Ref. No. ISO 571-1976 (E)

Descriptors : textile machinery, looms, weaving, combs.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

Prior to 1972, the results of the work of the technical committees were published as ISO Recommendations; these documents are in the process of being transformed into International Standards. As part of this process, Technical Committee ISO/TC 72, *Textile machinery and accessories*, has reviewed ISO Recommendation R 571-1967 and found it technically suitable for transformation. International Standard ISO 571 therefore replaces ISO Recommendation R 571-1967, to which it is technically identical.

ISO Recommendation R 571 had been approved by the member bodies of the following countries :

Chile	Greece	Switzerland
Czechoslovakia	India	Turkey
Egypt, Arab Rep. of	Netherlands	United Kingdom
France	Poland	
Germany	Spain	

The member body of the following country had expressed disapproval of the Recommendation on technical grounds :

U.S.S.R.

The member bodies of the following countries disapproved the transformation of the Recommendation into an International Standard :

France
Germany
United Kingdom

Textile machinery and accessories — Metal reeds with double-spring baulk — Dimensions

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the dimensions of metal reeds with double-spring baulk for use in the textile industry.
