FuelLevelSensorType	Tool for describing the capability of a fuel level sensor, which gives values in percentage.

6.38.5 Examples

This example shows the description of a fuel level sensor capability with the following semantics. The sensor has an ID of "FLS001" and the maximum value shall be 100 and the minimum value shall be 0 with the resolution of 100 levels. The accuracy of the sensor is 0.5, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability xsi:type="scdv:FuelLevelSensorCapabilityType"
id="FLS001" maxValue="100" minValue="0" numOfLevels="100" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>
```

6.39 Manifold absolute pressure sensor capability type

6.39.1 General

This subclause specifies the capability of a manifold absolute pressure sensor.

6.39.2 Syntax

```
<complexType name="ManifoldAbsolutePressureSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.39.3 Binary representation syntax

ManifoldAbsolutePressureSensorCapabilityType {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.39.4 Semantics

Semantics of the ManifoldAbsolutePressureSensorCapabilityType:

Name	Definition
ManifoldAbsolutePressureSensorCapabilityType	Tool for describing the capability of a manifold absolute pressure sensor.

6.39.5 Examples

This example shows the description of a manifold absolute pressure sensor capability with the following semantics. The sensor has an ID of "MAPS001" and the maximum value shall be 1 000 and the minimum value shall be 0 with the resolution of 1 000 levels. The accuracy of the sensor is 0.5, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability
xsi:type="scdv:ManifoldAbsolutePressureSensorCapabilityType" id="MAPS001"
maxValue="1000" minValue="0" numOfLevels="1000" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>
```

6.40 EngineRPM sensor capability type

6.40.1 General

This subclause specifies the capability of an engine RPM sensor.

6.40.2 Syntax

```
<complexType name="EngineRPMSensorCapabilityType">
  <complexContent>
    <extension base="cidl:SensorCapabilityBaseType"/>
  </complexContent>
</complexType>
```

6.40.3 Binary representation syntax

EngineRPMSensorCapabilityType {	Number of bits	Mnemonic
SensorCapability		SensorCapabilityBaseType
}		

6.40.4 Semantics

Semantics of the EngineRPMSensorCapabilityType:

Name	Definition
EngineRPMSensorCapabilityType	Tool for describing the capability of an engine RPM sensor.

6.40.5 Examples

This example shows the description of an engine RPM sensor capability with the following semantics. The sensor has an ID of “ERPMS001” and the maximum value shall be 10 000 and the minimum value shall be 0 with the resolution of 10 000 levels. The accuracy of the sensor is 0.5, the offset of sensor is 0.

```
<cidl:SensorDeviceCapability      xsi:type="scdv:EngineRPMSensorCapabilityType"
id="ERPMS001" maxValue="10000" minValue="0" numOfLevels="10000" offset="0.0">
  <cidl:Accuracy xsi:type="cidl:ValueAccuracy" value="0.5"/>
</cidl:SensorDeviceCapability>
```

7 User's sensory preference vocabulary**7.1 General**

This Clause describes syntax and semantics of the user's sensory preference vocabulary which comprises the following effects:

- light, colored light, flash;
- heating, cooling;
- wind;
- vibration;
- scent;
- fog;
- sprayer;
- color correction;

- tactile;
- kinesthetic;
- rigid body motion;
- bubble.

NOTE SEPV has been designed in an extensible way and additional user preferences on sensory effects can be added easily.

7.2 Schema wrapper conventions

The syntax defined in this Clause assumes the following schema wrapper to form a valid XML schema document.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema"
xmlns:mpeg7="urn:mpeg:mpeg7:schema:2004" xmlns:mpegvct="urn:mpeg:mpeg-v:2016:01-
CT-NS" xmlns:cidl="urn:mpeg:mpeg-v:2016:01-CIDL-NS" xmlns:sepv="urn:mpeg:mpeg-
v:2016:01-SEPV-NS" targetNamespace="urn:mpeg:mpeg-v:2016:01-SEPV-NS"
elementFormDefault="qualified" attributeFormDefault="unqualified"
version="ISO/IEC 23005-2" id="MPEG-V-SEPV.xsd">
  <import namespace="urn:mpeg:mpeg7:schema:2004"
schemaLocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
7_schema_files/mpeg7-v2.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-CIDL-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/CIDL.xsd"/>
  <import namespace="urn:mpeg:mpeg-v:2016:01-CT-NS"
schemalocation="http://standards.iso.org/ittf/PubliclyAvailableStandards/MPEG-
V_schema_files/MPEG-V-CT.xsd"/>
```

Additionally, the following line should be appended to the resulting schema document in order to obtain a well-formed XML document.

```
</schema>
```

7.3 Light preference type

7.3.1 General

This subclause specifies syntax and semantics of user's preferences towards light or colored light effects.

7.3.2 XML representation syntax

```
<complexType name="LightPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <sequence>
        <element name="UnfavorableColor" type="mpegvct:colorType"
minOccurs="0" maxOccurs="unbounded"/>
      </sequence>
      <attribute name="maxIntensity" type="float" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

```

</complexContent>
</complexType>

```

7.3.3 Binary representation syntax

LightPrefType {	Number of bits	Mnemonic
UnfavorableColorFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(UnfavorableColorFlag){		
LoopUnfavorableColor		vluidsbf5
for(k=0;k< LoopUnfavorableColor;k++){		
UnfavorableColor[k]		ColorType
}		
}		
if(maxIntensityFlag){		
maxIntensity	32	fsbf
}		
if(unitFlag){		
Unit	8	bslbf
}		
}		

7.3.4 Semantics

Semantics of the `LightPrefType` type:

Name	Definition
<code>LightPrefType</code>	Tool for describing a user preference on light effect.
<code>UnfavorableColorFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0”

Name	Definition
	means the attribute shall not be used.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxIntensity	Describes the maximum desirable intensity of the light effect in terms of illumination with respect to [10 ⁻⁵ lux, 130 klux].
unit	Specifies the unit of the <code>maxIntensity</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
UnfavorableColor	Describes the list of user’s detestable colors, either as a reference to a classification scheme term or as RGB value. A CS that may be used for this purpose is the <code>ColorCS</code> defined in ISO/IEC 23005-6:—, A.2.2. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6. EXAMPLE <code>urn:mpeg:mpeg-v:01-SI-ColorCS-NS:alice_blue</code> would describe the color Alice blue.

7.3.5 Examples

This example shows the description of a user preference on light effect with the following semantics. The light effect is desired with the maximum intensity of 300 lux. A color, which is refused by user, is “alice_blue” from the classification scheme described in ISO/IEC 23005-6, A.2.2.

```
<cidl:USPreference xsi:type="sepv:LightPrefType" activate="true"
unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:lux" maxIntensity="300">
  <sepv:UnfavorableColor>
    urn:mpeg:mpeg-v:01-SI-ColorCS-NS:alice_blue
  </sepv:UnfavorableColor>
</cidl:USPreference>
```

7.4 Flash preference type

7.4.1 General

This subclause specifies syntax and semantics of user’s preferences towards flash effects.

7.4.2 XML representation syntax

```
<complexType name="FlashPrefType">
  <complexContent>
    <extension base="sepv:LightPrefType">
      <attribute name="maxFrequency" type="float" use="optional"/>
      <attribute name="freqUnit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

</complexType>

7.4.3 Binary representation syntax

FlashPrefType {	Number of bits	Mnemonic
maxFrequencyFlag	1	bslbf
freqUnitFlag	1	bslbf
LightPref		LightPrefType
if(maxFrequencyFlag){		
maxFrequency	32	fsbf
}		
if(freqUnitFlag){		
freqUnit	8	bslbf
}		
}		

7.4.4 Semantics

Semantics of the `FlashPrefType` type:

Name	Definition
<code>FlashPrefType</code>	Tool for describing a user preference on flash effect. It is extended from the <code>light</code> type.
<code>maxFrequencyFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>freqUnitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxFrequency</code>	Describes the maximum allowed number of flickering in times per second. EXAMPLE The value 10 means it will flicker 10 times for each second.
<code>freqUnit</code>	Specifies the unit of the <code>maxFrequency</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxFrequency</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.4.5 Examples

This example shows the description of a user preference on flash effect with the following semantics. The flash is desired with the maximum frequency of 50 times per second.

```
<cidl:USPreference xsi:type="sepv:FlashPrefType" activate="true"
maxFrequency="50" unit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:Hz"/>
```

7.5 Heating preference type

7.5.1 General

This subclause specifies syntax and semantics of user's preferences towards temperature (i.e. heating) effects.

7.5.2 XML representation syntax

```
<complexType name="HeatingPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="minIntensity" type="integer" use="optional"/>
      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.5.3 Binary representation syntax

HeatingPrefType {	Number of bits	Mnemonic
minIntensityFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(minIntensityFlag){		
minIntensity	8	uimsbf
}		
if(maxIntensityFlag){		
maxIntensity	16	uimsbf
}		
if(unitFlag){		
unit	8	bslbf
}		

}

7.5.4 Semantics

Semantics of the `HeatingPrefType` type:

Name	Definition
<code>HeatingPrefType</code>	Tool for describing a user preference on heating effect.
<code>minIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>maxIntensity</code>	Describes the highest desirable temperature of the heating effect with respect to the Celsius scale (or Fahrenheit).
<code>minIntensity</code>	Describes the lowest desirable temperature of the heating effect with respect to the Celsius scale (or Fahrenheit).
<code>unit</code>	Specifies the unit of the <code>maxIntensity</code> and <code>minIntensity</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.5.5 Examples

This example shows a description of a user preference on heating effect with the following semantics. The identifier for this preference description is "heater001". The heating is desired with the maximum intensity of up to 50 °C, and minimum intensity of 20 °C. When the given command on the heating effect is not within the range of preference or capability, it should be properly scaled.

```
<cidl:USPreference xsi:type="sepv:HeatingPrefType" id="heater001"
maxIntensity="50" minIntensity="20" adaptationMode="scalable"
activate="true"/>
```

7.6 Cooling preference type

7.6.1 General

This subclause specifies syntax and semantics of user's preferences towards temperature (i.e. cooling) effects.

7.6.2 XML representation syntax

```
<complexType name="CoolingPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
```

```

    <attribute name="minIntensity" type="integer" use="optional"/>
    <attribute name="maxIntensity" type="integer" use="optional"/>
    <attribute name="unit" type="mpegvct:unitType" use="optional"/>
  </extension>
</complexContent>
</complexType>

```

7.6.3 Binary representation syntax

CoolingPrefType {	Number of bits	Mnemonic
minIntensityFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(minIntensityFlag){		
minIntensity	16	simsbf
}		
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.6.4 Semantics

Semantics of the CoolingPrefType type:

Name	Definition
CoolingPrefType	Tool for describing a user preference on cooling effect.
minIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
maxIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.

Name	Definition
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxIntensity	Describes the lowest desirable temperature of the cooling effect with respect to the Celsius scale (or Fahrenheit).
minIntensity	Describes the highest desirable temperature of the cooling effect with respect to the Celsius scale (or Fahrenheit).
unit	Specifies the unit of the maxIntensity and minIntensity value as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.

7.6.5 Examples

This example shows a description of a user preference on cooling effect with the following semantics. The identifier for this preference description is “cooling001”. The cooling is desired with the maximum intensity of up to 10 °C, and minimum intensity of 30 °C. When the given command on the cooling effect is not within the range of preference or capability, it should be properly scaled.

```
<cidl:USPreference xsi:type="sepv:CoolingPrefType" id="cooling001"
maxIntensity="10" minIntensity="30" adaptationMode="scalable"
activate="true"/>
```

7.7 Wind preference type

7.7.1 General

This subclause specifies syntax and semantics of user’s preferences towards wind effects.

7.7.2 XML representation syntax

```
<complexType name="WindPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.7.3 Binary representation syntax

WindPrefType {	Number of bits	Mnemonic
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf

WindPrefType {	Number of bits	Mnemonic
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.7.4 Semantics

Semantics of the `WindPrefType` type:

Name	Definition
<code>WindPrefType</code>	Tool for describing a user preference on a wind effect.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensity</code>	Describes the maximum desirable intensity of the wind effect in terms of strength with respect to the Beaufort scale.
<code>unit</code>	Specifies the unit of the <code>maxIntensity</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.7.5 Examples

This example shows a description of a user preference on wind effect with the following semantics. The identifier for this preference description is “wind01”. The wind is desired with the maximum intensity of up to 4 Beaufort. When the given command on the wind effect is not within the range of preference or capability, it should be clipped.

```
<cid1:USPreference xsi:type="sepv:WindPrefType" id="wind01" maxIntensity="4"
activate="true" adaptationMode="strict"/>
```

7.8 Vibration preference type

7.8.1 General

This subclause specifies syntax and semantics of user's preferences towards vibration effects.

7.8.2 XML representation syntax

```
<complexType name="VibrationPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.8.3 Binary representation syntax

VibrationPrefType {	Number of bits	Mnemonic
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.8.4 Semantics

Semantics of the `VibrationPrefType` type:

Name	Definition
<code>VibrationPrefType</code>	Tool for describing a user preference on vibration effect.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0"

Name	Definition
	means the attribute shall not be used.
maxIntensity	Describes the maximum desirable intensity of the vibration effect in terms of strength with respect to Hertz.
unit	Specifies the unit of the maxIntensity value as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6, A.2.1, if a unit other than the default unit specified in the semantics of the maxIntensity is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.

7.8.5 Examples

This example shows a description of a user preference on vibration effect with the following semantics. The identifier for this preference description is "vibe02". The vibration is desired with the maximum intensity of up to 600 Hz. When the given command on the vibration effect is not within the range of preference or capability, it should be properly scaled with the maximum of 600 Hz, if the maximum intensity defined in the device capability is greater than 600.

```
<cidl:USPreference xsi:type="sepv:VibrationPrefType" id="vibe02"
maxIntensity="600" activate="true" adaptationMode="scalable"/>
```

7.9 Scent preference type

7.9.1 General

This subclause specifies syntax and semantics of user's preferences towards scent effects.

7.9.2 XML representation syntax

```
<complexType name="ScentPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <sequence>
        <element name="HedonicScent" type="mpeg7:termReferenceType"

      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.9.3 Binary representation syntax

ScentPrefType {	Number of bits	Mnemonic
HedonicScentFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(HedonicScentFlag){		
LoopHedonicScent		vluimsbf5
for(k=0;k< LoopHedonicScent;k++){		
HedonicScent[k]	9	blsbf
}		
}		
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.9.4 Semantics

Semantics of the ScentPrefType type:

Name	Definition
ScentPrefType	Tool for describing a user preference on scent effect.
HedonicScentFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxIntensityFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
unitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.

Name	Definition
LoopHedonicScent	This field, which is only present in the binary representation, specifies the number of HedonicScent contained in the description.
HedonicScent	Describes the list of user's pleasant or unpleasant scent. A CS that may be used for this purpose is the ScentCS defined in ISO/IEC 23005-6:—, A.2.4. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
maxIntensity	Describes the maximum desirable intensity of the scent effect in terms of millilitre per hour.
unit	Specifies the unit of the maxIntensity value as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the maxIntensity is used. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.

7.9.5 Examples

This example shows a description of a user preference on scent effect with the following semantics. The identifier for this preference description is "scent001". The scent effect is desired with the maximum intensity of up to 4 ml/h. When the given command on the scent effect is not within the range of preference or capability, it should be properly scaled with the maximum of 4 ml/h, if the maximum intensity defined in the device capability is greater than 4. Also, it specifies that the scent of rose as defined in ScentCS of ISO/IEC 23005-6 is not desired.

```
<cidl:USPreference xsi:type="sepv:ScentPrefType" id="scent001"
maxIntensity="4" adaptationMode="scalable">
  <sepv:HedonicScent>
    urn:mpeg:mpeg-v:01-SI-ScentCS-NS:rose
  </sepv:HedonicScent>
</cidl:USPreference>
```

7.10 Fog preference type

7.10.1 General

This subclause specifies syntax and semantics of user's preferences towards fog effects.

7.10.2 XML representation syntax

```
<complexType name="FogPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.10.3 Binary representation syntax

FogPrefType {	Number of bits	Mnemonic
---------------	----------------	----------

maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.10.4 Semantics

Semantics of the `FogPrefType` type:

Name	Definition
<code>FogPrefType</code>	Tool for describing a preference on fog effect.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensity</code>	Describes the maximum desirable intensity of the fog effect in terms of millilitre per hour.
<code>unit</code>	Specifies the unit of the <code>maxIntensity</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.10.5 Examples

This example shows a description of a user preference on fog effect with the following semantics. The identifier for this preference description is “fogfog”. The fog effect is desired with the maximum intensity of up to 5 ml/h. When the given command on the fog effect is not within the range of preference or capability, it should be properly scaled with the maximum of 5 ml/h, if the maximum intensity defined in the device capability is greater than 5.

```
<cidl:USPreference xsi:type="sepv:FogPrefType" id="fogfog" maxIntensity="5"
adaptationMode="scalable"/>
```

7.11 Spraying preference type

7.11.1 General

This subclause specifies syntax and semantics of user's preferences towards sprayer effects.

7.11.2 XML representation syntax

```
<complexType name="SprayingPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="sprayingType" type="mpeg7:termReferenceType"/>
      <attribute name="maxIntensity" type="integer" use="optional"/>
      <attribute name="unit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.11.3 Binary representation syntax

SprayingPrefType{	Number of bits	Mnemonic
sprayingFlag	1	bslbf
maxIntensityFlag	1	bslbf
unitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(sprayingFlag){		
spraying		SprayingType
}		
if(maxIntensityFlag){		
maxIntensity	16	simsbf
}		
if(unitFlag){		
unit	8	bslbf
}		
}		

7.11.4 Semantics

Semantics of the `SprayingPrefType` type:

Name	Definition
<code>SprayingPrefType</code>	Tool for describing a user preference on spraying effect.
<code>sprayingFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>maxIntensityFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>unitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
<code>sprayingType</code>	Describes the type of the sprayed material as a reference to a classification scheme term. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6. A CS that may be used for this purpose is the <code>SprayingTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.7.
<code>maxIntensity</code>	Describes the maximum desirable intensity of the spraying effect in terms of millilitre per hour.
<code>unit</code>	Specifies the unit of the <code>maxIntensity</code> value as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1, if a unit other than the default unit specified in the semantics of the <code>maxIntensity</code> is used. The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.11.5 Examples

This example shows a description of a user preference on spraying effect with the following semantics. The identifier for this preference description is “letspray”. The spraying effect is desired with the maximum intensity of up to 4 ml/h. When the given command on the spraying effect is not within the range of preference or capability, it should be properly scaled with the maximum of 4 ml/h, if the maximum intensity defined in the device capability is greater than 4. The desired material to be sprayed is purified water, as defined in the `SprayingTypeCS` defined in ISO/IEC 23005-6:—, A.2.7.

```
<cidl:USPreference xsi:type="sepv:SprayingPrefType" id="letspray"
maxIntensity="4" sprayingType="urn:mpeg:mpeg-v:01-SI-SprayingTypeCS-NS:water"/>
```

7.12 Color correction preference type

7.12.1 General

This subclause specifies syntax and semantics of user's preferences towards color correction effects.

7.12.2 XML representation syntax

```
<complexType name="ColorCorrectionPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType"/>
  </complexContent>
</complexType>
```

7.12.3 Binary representation syntax

ColorCorrectionPrefType {	Number of bits	Mnemonic
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
}		

7.12.4 Semantics

Semantics of the ColorCorrectionPreferenceType type:

Name	Definition
ColorCorrectionPrefType	Specifies whether the user prefers to use color correction functionality of the device or not by using activate attribute. Any information given by other attributes is ignored.

7.12.5 Examples

This example shows the description of a user preference on color correction effect with the following semantics. The color collection effect is desired by user simply by activating it "true".

```
<cidl:USPreference xsi:type="sepv:ColorCorrectionPrefType" activate="true"/>
```

7.13 Tactile preference type

7.13.1 General

This subclause specifies syntax and semantics of user's preferences towards tactile effects.

7.13.2 XML representation syntax

```
<complexType name="TactilePrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <attribute name="maxTemperature" type="float" use="optional"/>
      <attribute name="minTemperature" type="float" use="optional"/>
      <attribute name="maxCurrent" type="float" use="optional"/>
      <attribute name="maxVibration" type="float" use="optional"/>
      <attribute name="tempUnit" type="mpegvct:unitType" use="optional"/>
      <attribute name="currentUnit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

```

    <attribute name="vibrationUnit" type="mpegvct:unitType"
        use="optional"/>
    </extension>
    </complexContent>
</complexType>

```

7.13.3 Binary representation syntax

TactilePrefType {	Number of bits	Mnemonic
maxTemperatureFlag	1	bslbf
minTemperatureFlag	1	bslbf
maxCurrentFlag	1	bslbf
maxVibrationFlag	1	bslbf
tempUnitFlag	1	bslbf
currentUnitFlag	1	bslbf
vibrationUnitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(maxTemperatureFlag){		
maxTemperature	32	fsbf
}		
if(minTemperatureFlag){		
minTemperature	32	fsbf

if(maxCurrentFlag){		
maxCurrent	32	fsbf
}		
if(maxVibrationFlag){		
maxVibration	32	fsbf
}		
if(tempUnitFlag){		
tempUnit	8	bslbf
}		
if(currentUnitFlag){		

TactilePrefType {	Number of bits	Mnemonic
currentUnit	8	bslbf
}		
if(vibrationUnitFlag){		
vibrationUnit	8	bslbf
}		
}		

7.13.4 Semantics

Semantics of the TactilePrefType:

Name	Definition
TactilePrefType	Tool for describing a user preference on tactile effect.
maxTemperatureFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
minTemperatureFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxCurrentFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxVibrationFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
tempUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
currentUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
vibrationUnitFlag	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of “1” means the attribute shall be used and “0” means the attribute shall not be used.
maxTemperature	Describes the maximum desirable temperature regarding how hot the tactile effect may be achieved. (Celsius)
minTemperature	Describes the minimum desirable temperature regarding how cold the tactile effect may be achieved.(Celsius)
maxCurrent	Describes the maximum desirable electric current. (mA).

Name	Definition
maxVibration	Describes the maximum desirable vibration. (mm).
tempUnit	Specifies the unit of the intensity, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. If the unit is not specified, the default unit is Celsius. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
currentUnit	Specifies the unit of the intensity, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. If the unit is not specified, the default unit is milli-ampere. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.
vibrationUnit	Specifies the unit of the intensity, as a reference to a classification scheme term provided by UnitTypeCS defined in ISO/IEC 23005-6:—, A.2.1. The reference to the classification scheme shall be done using the mpeg7:termReferenceType defined in ISO/IEC 15938-5:2003, 7.6.

7.13.5 Examples

An example of the TactilePrefType to indicate the preference of tactile sensory effect is given. For the case of thermal display maximum temperature is 45° in Celsius and minimum temperature is 10° in Celsius. Also, maximum electric current less than 30 mA is preferred and maximum vibration not exceeding 0.1 mm is preferred.

```
<cidl:USPreference xsi:type="sepv:TactilePrefType" maxTemperature="45"
minTemperature="10" maxCurrent="30" maxVibration="0.1"
tempUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:celsius"
currentUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:milliampere"
vibrationUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:mm"/>
```

7.14 Kinesthetic preference type

7.14.1 General

This subclause specifies syntax and semantics of user's preferences towards kinesthetic effects.

7.14.2 XML representation syntax

```
<complexType name="KinestheticPrefType">
  <complexContent>
    <extension base="cidl:UserSensoryPreferenceBaseType">
      <sequence>
        <element name="MaxForce" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
        <element name="MaxTorque" type="mpegvct:Float3DVectorType"
          minOccurs="0"/>
      </sequence>
      <attribute name="forceUnit" type="mpegvct:unitType" use="optional"/>
      <attribute name="torqueUnit" type="mpegvct:unitType" use="optional"/>
    </extension>
  </complexContent>
</complexType>
```

7.14.3 Binary representation syntax

KinestheticPrefType {	Number of bits	Mnemonic
MaxForceFlag	1	bslbf
MaxTorqueFlag	1	bslbf
forceUnitFlag	1	bslbf
torqueUnitFlag	1	bslbf
UserSensoryPreferenceBase		UserSensoryPreferenceBaseType
if(MaxForceFlag){		
MaxForce		Float3DVectorType
}		
if(MaxTorqueFlag){		
MaxTorque		Float3DVectorType
}		
if(forceUnitFlag) {		
forceUnit	8	bslbf
}		
if(torqueUnitFlag) {		
torqueUnit	8	bslbf
}		
}		
Float3DVectorType {		
X	32	fsbf
Y	32	fsbf
Z	32	fsbf
}		

7.14.4 Semantics

Semantics of the `KinestheticPrefType`:

Name	Definition
<code>KinestheticPrefType</code>	Tool for describing a user preference on Kinesthetic effect (forcefeedback effect).
<code>MaxForceFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>MaxTorqueFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>forceUnitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>torqueUnitFlag</code>	This field, which is only present in the binary representation, signals the presence of the activation attribute. A value of "1" means the attribute shall be used and "0" means the attribute shall not be used.
<code>MaxForce</code>	Describes the maximum desirable force for each direction of three-dimensional axis (x, y and z). (N).
<code>MaxTorque</code>	Describes the maximum desirable torque for each direction of three-dimensional axis (x, y and z). (N-mm).
<code>forceUnit</code>	Specifies the unit of the intensity, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1. If the unit is not specified, the default unit is Newton (N). The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.
<code>torqueUnit</code>	Specifies the unit of the intensity, as a reference to a classification scheme term provided by <code>UnitTypeCS</code> defined in ISO/IEC 23005-6:—, A.2.1. If the unit is not specified, the default unit is Newton millimetre (N-mm). The reference to the classification scheme shall be done using the <code>mpeg7:termReferenceType</code> defined in ISO/IEC 15938-5:2003, 7.6.

7.14.5 Examples

This example of the `KinestheticPrefType` indicates the preference of kinesthetic sensory effect. In this example, a maximum force is considered with values of forces on each axis ($F_x=5.0\text{N}$, $F_y=3.0\text{N}$, $F_z=3.5\text{N}$).

```
<cidl:USPreference xsi:type="sepv:KinestheticPrefType"
forceUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:Newton"
torqueUnit="urn:mpeg:mpeg-v:01-CI-UnitTypeCS-NS:Nmm">
  <sepv:MaxForce>
    <mpegvct:X>5.0</mpegvct:X>
    <mpegvct:Y>3.0</mpegvct:Y>
    <mpegvct:Z>3.5</mpegvct:Z>
  </sepv:MaxForce>
</cidl:USPreference>
```

7.15 RigidBodyMotion preference type

7.15.1 General

This subclause specifies syntax and semantics of user's preferences towards rigid body motion effects.

7.15.2 XML representation syntax

```
<complexType name="RigidBodyMotionPrefType">
