Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 35, *Paints and varnishes*, Subcommittee SC 12, *Preparation of steel substrates before application of paints and related products*.

This second edition cancels and replaces the first edition (ISO 11126-10:2000), which has been technically revised.

A list of all parts in the ISO 11126 series can be found on the ISO website.

Preparation of steel substrates before application of paints and related products — Specifications for non-metallic blast-cleaning abrasives —

Part 10: Almandite garnet

WARNING — Equipment, materials and abrasives used for surface preparation can be hazardous. It is the responsibility of the user to establish appropriate safety and health practices. Reference should be made to appropriate documentation on safe handling and disposal after use for those materials and abrasives that are considered to be hazardous, such as free silica or carcinogenic or toxic substances.

1 Scope

This document specifies requirements for almandite garnet abrasives, as supplied for blast-cleaning. It specifies ranges of particle sizes and values for apparent density, Mohs hardness, moisture content, conductivity of aqueous extract and water-soluble chlorides.

The requirements specified in this document apply to abrasives supplied in the “new” condition only. They do not apply to abrasives either during or after use.

Test methods for non-metallic blast-cleaning abrasives are given in the various parts of ISO 11127.

NOTE Although this document has been developed specifically to meet requirements for preparation of steelwork, the properties specified are generally appropriate for use when preparing other material surfaces, or components, using blast-cleaning techniques. These techniques are described in ISO 8504-2.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 11127-7, *Preparation of steel substrates before application of paints and related products — Test methods for non-metallic blast-cleaning abrasives — Part 7: Determination of water-soluble chlorides*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1
almandite garnet
material manufactured from the naturally occurring mineral garnet which is dried and sieved, with or without mechanical crushing, and prepared for use as a blast-cleaning abrasive

Note 1 to entry: Almandite garnet is an iron aluminium silicate with the chemical formula $\text{Fe}_3\text{Al}_2(\text{SiO}_4)_3$.

Note 2 to entry: Other forms of garnet, such as andradite garnet, which is a calcium iron silicate with the chemical formula $\text{Ca}_3\text{Fe}_2(\text{SiO}_4)_3$, exist but these garnet abrasives are not covered by this document.

4 Designation of abrasives

Almandite garnet abrasives shall be identified by “Abrasive ISO 11126” and the abbreviation N/GA indicating non-metallic, almandite garnet abrasive. This shall be followed, without spaces, by an oblique stroke and then by the symbol G to indicate the required particle shape of the abrasive, when purchased, as grit. The designation shall be completed by values denoting the particle size range, in millimetres, required (see Table 1).

EXAMPLE **Abrasive ISO 11126 N/GA/G 0,2 - 0,6** denotes an abrasive of the non-metallic almandite garnet type, complying with the requirements of this document, of initial particle shape grit and particle size range 0,2 mm to 0,6 mm.

It is essential that this full product designation is quoted on all orders.

Table 1 — Particle size distribution

Particle size range ^a , mm		0,08 to 0,18	0,180 to 0,355	0,20 to 0,60	0,35 to 0,85	0,85 to 1,40	1,40 to 2,36
Oversize	Sieve size, mm	0,18	0,355	0,60	0,85	1,4	2,36
	Residue, % mass fraction, max.	10	10	10	10	10	10
Nominal size	Sieve size, mm	0,08	0,180	0,20	0,35	0,85	1,40
	Residue, % mass fraction, min.	85	85	85	85	85	85
Undersize	Sieve size, mm	0,08	0,180	0,20	0,35	0,85	1,40
	Through-flow, % mass fraction, max.	5	5	5	5	5	5

^a By agreement between the interested parties, abrasives of different particle size ranges may be mixed together. Details of proportions of nominal size, oversize and undersize shall be specified. The maximum particle size shall not exceed 3,15 mm.

5 Sampling

Sampling procedures shall be as specified in ISO 11127-1.

6 Requirements

6.1 General requirements

Almandite garnet abrasives are natural mineral grains that absorb no water but may be wetted on the surface only.

Silica in almandite garnet abrasives shall be present as bound silicate. The content of free crystalline silica (such as quartz, tridimite or cristobalite) shall not exceed a mass fraction of 1,0 %, as determined by X-ray diffraction.

The material shall be free from corrosive constituents and adhesion-impairing contaminants.

NOTE Almandite garnet abrasives as supplied have a predominantly angular shape. More spherical particle shapes are not excluded as their effect on the surface profile obtained corresponds generally to that produced by angular abrasive particles.

6.2 Particular requirements

Particular requirements for almandite garnet abrasives shall be as specified in [Table 2](#).

Table 2 — Particular requirements for almandite garnet abrasives

Property	Requirement	Test method
Particle size range and distribution	See Table 1	ISO 11127-2
Apparent density kg/m ³ (kg/dm ³)	(4,0 to 4,2) × 10 ³ (4,0 to 4,2)	ISO 11127-3
Mohs hardness ^a	min. 6	ISO 11127-4
Moisture, % mass fraction	max. 0,2	ISO 11127-5
Conductivity of aqueous extract, µS/cm	max. 250	ISO 11127-6
Water-soluble chlorides, % mass fraction	max. 0,002 5	ISO 11127-7
^a Another method for assessing hardness may be used, together with an appropriate minimum requirement, by agreement between the interested parties.		

7 Identification and marking

The product shall be clearly marked or identified using the appropriate designation as specified in [Clause 4](#), either directly or by the accompanying delivery note.

8 Information to be provided by the manufacturer or supplier

The manufacturer or supplier shall provide, if requested, a test report detailing results for any relevant property as determined by the appropriate method specified in [Table 2](#).
