ISO 17208-1

Underwater acoustics — Quantities and procedures for description and measurement of underwater sound from ships —

Part 1: Requirements for precision measurements in deep water used for comparison purposes

AMENDMENT 1

*Acoustique sous-marine — Grandeurs et modes de description et
de mesurage de l'acoustique sous-marine des navires —*

*Partie 1: Exigences pour les mesurages en eau profonde utilisées
pour des besoins de comparaison*

AMENDEMENT 1

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 43, *Acoustics*, Subcommittee SC 3, *Underwater acoustics*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Underwater acoustics — Quantities and procedures for description and measurement of underwater sound from ships —

Part 1:

Requirements for precision measurements in deep water used for comparison purposes

AMENDMENT 1

Scope, last paragraph

Add the following sentence at the end of the paragraph:

"The procedure for that purpose is described in ISO 17208-2."

Normative references

Replace "ISO 18405—¹⁾" with "ISO 18405" and delete footnote (1).

Replace "IEC 61260" by "IEC 61260-1".

3.21

Replace the definition of radiated noise level with the following:

level of the product of the distance from a ship reference point of a sound source, d , and the far field root-mean-square sound pressure, $p_{\text{rms}}(d)$, at that distance for a specified reference value in deep water

In Note 1 to entry and Note 4 to entry, replace the symbol LRN by L_{RN} .

Add the following text after Note 5 to entry:

Note 6 to entry: Deep water is any location where the water depth is in accordance with the minimum test site requirements (see 5.2).

4.3, first paragraph

Replace the last sentence by the following:

"All frequency-domain averaging shall be linear in power, with sampling consistent with the data window period (DWP), see 6.1."

4.3, third paragraph

Replace the first sentence by the following:

"The broadband processing shall cover the one-third octave (base 10) bands from 10 Hz to 20 000 Hz, Class 1. According to ISO 18405, an alternative name for one-third octave (base 10) is decidecade."

5.5, Figure 3

Replace the label of key 11 by the following:

"11 Williamson turn"

Bibliography

Add the following International Standard at the end of Bibliography:

"[12] ISO 17208-2, *Underwater acoustics — Quantities and procedures for description and measurement of underwater sound from ships — Part 2: Determination of source levels from deep water measurements*"
