Ref. No. ISO 5996-1984 (E)

Descriptors : valves, flanged valves, gate valves, cast iron products, specifications, dimensions, materials, designation, marking.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 5996 was prepared by Technical Committee ISO/TC 153, *Valves*.

Cast iron gate valves

0 Introduction

The purpose of this International Standard is the establishment of the basic requirements for cast iron gate valves with bolted bonnet connections and flanged ends.

1 Scope

This International Standard specifies requirements for hand-wheel or actuator-operated cast iron gate valves for general application including the following features:

- inside screw stem (non-rising) or outside screw stem (rising);
- wedge or parallel obturator;
- single or double obturator;
- metallic or elastomeric obturator seatings;
- metallic or elastomeric body seatings;
- ferrous metal and/or copper alloy trims;
- bolted bonnet connection;
- flanged ends.

2 Field of application

2.1 This International Standard covers valves of the following nominal sizes, DN:

40; 50; 65; 80; 100; 125; 150; 200; 250; 300; 350; 400; 450; 500 (550); 600 (650); 700; 750; 800; 900; 1000.

2.2 This International Standard applies to valves of the following nominal pressures, ISO PN:

- 1; 1,6; 2,5; 4; 6 and 10 in isomorphic series in flake graphite cast iron, and
- 10; 16; 20 and 50 in flake graphite cast iron, and
- 10; 16; 20; 25; 40 and 50 in spheroidal cast iron.

4 Pressure/temperature ratings

Pressure/temperature ratings in accordance with ISO 7005/2 shall apply.

1) At present at the stage of draft. (Revision of ISO/R 185-1961.)

2) At present at the stage of draft.

5 Design

5.1 Face-to-face dimensions

The figures shown in tables 1 and 2 apply to unlined valves and include the raised faces of the flanges.

Table 1 — Face-to-face dimensions for isomorphic series flake graphite cast iron gate valves, ISO PN1 to ISO PN10

DN	ISO PN1	ISO PN1,6	ISO PN2,5	ISO PN4	ISO PN6	ISO PN10	Flange mating dimensions

Table 3 — Tolerances on face-to-face dimensions

Dimensions and tolerances in millimetres

Face-to-face dimensions of unlined valves		Tolerances
over	up to and including	
0	250	± 2
250	500	± 3
500	800	± 4
800	1 000	± 5
1 000	1 600	± 6

5.2 Other dimensions (see figure 1)

The illustrations are intended to show only the location of dimensions h_2 and h_3 .

NOTE — If not otherwise specified, the valve shall be supplied with a handwheel.

Figure 1

Table 4 — Maximum heights

DN	h_2	h_3
	mm	mm
40	350	480
50	400	510
65	425	560
80	475	610
100	575	720
125	650	875
150	700	950
200	850	1 200
250	1 025	1 440
300	1 125	1 675
350	1 150	1 900
400	1 275	2 070
450	1 350	2 250
500	1 500	2 430
(550)	1 575	2 600
600	1 700	2 850
(650)	1 775	3 125
700	1 800	3 250
750	1 975	3 450
800	2 000	3 750
900	2 400	4 150
1 000	2 500	4 450

NOTE — The dimensions h_2 and h_3 given in table 4 and illustrated in figure 1 are for installation purposes and represent the maximum heights of valves conforming to this International Standard.

a) ISO PN20 flanges

b) ISO PN50 flanges

Figure 2

(See 5.3)

5.3 Flanged body ends

The body flange dimensions shall comply with ISO 7005/2 with the exception of body flange ends for valves in flake graphite cast iron ISO PN20 and ISO PN50 (see figure 2), the dimensions of which are given in table 5.

Table 5 — Body flange dimensions for flake graphite cast iron gate valves, ISO PN20 and ISO PN50

DN	ISO PN20 ¹⁾		ISO PN50 ²⁾		Diameter of raised face W
	Diameter of flange D	Thickness of flange C	Diameter of flange D	Thickness of flange C	
	mm	mm	mm	mm	mm
40	127	14,5	156	21,0	91
50	152	16,0	165	22,5	106
65	178	17,5	191	25,5	125
80	191	19,0	210	28,5	144
100	229	24,0	254	32,0	176
125	254	24,0	279	35,0	211
150	279	25,5	318	36,5	246
200	343	28,5	381	41,5	303
250	406	30,5	445	48,0	357
300	483	32,0	521	51,0	418
350	533	35,0	584	54,0	481
400	597	36,5	648	57,5	535
450	635	40,0	711	60,5	592
500	699	45,0	775	63,5	649
(550)					
600	813	48,0	914	70,0	770

1) Bolt hole dimensions correspond to ISO 7005/2 (ISO PN20).

2) Bolt hole dimensions correspond to ISO 7005/2 (ISO PN50).

5.4 Body tappings

Where the design permits, provision shall be made for a body tapping below the obturator. Body tappings, when required, shall be of the following size.

Valve size, DN	40 to 100	125 to 300	350 to 1 000
Tapping size	1/2	3/4	1

5.5 By-passes

Under certain conditions for gate valves of sizes DN 200 and above, a by-pass may be required.

5.6 Stem sealing

The stem sealing may of the stuffing box and gland form, injector packing form or toroidal seating rings (O-rings) or other pressure actuated types of seal. Seal material shall be suitable for the service temperature.

5.7 Obturator

The obturator design of valves in accordance with this International Standard shall be at the option of the manufacturer.

For example, the following obturator systems may apply:

- wedge seating;
- parallel seating, no seat tightness device;
- parallel seating, seat tightness device;
- resilient seating.

6 Materials

This International Standard is based on materials specified in tables 6 and 7.

6.1 Body and bonnet materials

Table 6 — Materials

Cast iron type	Quality	Corresponding International Standard
Flake graphite cast iron	Grade 20 minimum	ISO 185
Spheroidal graphite cast iron	Grade 370 — 17 Grade 400 — 12 Grade 500 — 07	ISO 1083

6.2 Trim materials

Table 7 shows the materials of the components in seven trim categories which are applicable to gate valves conforming to this International Standard.

STANDARDSISO.COM : Click to view the full PDF of ISO 5996:1984

Table 7 — Trim categories

Component	Category A (resilient seated)	Category B (copper alloy faced)	Category C (stainless steel)	Category D (copper free)	Category E (Cu-Ni-alloy)	Category F (hard facing)	Category G (all iron)
Obturator, integral faces	Cast iron or copper alloy	Copper alloy	Stainless steel, 11,5 % Cr min.	Cast iron	Cu-Ni-alloy		Cast iron
Obturator, separate facings	Cast iron	Cast iron	Cast iron	Cast iron	Cast iron	Cast iron	Cast iron
Body seat and obturator facing	Resilient material*	Copper alloy	Stainless steel, 11,5 % Cr min.	Cast iron and non-alloy steel	Cu-Ni-alloy	Hard facing	Cast iron or stainless steel, 11,5 % Cr min.
Stem	Copper alloy or stainless steel, 11,5 % Cr min.	Copper alloy or stainless steel, 11,5 % Cr min.	Stainless steel, 11,5 % Cr min.	Non-alloy or stainless steel, 11,5 % Cr min.	Stainless steel, 11,5 % Cr min.	Stainless steel, 11,5 % Cr min.	Stainless steel, 11,5 % Cr min.
Stem nut/ yoke sleeve	Copper alloy, stainless steel, cast iron : — flake (inside screw only), — spheroidal, — malleable, — austenitic	Copper alloy, stainless steel, cast iron : — flake (inside screw only), — spheroidal, — malleable, — austenitic	Copper alloy, Cu-Ni-alloy, stainless steel, cast iron : — flake (inside screw only), — spheroidal, — malleable, — austenitic	No copper alloy	No copper alloy	Copper alloy, stainless steel, cast iron : — flake (inside screw only), — spheroidal, — malleable, — austenitic	Copper alloy, Cu-Ni-alloy or spheroidal cast iron

* Resilient material on either body seat or obturator facing.
