Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7311 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Sub-Committee SC 7, *Injection equipment and filters for use on road vehicles*.

This second edition cancels and replaces the first edition (ISO 7311:1984), of which it constitutes a technical revision.

Annex A of this International Standard is for information only.

Diesel engines — Heads for fuel filters with vertical flange — Mounting and connecting dimensions

1 Scope

This International Standard specifies the mounting and connecting dimensions for heads for fuel filters with vertical flange for diesel (compression-ignition) engines.

Unless otherwise specified, the filter heads apply to bolt-on filters, and spin-on filters according to ISO 7654 having a canister outside diameter of up to 80 mm. In special cases, canisters with an outside diameter of up to 88 mm may be mounted to these heads.

2 Normative reference

The following standard contains provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the edition indicated was valid. All standards are subject to revision and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent edition of the standard indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

3 Dimensions and tolerances

NOTE 1 Features such as threads or bolts for use with the filters are omitted from the figures. The current size for fitment of filters is M16 × 1,5.

3.1 Bolt holes for flanges of single and double filters

See figure 1.

NOTE 2 Engine manufacturers are encouraged to use a centre-to-centre distance for fixing holes or fixing bolts of 50 mm ± 0,5 mm.
