# Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 1025 was developed by Technical Committee ISO/TC 72, *Textile machinery and allied machinery and accessories*, and was circulated to the member bodies in July 1978.

It has been approved by the member bodies of the following countries :

|                     |                       |                |
|---------------------|-----------------------|----------------|
| Belgium             | Japan                 | Switzerland    |
| Czechoslovakia      | Mexico                | Turkey         |
| Egypt, Arab Rep. of | Poland                | United Kingdom |
| France              | Romania               | USSR           |
| Germany, F. R.      | South Africa, Rep. of |                |
| Ireland             | Spain                 |                |

The member body of the following country expressed disapproval of the document on technical grounds :

Bulgaria

This International Standard cancels and replaces ISO Recommendation R 1025-1969, of which it constitutes a technical revision.

# Textile machinery and accessories — Sectional beams for warp knitting machines — Terminology and main dimensions

## 1 Scope and field of application

This International Standard defines the basic terms for sectional beams for warp knitting machines and lays down the main dimensions as well as the maximum values of variation of form and position for the main elements of these beams. For cases where a limit for the residual unbalance must be fixed, a recommendation is made for the choice of quality grade.
