FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 833 was drawn up by Technical Committee ISO/TC 46, *Documentation*, and circulated to the Member Bodies in September 1972.

It has been approved by the Member Bodies of the following countries:

Australia	Hungary	South Africa, Rep. of
Belgium	India	Spain
Canada	Ireland	Sweden
Czechoslovakia	Israel	Switzerland
Denmark	Italy	Thailand
Finland	Netherlands	Turkey
France	New Zealand	United Kingdom
Germany	Romania	U.S.A.

The Member Bodies of the following countries expressed disapproval of the document on technical grounds:

Austria
Poland

This International Standard cancels and replaces ISO Recommendation R 833-1968.

Documentation — International list of periodical title word abbreviations

INTRODUCTION

This International Standard is based on the rules for abbreviating specified in ISO 4, *Documentation — International code for the abbreviation of titles of periodicals*. This international list was obtained by merging the changes and additions suggested by ICSU — AB (International Council of Scientific Unions — Abstracting Board) member services to the NCPTWA (National Clearinghouse for Periodical Title Word Abbreviations) list, along with the word abbreviations contained in ISO/R 833. It reflects as far as is possible the forms of abbreviation used by the English, French, German, and Russian languages.

Transliteration and transcription

Words originally in Cyrillic alphabets were transliterated for inclusion in the list in accordance with Table 1 (page 2). The system used is based upon ISO/R 9, *International system for the transliteration of slavic Cyrillic characters*.

Other non-roman alphabet words or word roots have been transliterated with the aid of systems used by the NCPTWA.

Modified letters used in Danish, Dutch, Finnish, German, Icelandic, Norwegian and Swedish have been replaced by two characters, in accordance with Table 2 (page 3). For all other languages, the modified character has been represented by its unmodified form.

In order to ensure conformity with already existing International Standards or Recommendations of ISO it is necessary to indicate that the transliteration of several characters in this International Standard differs from the system established in ISO/R 9. As this list of periodical title word abbreviations has already been widely disseminated, it does not seem to be practicable at present to redraft the list, but rather to accept it in the form presented by NCPTWA and UNISIST. In case of a future revision the list of abbreviations may be aligned to a simplified transliteration system for mechanized treatment.
