FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5752 was developed by Technical Committee ISO/TC 153, *General purpose industrial valves*, and was circulated to the member bodies in August 1977.

It has been approved by the member bodies of the following countries :

Australia	Italy	Spain
Austria	Japan	Sweden
Canada	Mexico	Switzerland
Denmark	Netherlands	United Kingdom
Finland	Norway	U.S.A.
Germany, F. R.	Poland	
India	Romania	

The member bodies of the following countries expressed disapproval of the document on technical grounds :

Belgium
France
South Africa, Rep. of
U.S.S.R.

Metal valves for use in flanged pipe systems — Face-to-face and centre-to-face dimensions

0 INTRODUCTION

The object of this International Standard is the establishment of face-to-face and centre-to-face dimensions for metal valves to permit a degree of dimensional interchangeability. It is intended for use in preparing product standards for industrial valves.

The pressure/temperature ratings for the different types of valves are those to be specified in the valve product standards for the types of valve and materials used.

Where dimensions from inch series of valves have been converted into millimetres, the exact values obtained have been rounded to the whole millimetre below when the decimal value obtained in conversion has been less than 0,5 mm, and to the whole millimetre above when the decimal value obtained in conversion has been equal to or greater than 0,5 mm.

1 SCOPE AND FIELD OF APPLICATION

1.1 This International Standard specifies the basic series of face-to-face or centre-to-face dimensions for two-way metal valves used in flanged pipe systems. Each basic series of face-to-face or centre-to-face dimensions may be used as required with flanges of mating dimensions conforming to ISO 2084 or ISO 2229.

1.2 The range of pressure ratings, in PN values, is

1 — 1,6 — 2,5 — 4 — 6 — 10 — 16 — 25 and 40
and classes 125 — 150 — 250 — 300 and 600.

1.3 The range of nominal sizes, in DN values, is

10 — 15 — 20 — 25 — 32 — 40 — 50 — 65 — 80 — 100 —
125 — 150 — 200 — 250 — 300 — 350 — 400 — 450 —
500 — 600 — 700 — 800 — 900 — 1 000 — 1 200 —
1 400 — 1 600 — 1 800 and 2 000.

2 DEFINITIONS

2.1 nominal size (DN): A numerical designation of size which is common to all components in a piping system other than components designated by outside diameters. It is a convenient round number for reference purposes and it is normally only loosely related to manufacturing dimensions.

It is designated by the letters DN, followed by a number.

2.2 nominal pressure: The nominal pressures in this International Standard follow one of two systems, the PN rating system or the class rating system.

2.3 face-to-face dimension (for straight pattern valves): The distance, expressed in millimetres, between the two planes perpendicular to the valve axis located at the extremities of the body end ports or as may be specified in the relevant valve products standards.

The face-to-face dimension for butterfly valves is the distance between the extremities of the valve in the installed conditions.

2.4 centre-to-face dimension (for angle pattern valves): The distance, expressed in millimetres, between the plane located at the extremity of either body end port and perpendicular to its axis and the other body end port axis.

3 DIMENSIONS AND TOLERANCES

The basic series of face-to-face and centre-to-face dimensions, expressed in millimetres, are given in table 1. The table is a summary of the dimensions in tables 2 to 10 giving the origin of each series, and should be referred to when consideration is given to the standardization of valve types not presently covered by this International Standard. Each particular column does not necessarily include all the valves of the relevant basic series.

The face-to-face or centre-to-face dimensions as appropriate for the types of valves included in this International Standard, shall be in accordance with table 2 for the isomorphic series and tables 3 to 10 for the isobaric series, and the tolerances shall be in accordance with table 11.

4 TERMINOLOGY*

4.1 Gate valves

4.1.1 Wedge gate valve

4.1.2 Parallel slide gate valve

4.2 Butterfly valves

4.2.1 Wafer butterfly valve

4.2.2 Double-flanged butterfly valve

4.3 Plug and ball valves

4.3.1 Conical or cylindrical plug valve

4.3.2 Ball valve

4.4 Diaphragm valves

4.4.1 Diaphragm valve

4.4.2 Non-return diaphragm valve

* The illustrations are intended to be a diagrammatic only and should not be used as symbols. They do not assume the principle or the construction details.

4.5 Globe valves

4.5.1 Globe valve

4.5.2 Oblique type of globe valve

4.5.3 Globe type angle valve

4.6 Check (non-return) valves

4.6.1 Lift type check valve

4.6.2 Swing type check valve

4.6.3 Lift type angle check valve

NOTE — "Isomorphic" is the name of a series of flow pressure gate valves of a specified shape, having, for each nominal size the minimum wall thickness meeting the foundry or manufacturing requirements (in contrast to "isobar series", i.e. having the same maximum operating pressure at a temperature of 20 °C). Since the maximum permissible pressure at a temperature of 20 °C in such a series decreases as the nominal size increases, the gate valves may only be used at the maximum permissible pressures at a temperature of 20 °C given in the above table, subject to the material of which the body and the bonnet is formed.

1) 1 bar = 10⁵ Pa

TABLE 10 — Copper alloy gate valves, globe valves and check valves

Nominal size (DN)	Face-to-face dimensions	
	PN 10/16 and PN 25/40 Class 150 and Class 300	
	short*	long**
10	80	108
15	80	108
20	90	117
25	100	127
32	110	146
40	120	159
50	135	190
65	165	216
80	185	254
Basic series	18	7

* Short dimensions shall be preferred for all PN 16 and PN 25 valves with screwed bonnets and integral seats.

** Long dimensions shall be preferred for :

- all PN 40 valves;
- parallel slide and double disk gate valves;
- valves with renewable seats;
- valves with union or bolted bonnets.

TABLE 11 — Tolerances

Face-to-face or centre-to-face dimensions of unlined valves		Tolerances
over	up to and including	
0	250	± 2
250	500	± 3
500	800	± 4
800	1 000	± 5
1 000	1 600	± 6
1 600	2 250	± 8
