Passenger cars — Wiper systems — Wiper blade length

Voitures particulières — Dispositifs d'essuie-glace — Longueur des balais

Reference number
ISO 9258:1989(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 9258 was prepared by Technical Committee ISO/TC 22, *Road vehicles*.

Passenger cars — Wiper systems — Wiper blade length

1 Scope

This International Standard sets two ranges of lengths for wiper blades for passenger cars, to be used as a guide for their selection.

2 Definition

For the purposes of this International Standard, the following definition applies.

wiper blade length: Length of the rubber part of the wiper blade.

3 Position of fixing axis

The wiper blade fixing axis shall be in the middle of the nominal wiper blade length.

4 Guide for choice of wiper blade length

Table 1 gives short and extended lists of wiper blade lengths, which may serve as a guide for choice of wiper blades for passenger cars.
