UDC 669.721.5

Ref. No. ISO 3116-1981 (E)

Descriptors : magnesium alloys, chemical composition, mechanical properties, tensile strength.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 3116 was developed by Technical Committee ISO/TC 79, *Light metals and their alloys*, and was circulated to the member bodies in May 1980.

It has been approved by the member bodies of the following countries :

Brazil	Italy	South Africa, Rep. of
Canada	Japan	Spain
China	Korea, Dem. P. Rep. of	Sweden
Egypt, Arab Rep. of	Korea, Rep. of	United Kingdom
France	Netherlands	USSR
Germany, F.R.	Norway	
Ireland	Romania	

The member body of the following country expressed disapproval of the document on technical grounds :

USA

This second edition cancels and replaces the first edition (i.e. ISO 3116-1974).

Wrought magnesium alloys — Chemical composition and mechanical properties

1 Scope and field of application

This International Standard specifies

- the chemical composition and the minimum mechanical properties of semi-finished products in magnesium-zinc-zirconium alloys;
- the chemical composition and the minimum mechanical properties of semi-finished products in magnesium-aluminium-zinc alloys.

2 References

ISO/R 190, *Tensile testing of light metals and their alloys*.¹⁾

ISO/R 952, *Tensile testing of light metal and light metal alloy tubes*.¹⁾

ISO 2092, *Light metals and their alloys — Code of designation based on chemical symbols*.

ISO/R 2107, *Light metals and their alloys — Temper designations*.

3 Requirements

3.1 Chemical composition

3.1.1 The chemical composition of semi-finished products in magnesium-zinc-zirconium alloys shall be as given in table 1.

3.1.2 The chemical composition of semi-finished products in magnesium-aluminium-zinc alloys shall be as given in table 2.

Table 1

Alloy*	Chemical composition, %				
	Alloying elements		Impurities max.		Total other impurities max.
	Zn	Zr	Cu	Ni	
Mg-Zn6Zr	4,8 to 6,2	0,45 to 0,8	0,03	0,005	0,30
Mg-Zn3Zr	2,5 to 4,0	0,4 to 0,8	0,03	0,005	0,30
Mg-Zn1Zr	0,75 to 1,5	0,4 to 0,8	0,03	0,005	0,30

* For designations, see ISO 2092.

Table 2

Alloy*	Chemical composition, %							
	Alloying elements			Impurities max.				
	Al	Zn	Mn	Si	Cu	Fe	Ni	Ca
Mg-Al3Zn1Mn	2,5 to 3,5	0,5 to 1,5	≥ 0,2	0,1	0,1	0,03	0,005	0,04
Mg-Al6Zn1Mn	5,5 to 7,2	0,5 to 1,5	0,15 to 0,4	0,1	0,1	0,03	0,005	
Mg-Al8ZnMn	7,5 to 9,2	0,2 to 1,0	0,1 to 0,4	0,1	0,05	0,005	0,005	

* For designations, see ISO 2092.

1) The revisions of ISO/R 190 and ISO/R 952 will be incorporated in ISO 6892.

3.2 Mechanical properties

Before comparison with the limiting values given in tables 3 and 4, the measured or calculated values of 0,2 % yield strength, or of tensile strength, shall be rounded to the nearest 1 N/mm², and those of the percentage elongation rounded to the nearest 1 %.

Test pieces shall be taken in the longitudinal direction; for rolled flat products of thickness greater than 6,0 mm, test pieces may be taken in the long transverse direction.

3.2.1 The minimum values of the mechanical properties of semi-finished products in magnesium-zinc-zirconium alloys in the temper conditions as defined in ISO/R 2107, shall be as given in table 3.

3.2.2 The minimum values of the mechanical properties of semi-finished products in magnesium-aluminium-zinc alloys in

the temper conditions as defined in ISO/R 2107, shall be as given in table 4.

4 Methods of test

4.1 Chemical composition

The determination of the alloying elements given in tables 1 and 2 should be performed in accordance with methods forming the subject of International Standards.

Other methods may be used, but in case of dispute the International Standard methods shall be adopted.

4.2 Tensile test

The tensile test shall be carried out by methods in conformity with ISO/R 190 and ISO/R 952.

Table 3

Type of product	Alloy	Temper	Thickness or diameter (D) mm	Tensile strength R_m N/mm ² *	0,2 % yield strength $R_{p0,2}$ N/mm ² *	Elongation A $5,65 \sqrt{S_0}$ %
Bars and solid sections	Mg-Zn6Zr	M	$D \leq 50$	300	210	5
	Mg-Zn3Zr	TE	$D \leq 50$	310	230	5
	Mg-Zn3Zr	M	$D \leq 10$	270	190	8
			$10 < D \leq 100$	300	225	8
	Mg-Zn1Zr	M	$D \leq 10$	250	170	8
			$10 < D \leq 100$	260	185	8
Tubes and hollow sections	Mg-Zn1Zr	M	All section sizes	250	170	5
Forgings	Mg-Zn6Zr	TE	All section sizes	280	180	7
	Mg-Zn3Zr	M		270	180	6
Rolled flat products	Mg-Zn3Zr	M	$D \leq 0,5$	250	—	—
			$0,5 < D \leq 1,6$	250	160	6
			$1,6 < D \leq 6$	265	180	7
			$6 < D \leq 50$	250	150	8
	Mg-Zn1Zr	M	$D \leq 0,5$	240	—	—
			$0,5 < D \leq 1,6$	240	160	5
			$1,6 < D \leq 6$	250	170	6
			$6 < D \leq 25$	230	130	8
			$25 < D \leq 50$	220	120	8

* 1 N/mm² = 1 MPa

Table 4

Type of product	Alloy	Temper	Thickness or diameter (D) mm	Tensile strength R_m N/mm ² *	0,2 % yield strength $R_{p0,2}$ N/mm ² *	Elongation $A_{5,65 \sqrt{S_0}}$ %
