Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 16366 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 8, *Tools for pressing and moulding*.

This second edition cancels and replaces the first edition (ISO 16366:2001), Clause 3 of which has been technically revised.

Tools for pressing — L-shaped guides

1 Scope

This International Standard specifies the main dimensions and tolerances of L-shaped guiding bars, to be used in press tools (an application example is shown in Figure 1).

It also specifies the designation of L-shaped guiding bars.

Key

- 1 L-shaped guiding bars
- 2 sliding plates
- 3 press tool

Figure 1 — Application example of L-shaped guiding bars

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 2768-1, *General tolerances — Part 1: Tolerances for linear and angular dimensions without individual tolerance indications*

ISO 4762, *Hexagon socket head cap screws*

ISO 8733, *Parallel pins with internal thread, of unhardened steel and austenitic stainless steel*

ISO 13715, *Technical drawings — Edges of undefined shape — Vocabulary and indications*

3 Dimensions

The dimensions of L-shaped guiding bars shall conform to the indications in Figure 2 and Table 1.

All edges of undefined shape shall be in accordance with ISO 13715.

General tolerance: ISO 2768m
dimensions in millimetres
surface roughness values in micrometers

		400					82,5	75		370				5		2

4 Material

The choice of material is left to the manufacturer's discretion.

EXAMPLE Bronze with embedded solid lubricant.

5 Designation

L-shaped guiding bars in accordance with this International Standard shall be designated by:

- "L-shaped guiding bar";
- reference to this International Standard, i.e. ISO 16366;
- the length, l_1 , in millimetres;
- the height, h_1 , in millimetres.

EXAMPLE An L-shaped guiding bar of length $l_1 = 100$ mm and of height $h_1 = 55$ mm, is designated as follows:

L-shaped guiding bar ISO 16366 — 100 × 55

Bibliography

- [1] ISO 23480, *Tools for pressing — Sliding plates*
