Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 10935 was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 5, *Microscopes and endoscopes*.

This second edition cancels and replaces the first edition (ISO 10935:1996), which has been technically revised.

Microscopes — Interfacing connection type C

1 Scope

This International Standard specifies the dimensions of a thread mount connection type C for a microscope imaging exit port (other than a monocular or binocular viewing tube) and the position of the image plane.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 263:1973, *ISO inch screw threads — General plan and selection for screws, bolts and nuts — Diameter range 0,06 to 6 in*

ISO 10934-1, *Optics and optical instruments — Vocabulary for microscopy — Part 1: Light microscopy*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 10934-1 and the following apply.

3.1

male component

imaging exit port of a microscope on to which a camera or other optical detecting device is mounted

3.2

female component

fitting of the camera or other optical detecting device into which the microscope exit port is inserted

4 Requirements

The dimensions of the male component shall be as shown in Figure 1; the dimensions of the female component shall be as shown in Figure 2.

The position of the image plane shall be as shown in Figure 1 and Figure 2.

Dimensions in millimetres

**Key**

1 image plane

^a In accordance with ISO 263.^b Open.

NOTE The distance 17,53 mm is measured in air.

Figure 1 — Dimensions of male component and position of the image plane

Dimensions in millimetres

**Key**

1 image plane

^a In accordance with ISO 263.

NOTE The distance 17,53 mm is measured in air.

Figure 2 — Dimensions of female component and position of the image plane
