Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 3731 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 3, *Electrical and electronic equipment*.

This fourth edition cancels and replaces the third edition (ISO 3731:1997), which has been technically revised.

Road vehicles — Connectors for the electrical connection of towing and towed vehicles — 7-pole connector type 24 S (supplementary) for vehicles with 24 V nominal supply voltage

1 Scope

This International Standard specifies the dimensional characteristics of, and specific requirements for, 7-pole connectors of type 24 S and their contact allocation for the electrical connection of towing and towed vehicles with 24 V nominal supply voltage, thus ensuring interchangeability. A 24 S connector is intended to be used in addition to a 24 N connector according to ISO 1185 where more than 7 poles are required.

NOTE For new developments and where more than 7 poles are required, as an alternative to the use of the 7-pole connector in accordance with this International Standard and ISO 1185, use of the 15-pole connector in accordance with ISO 12098 ^[1] may be required.

2 Normative references

The following referenced documents are indispensable for application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 1185, *Road vehicles — Connectors for the electrical connection of towing and towed vehicles — 7-pole connector type 24 N (normal) for vehicles with 24 V nominal supply voltage*

ISO 4009, *Commercial vehicles — Location of electrical and pneumatic connections between towing vehicles and trailers*

ISO 4091:2003, *Road vehicles — Connectors for the electrical connection of towing and towed vehicles — Definitions, tests and requirements*

ISO 4141 (all parts), *Road vehicles — Multi-core connecting cables*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 4091 apply.

4 Dimensions

4.1 General

Details not specified are at the manufacturer's discretion.

4.2 Plug

Dimensions shall be in accordance with Figure 1. The plug shall have six spring tubes, numbered 2 to 7, and one pin, No. 1.

- a Locking collar.
b Handle downwards or to right and left, at the discretion of the manufacturer.
c Pitch circle diameter.
d Rear view of the terminals.

Figure 1 — Plug

4.3 Socket

Dimensions shall be in accordance with Figure 2. The socket shall have six pins, numbered 2 to 7, and one spring tube, No. 1, corresponding to Pin No.1 of the plug.

Dimensions in millimetres

- a Cover drawn in the open position.
- b Contact No. 1.
- c Pitch circle diameter.
- d Position of the cover with plug introduced.
- e Locking lug.
- f Sealing ring.
- g Reference plane.

Figure 2 — Socket

5 Application of the connector

5.1 General

The coiled cable assembly is fitted to the semi-trailer towing vehicle (fifth-wheel tractor). The coiled cable assembly may be connected to the electrical on-board network of the towing vehicle with or without the connection (see Figure 3).

The uncoiled cable assembly is fitted to the drawbar trailer. Therefore, the trailer towing vehicle (drawbar tractor) shall be fitted with a socket mounted at the rear of the vehicle (see Figure 3).

Key

- 1 socket
- 2 park socket
- 3 plug
- ^a See 5.1.

Figure 3 — Electrical connection positions

5.2 Distinguishing marking

Connectors of type 24 S shall be distinguished from 24 N connectors (see ISO 1185) by means of different colouring of at least the insulating parts. A light and permanent colour, preferably white, shall be used for the 24 S connector.

5.3 Connector positions and free space

The positions of, and free space around, the connectors shall be in accordance with ISO 4009.

5.4 Contact allocation

The allocation of the seven contacts shall be in accordance with Table 1.

Table 1 — Contact allocation

Contact No.	Function	Core insulation colour (for information)
1	Common return	White
2	Reserved for future allocation	Black
3	Reversing light	Yellow
4	Permanent power supply	Red
5	Sensing device with common return	Green
6	Power supply controlled by ignition switch	Brown
7	Rear fog light	Blue

5.5 Contact designation

The contact designation numbers shall be permanently marked on the inside of the socket cover, and on the terminal faces of both plug and socket.

The character size shall not be less than 2 mm. However, where limited space is available, a smaller size may be used on the terminal face.

5.6 Terminals

The terminals at the rear side of the pins and tubes shall be capable of accepting cables with the following nominal cross-sectional areas.

- Contact Nos. 1, 4 and 6: 2,5 mm²
- Contact Nos. 2, 3, 5 and 7: 1,5 mm².

5.7 Connecting cable

The connecting cable shall meet the requirements of the applicable parts of ISO 4141.

5.8 Protection of disconnected plug

A means of storing the plug when disconnected shall be provided on the vehicle or vehicles, intended to protect the plug from the ingress of water or foreign bodies and from accidental damage.

6 Performance requirements

6.1 General

Connectors according to this International Standard shall be tested in the sequences given in Table 2; for test procedures, see ISO 4091. They shall meet the requirements of ISO 4091, except where specified differently in the following subclauses.

Table 2 — Test sequences

Test	Sample group				
	A	B	C	D	E
Visual examination	1, 9	1, 11	1, 8	1, 10	1, 11
Dimensional check	2				
Mismating	3				
Connection	4	2	2	2	2
Disconnection	8	10	7	9	9
Locking device and cable retention strength	5	3, 9		3, 8	3, 8
Lateral strength at low temperature	7				
Current carrying capacity			4		
Connection resistance		4, 7	3, 6	4, 7	4, 7
Current cycling			5		
Withstand voltage		5, 8		6	5, 10
Static load	6				
Endurance					6
Temperature/humidity cycling		6			
Salt spray				5	

6.2 Mismating

6.2.1 Test

Check whether it is possible to make contact between Contact No. 1 of the socket in accordance with this International Standard and

- Contact Nos. 2 to 7 of the plug specified in this International Standard, or
- any contact of the plug in accordance with ISO 1185.

6.2.2 Requirement

No contact is permitted.

6.3 Locking device and cable retention strength

Perform the locking device and cable retention strength test according to ISO 4091. Apply the specified force on the cable retention only of the disengaged plug. Apply a force of (500 ± 5) N.

6.4 Connection and disconnection

Perform the connection and disconnection tests according to ISO 4091.

The connection and disconnection forces shall be (150 ± 50) N.

6.5 Salt spray

Perform the salt spray test according to ISO 4091:2003, except that arrangements b) and c) shall not apply.

6.6 Temperature/humidity cycling

Perform the temperature/humidity cycling test according to ISO 4091:2003, but with Steps d) to g) modified as follows:

...

d) Lower t_c to $(-25 \pm 2)^\circ\text{C}$ within 2,5 h.

e) Hold t_c at $(-25 \pm 2)^\circ\text{C}$ for 2 h.

f) Raise t_c to $(75 \pm 2)^\circ\text{C}$ within 1,5 h.

g) Hold t_c at $(75 \pm 2)^\circ\text{C}$ for 2 h.

6.7 Endurance

Perform the endurance test according to ISO 4091, but for 1 000 cycles only.
