Descriptors : tools, hand tools, assembly tools, tool bits, hexagonal shape, dimensions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 3109 was prepared by Technical Committee ISO/TC 29, *Small tools*. It was first published in 1974. This second edition cancels and replaces the first, the table of which has been altered.

Assembly tools for screws and nuts — Hexagon insert bits for hexagon socket head screws

1 Scope and field of application

This International Standard specifies dimensions for hexagon insert bits for hexagon socket head screws in accordance with ISO 1173.

Hexagon insert bits for hexagon socket head screws are registered under numbers 115 and 307 in ISO 1703.
