## **Parallel pins with internal thread, of hardened steel and martensitic stainless steel**

*Goupilles cylindriques à trou taraudé en acier trempé et  
en acier inoxydable martensitique*

Reference number  
ISO 8735:1997(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8735 was prepared by Technical Committee ISO/TC 2, *Fasteners*.

This second edition cancels and replaces the first edition (ISO 8735:1987), which has been technically revised.

# Parallel pins with internal thread of hardened steel and martensitic stainless steel

## 1 Scope

This International Standard specifies the characteristics of parallel pins with internal thread of steel, through hardened or case hardened and martensitic stainless steel, with nominal diameters  $d_1$  from 6 mm to 50 mm inclusive.

## 2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 965-2:<sup>1)</sup>, *ISO general purpose metric screw threads – Tolerances – Part 2: Limits of sizes for general purpose bolt and nut threads – Medium quality.*

ISO 3269:1988, *Fasteners – Acceptance inspection.*

ISO 3506-1:1997, *Corrosion-resistant stainless steel fasteners – Part 1: Bolts, screws and studs.*

### 3 Dimensions

See figure 1 and table 1.

1) Slight flat or small groove at the manufacturer's discretion

**Type A: Pin with crown, through hardened steel and martensitic stainless steel**

NOTE — Other dimensions, see type A

**Type B: Flat pin, case hardened steel**

| Plain, i.e. pins to be supplied in natural finish, treated with a protective lubricant, unless otherwise specified by agreement between customer and supplier.                                                                                                                                                                                                                         |                                                                                                                                               |                                                                                                                                                                                                                                   | Plain, i.e. pins to be supplied in natural finish.                                               |                                                             |
| If pins are surface coated appropriate plating or coating processes should be employed to avoid hydrogen embrittlement. When pins are electroplated or phosphate-coated, they shall be suitably treated immediately after plating or coating to obviate detrimental hydrogen embrittlement, although freedom from hydrogen embrittlement ist not absolutely guaranteed (see ISO 4042). |                                                                                                                                               |                                                                                                                                                                                                                                   |                                                                                                  |                                                             |
| All tolerances shall apply prior to the application of a plating or coating.                                                                                                                                                                                                                                                                                                           |                                                                                                                                               |                                                                                                                                                                                                                                   |                                                                                                  |                                                             |
