Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 145, *Graphical symbols*, Subcommittee SC 1, *Public information symbols*.

This fourth edition cancels and replaces the third edition (ISO 7001:2007), which has been technically revised. It also incorporates the amendments ISO 7001:2007/Amd 1:2013, ISO 7001:2007/Amd 2:2015, ISO 7001:2007/Amd 3:2016, ISO 7001:2007/Amd 4:2017 and ISO 7001:2007/DAmD 5:2021 and the Technical Corrigendum ISO 7001:2007/Amd 1:2013/Cor. 1:2014.

The main changes are as follows:

- addition of previously unpublished public information symbols (PI CF 021, PI CF 022, PI PF 077, PI PF 078, PI PF 079, PI PF 080, PI PF 081, PI PF 082 and PI TF 044);
- addition of a new category of public information symbols, Accessibility, with the code PI AC and the transfer of public information symbols from other categories to this category with new reference numbers.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

All public information symbols are available on the ISO Online browsing platform at <https://www.iso.org/obp/ui>.

Introduction

This document has been developed as a result of the increasing use of non-verbal presentation of information in buildings and other places and for services used by the public. Graphical symbols should be used where text messages will possibly be a barrier to understanding.

Continued growth in international trade, travel and tourism requires a common method of communication, and standardization of public information symbols will help both providers and users, including those with disabilities. Lack of standardization has the potential to lead to confusion.

The use of standardized public information symbols does not replace the need for careful consideration and application of wayfinding and signing schemes; it is recognized that public information symbols will often be used with text in signing systems. This can aid education and comprehension, particularly for new symbols and those which have less common usage.

ISO 7001 is intended to be used by all Technical Committees within ISO charged with developing specific public information symbols for their industry, to ensure that there is only one symbol for each meaning. It is also intended that this document be revised regularly to include public information symbols as they are standardized by ISO and which conform to the principles for development as developed by ISO/TC 145/SC 1. Further design criteria will be added as appropriate and will be approved by ISO/TC 145/SC 1. Specific acceptance criteria, procedures and application forms can be found on the ISO/TC 145/SC 1 website: <https://isotc.iso.org/livelink/livelink?func=ll&objId=9945810&objAction=browse&viewType=1>.

The public information symbols in this document have been validated by ISO/TC 145/SC 1 according to procedures of standardization current at the time of publication. Future standardization of public information symbols will be facilitated with suitable evaluation techniques, such as the testing outlined in the ISO 9186 series. Acceptance criteria for public information symbol qualification ought to be such that there is confidence that a suitable proportion of the intended audience will understand them.

Public information symbols given in this document are considered to have achieved a satisfactory degree of comprehension as established by independent testing or as a result of their use and application at an international level.

The public information symbols given in this document should be reproduced as published. However, it is recognized that there are possibly particular national characteristics and cultural requirements which require minor variations. This is acceptable providing the key elements and design intent of the standardized symbol are not compromised.

Graphical symbols — Registered public information symbols

1 Scope

This document specifies graphical symbols for the purposes of public information.

This document is generally applicable to public information symbols in all locations and all sectors where the public has access. However, it is not applicable to safety signs or those sectors subject to specific regulations (e.g. traffic signs on public roads).

This document specifies the original symbols that can be scaled for reproduction and application purposes.

The symbols can be used in conjunction with text to improve comprehension.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 3864-1, *Graphical symbols — Safety colours and safety signs — Part 1: Design principles for safety signs and safety markings*

ISO 22727:2007, *Graphical symbols — Creation and design of public information symbols — Requirements*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

graphical symbol

visually perceptible figure with a particular meaning used to transmit information independently of language

3.2

public information symbol

graphical symbol intended to give information to the general public, the understanding of which is independent of specialist or occupational training

3.3

safety sign

sign giving a general safety message, obtained by a combination of a colour and geometric shape and which, by the addition of a graphical symbol, gives a particular safety message

3.4

negation

indication of the absence or opposite of something actual or positive

3.5
meaning

message that a public information symbol is intended to convey

3.6
function

written description of the purpose of the information to be conveyed by a graphical symbol

3.7
image content

written description of the elements of a graphical symbol or safety sign and their relative disposition

4 General

4.1 Size

The public information symbols given in this document are designed to be reproduced in a variety of sizes to suit different applications from, for example, small-scale orientation notices to large-scale wayfinding signs, maps and guides.

4.2 Text

The graphical symbols have been designed with the intention that they can be used on their own to convey the information described in the meaning (except the direction arrow, which cannot be used on its own, see [4.3](#)). However, they may be combined with the relevant text on, for example, a sign or notice if considered appropriate. This can be an advantage with less well-established symbols to aid understanding.

4.3 Arrows

The direction arrow (symbol number PI PF 030) shall only be used in conjunction with another symbol (or a symbol and text) to indicate movement of a person towards something. An example is shown in [Figure 1](#).

Figure 1 — Use of the direction arrow with the relevant symbol to indicate female toilet to the right

The direction arrow shall be used to indicate the direction of a person as shown in [Figure 2](#).

	Progress to the right
	Progress to the left
	Progress forward from here Progress forward and through from here Progress forward and up from here
	Progress up to the right Progress forward and across to the right
	Progress down to the right
	Progress up to the left Progress forward and across to the left
	Progress down to the left
	Progress down from here

Figure 2 — Use of direction arrows

The use of all other arrows is given with the relevant graphical symbol and meaning.

4.4 Colour and contrast

The public information symbols given in this document may be reproduced in any colour. However, the combination of safety colours and shapes specified in ISO 3864-1 shall be avoided to ensure there is no confusion between public information symbols and safety signs. This also applies to arrows where the use of green and white shall be avoided to ensure that there is no confusion with the direction arrow, safe condition, used for evacuation routes.

Adequate contrast between the symbol and its background is essential and the symbol should be given a sufficiently large surrounding area to ensure identifiability. All illustrations of graphical symbols in this document have corner marks to give an indication of the minimum area required.

4.5 Negation

Public information symbols shall be negated only for comfort or convenience reasons.

Where the whole activity is to be negated, the negation element shall be a diagonal bar running from top left to bottom right as shown in [Figure 3](#). In order to ensure that there is no confusion with safety signs, there shall not be a surrounding circle. The negation bar shall be placed over the graphical symbol. The graphical symbol shall be designed in such a way that when placed in the template specified in ISO 22727:2007, 7.2 the negation bar does not obscure critical details.

Where only a graphical symbol element in a public information symbol is to be negated to indicate a particular forbidden action, the negation element shall be a cross as shown in [Figure 4](#). The negation cross shall be placed over the graphical symbol element which is being negated.

The negation bar and the negation cross should normally be red.

Meaning: No baggage trolleys or carts.

Function: To signify that baggage trolleys or carts are not allowed.

Image content: Side view of piece of baggage on trolley or cart and negation bar.

Figure 3 — Example of the use of a negation bar

Meaning: Do not drop trash or litter or rubbish.

Function: To indicate that people should not drop trash or litter or rubbish.

Image content: Front view of human figure, with four representative articles of trash or litter or rubbish falling from their hand and a negation cross over them.

Figure 4 — Example of the use of a negation cross

5 Meanings and categorization of public information symbols

5.1 General

This document is maintained electronically using the ISO OBP database at <https://www.iso.org/obp/ui>, which includes all the symbols. The reference number for each symbol is indexed in the database to enable easy searching. Text searches are also possible.

[Tables 1](#) and [2](#), which include a reference number with each standardized public information symbol, may be used to facilitate searches within this database.

5.2 Meaning

[Table 1](#) presents the list of meanings in alphabetical order alongside their reference numbers.

5.3 Categorization

For the convenience of users of this document, the public information symbols have been grouped according to the areas where they are normally expected to be used. However, these groupings are not intended to be exclusive and the use of the public information symbols in other areas, where this is considered appropriate, is not precluded. The public information symbols are categorized as follows:

- a) PF: public facilities.
- b) TF: transport facilities.
- c) TC: tourism, culture and heritage.
- d) SA: sporting activities.
- e) CF: commercial facilities.
- f) BP: behaviour of the public (excluding public safety signs).
- g) AC: accessibility.

[Table 2](#) summarizes the standardized public information symbols in terms of these categorizations.

Each public information symbol should normally be used to convey only one public information message and should normally be placed in one category only.

6 Standardized public information symbols

Tables 3 to 9 present the original public information symbols in a uniform 70 mm² size with corner marks to enable accurate enlargement and reduction. The symbol illustrations are shown without borders in order to allow for consistent reproduction scaling, though the use of borders is encouraged. The symbols should be reproduced exactly as shown in Tables 3 to 9. However, some degree of graphical modification is permitted when national and cultural differences or special application formats need to be considered, provided the key elements and design intent of the standardized symbol are not compromised and comprehension of the sign is maintained. Consistent reproduction and use of these symbols will lead to a progressively improved degree of comprehension at the international level.

The public information symbols are categorized as follows:

- PF: public facilities (see Table 3).
- TF: transport facilities (see Table 4).
- TC: tourism, culture and heritage (see Table 5).

- d) SA: sporting activities (see Table 6).
- e) CF: commercial facilities (see Table 7).
- f) BP: behaviour of the public (excluding safety signs) (see Table 8).
- g) AC: accessibility (see Table 9).

Tables 3 to 9 also include the meaning, function and image content for each symbol.

In cases where the orientation of the symbol is not essential to its meaning, the orientation may be changed.

A graphical symbol should normally be a filled-in form, rather than an outlined form.
