Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10669 was prepared by Technical Committee ISO/TC 2, *Fasteners*.

Plain washers for tapping screw and washer assemblies — Normal and large series — Product grade A

1 Scope

This International Standard specifies the characteristics of plain steel washers of product grade A for tapping screw and washer assemblies in accordance with ISO 10510.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

3 Classification

Washers of product grade A for tapping screw and washer assemblies are classified into two types:

- Type N: Normal series;
- Type L: Large series.

4 Dimensions

4.1 Type N, normal series

See Figure 1 and Table 1.

5 Specifications and reference International Standards

See Table 3.

Table 3

Material ^a		Steel ^b
Mechanical properties ^c	Hardness class	180 HV
	Hardness range ^d	180 HV to 300 HV
Tolerances	Product grade	A ^e
	International Standard	ISO 4759-3
Surface finish		Plain, i.e. washers to be supplied in natural finish, treated with a protective lubricant or with other coatings as agreed between customer and supplier. Requirements for electroplating are covered in ISO 4042. All tolerances shall apply prior to the application of a plating or coating.
Workmanship		Parts shall be free of irregularities or detrimental defects. No protruding burrs shall appear on the washer.
Acceptability		For the acceptance procedure see ISO 3269.
^a Other materials as agreed between customer and supplier. ^b The carbon content shall not exceed 0,12 %. ^c The mechanical properties are for the as delivered condition only. They may change when the screw and washer assembly is hardened and tempered. ^d Hardness testing according to ISO 6507-1. Test force: HV 10 for nominal thickness $h \leq 1,2$ mm HV 30 for nominal thickness $h > 1,2$ mm ^e Product grade A does not apply to the tolerance of the clearance hole d_1 and the thickness h.		

6 Designation

EXAMPLE A plain steel washer for tapping screw and washer assemblies, normal series, of nominal size 4,2 mm and hardness class 180 HV is designated as follows:

Washer ISO 10669 - N - 4,2 - 180 HV
