Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

International Standard ISO/IEC 10165-2 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in collaboration with CCITT. The identical text is published as CCITT Recommendation X.721.

ISO/IEC 10165 consists of the following parts under the general title *Information technology – Open Systems Interconnection – Structure of management information*:

- Part 1: *Management information model*
- Part 2: *Definition of management information*
- Part 4: *Guidelines for the definition of managed objects*
- Part 5: *Generic management information*
- Part 6: *Requirements and guidelines for implementation conformance statement proformas associated with management information*

Annex A forms an integral part of this part of ISO/IEC 10165. Annexes B, C, D, E, F and G are for information only.

Introduction

ISO/IEC 10165 is a multipart standard developed according to ISO 7498 and ISO/IEC 7498-4. ISO/IEC 10165 is related to the following International Standards:

- ISO/IEC 9595:1990, *Information technology – Open Systems Interconnection – Common management information service definition*;
- ISO/IEC 9596:1990, *Information technology – Open Systems Interconnection – Common management information protocol*;
- ISO/IEC 10040:1992, *Information technology – Open Systems Interconnection – Systems management overview*;
- ISO/IEC 10064:1992, *Information technology – Open Systems Interconnection – Systems Management*.

INTERNATIONAL STANDARD

CCITT RECOMMENDATION

INFORMATION TECHNOLOGY – OPEN SYSTEMS INTERCONNECTION – STRUCTURE OF MANAGEMENT INFORMATION: DEFINITION OF MANAGEMENT INFORMATION

1 Scope

This Recommendation | International Standard

- defines the managed object classes, attribute types, name bindings, packages, specific attributes, action types, parameter types and notification types documented in accordance with CCITT Rec. X.722 | ISO/IEC 10165-4;
- specifies compliance requirements placed on other CCITT Recommendations | International Standards that make use of these definitions.

This Recommendation | International Standard is applicable to the development of OSI managed object class specifications and provides generic definitions that support OSI systems management functions. These definitions may also be used in other Recommendations | International Standards specifying object classes, attributes, notifications and action types.

2 Normative references

The following CCITT Recommendations | International Standards contain provisions which, through reference in this text, constitute provisions of this Recommendation | International Standard. At the time of publication, the editions indicated were valid. All Recommendations and Standards are subject to revision, and parties to agreements based on this Recommendation | International Standard are encouraged to investigate the possibility of applying the most recent editions of the Recommendations | Standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards. The CCITT Secretariat maintains a list of the currently valid CCITT Recommendations.

2.1 Identical CCITT Recommendations | International Standards

- CCITT Recommendation X.720 (1992) | ISO/IEC 10165-1 : 1992, *Information technology - Open Systems Interconnection - Structure of management information: Management information model.*
- CCITT Recommendation X.722 (1992) | ISO/IEC 10165-4 : 1992, *Information technology - Open Systems Interconnection - Structure of management information: Guidelines for definition of managed objects.*
- CCITT Recommendation X.730 (1992) | ISO/IEC 10164-1 : 1992, *Information technology - Open Systems Interconnection - Systems Management: Object management function.*
- CCITT Recommendation X.731 (1992) | ISO/IEC 10164-2 : 1992, *Information technology - Open System Interconnection - Systems Management: State management function.*
- CCITT Recommendation X.732 (1992) | ISO/IEC 10164-3 : 1992, *Information technology - Open Systems Interconnection - Systems Management: Attributes for representing relationships.*
- CCITT Recommendation X.733 (1992) | ISO/IEC 10164-4 : 1992, *Information technology - Open Systems Interconnection - Systems Management: Alarm reporting function.*

- CCITT Recommendation X.734¹⁾ | ISO/IEC 10164-5 : 1992, *Information technology - Open Systems Interconnection - Systems Management Event report management function.*
- CCITT Recommendation X.735¹⁾ | ISO/IEC 10164-6 : 1992, *Information technology - Open Systems Interconnection - Systems Management: Log control function.*
- CCITT Recommendation X.736 (1992) | ISO/IEC 10164-7 : 1992, *Information technology - Open Systems Interconnection - Systems Management: Security alarm reporting function.*

2.2 Paired CCITT Recommendations | International Standards equivalent in technical content

- CCITT Recommendation X.200 (1988), *Reference model of Open Systems Interconnection for CCITT applications.*
ISO 7498 : 1984, *Information processing systems - Open Systems Interconnection - Basic Reference Model.*
- CCITT Recommendation X.208 (1988), *Specification of abstract syntax notation one (ASN.1).*
ISO/IEC 8824: 1990, *Information technology - Open Systems Interconnection - Specification of Abstract Syntax Notation One (ASN.1).*
- CCITT Recommendation X.501 (1988), *The Directory - Models.*
ISO/IEC 9594-2 : 1990 *Information technology - Open Systems Interconnection - The Directory - Part 2: The Models.*
- CCITT Recommendation X.710 (1991), *Common management information service definition for CCITT applications.*
ISO/IEC 9595 : 1991, *Information technology - Open Systems Interconnection - Common management information service definition.*
- CCITT Recommendation X.711 (1991), *Common management information protocol specification for CCITT applications.*
ISO/IEC 9596-1: 1991, *Information technology - Open Systems Interconnection - Common management information protocol specification - Part 1: Specification.*

3 Definitions

For the purposes of this Recommendation | International Standard the following definitions apply.

3.1 Event report management function definitions

This Recommendation | International Standard makes use of the following terms defined in CCITT Rec. X.734 | ISO/IEC 10164-5:

- a) discriminator;
- b) event forwarding discriminator;
- c) potential event report.

3.2 Management information model definitions

This Recommendation | International Standard makes use of the following terms defined in CCITT Rec. X.720 | ISO/IEC 10165-1:

- a) Attribute type;
- b) Distinguished name;
- c) Relative distinguished name.

¹⁾ Presently at state of draft Recommendation.

4 Abbreviations

ASN.1	Abstract Syntax Notation One
CMIS	Common Management Information Service
CMIP	Common Management Information Protocol
EFD	Event Forwarding Discriminator
Id	Identifier
PDU	Protocol Data Unit
RDN	Relative Distinguished Name

5 Notation

Attribute types and specific attributes are defined in this Recommendation | International Standard using the templates, defined in CCITT Rec. X.722 | ISO/IEC 10165-4.

The behavioural aspects of the specific attributes described here shall be incorporated into the definition of the managed object class importing these specific attributes.

6 Definition of managed object classes

This Recommendation | International Standard defines Managed Object classes which are referenced by the System Management Functions of CCITT Recs. in X.730 - X.736 | ISO/IEC 10164 parts 1 to 7, or which are intended to be used as superclasses for the purpose of inheritance in the definition of Managed Object classes in other standards. The syntax of the attributes referenced in the templates are defined in clause 13.

6.1 Alarm record

The **alarmRecord** managed object class is used to define the information stored in the log as a result of receiving alarm notifications or alarm reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Alarm notification described in CCITT Rec. X.733 | ISO/IEC 10164-4.

```

alarmRecord      MANAGED OBJECT CLASS
DERIVED FROM    eventLogRecord;
CHARACTERIZED BY
-- The appropriate object identifier values for the eventType attribute, inherited from eventLogRecord
-- managed object class are communicationAlarm, qualityofServiceAlarm, processingErrorAlarm,
-- equipmentAlarm and environmentalAlarm --

6.2 Attribute value change record

The **attributeValueChangeRecord** managed object class is used to define the information stored in the log as a result of receiving attribute value change notifications or attribute value change event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Attribute Value Change notification described in CCITT Rec. X.730 | ISO/IEC 10164-1.

attributeValueChangeRecord MANAGED OBJECT CLASS
 DERIVED FROM eventLogRecord;

-- see CCITT Rec. X.734 | ISO/IEC 10164-5 for the description of this managed object class.

REGISTERED AS {smi2MObjectClass 3};

6.4 Event forwarding discriminator

The **eventForwardingDiscriminator** managed object class is used to define the conditions that shall be satisfied by potential event reports before the event report is forwarded to a particular destination. This managed object class is a subclass of **discriminator** managed object class. The semantics of the managed object class, namely its attributes, management operations and behaviour, are described in CCITT Rec. X. 734 | ISO/IEC 10164-5.

eventForwardingDiscriminator **MANAGED OBJECT CLASS**

externalScheduler PRESENT IF "both the daily scheduling package and weekly scheduling packages are not present in an instance and external scheduling is supported by that instance.";

REGISTERED AS {smi2MObjectClass 6};

6.7 Log record

The **logRecord** managed object class is used to define the records contained in a log managed object. The semantics of the managed object class, namely its attributes and behaviour are described in CCITT Rec. X.735 | ISO/IEC 10164-6.

```
logRecord      MANAGED OBJECT CLASS
DERIVED FROM  top;
CHARACTERIZED BY
logRecordPackage PACKAGE
    BEHAVIOUR
logRecordBehaviour BEHAVIOUR
DEFINED AS "This managed object represents the information stored in the logs";;
ATTRIBUTES
logRecordId      GET,
loggingTime      GET;;;

REGISTERED AS {smi2MObjectClass 7};
```

6.8 Object creation record

The **objectCreationRecord** managed object class is used to define the information stored in the log as a result of receiving object creation notifications or Object Creation event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Object Creation notification described in CCITT Rec. X.730 | ISO/IEC 10164-1.

```
objectCreationRecord      MANAGED OBJECT CLASS
DERIVED FROM  eventLogRecord;
CHARACTERIZED BY
-- The appropriate object identifier value for the eventType attribute, inherited from eventLogRecord
-- managed object class, is objectCreation
objectCreationRecordPackage PACKAGE
    BEHAVIOUR
objectCreationRecordBehaviour BEHAVIOUR
DEFINED AS "This managed object is used to represent logged information that resulted from object creation
notifications or event reports";;;

CONDITIONAL PACKAGES
sourceIndicatorPackage PRESENT IF "the sourceIndicator parameter is present in the object creation
notification or event report corresponding to the instance of object creation record",

attributeListPackage PRESENT IF "the attributeList parameter is present in the object creation notification
or event report corresponding to the instance of object creation record";

REGISTERED AS {smi2MObjectClass 8};
```

6.9 Object deletion record

The **objectDeletionRecord** managed object class is used to define the information stored in the log as a result of receiving object deletion notifications or Object deletion event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Object Deletion notification described in CCITT Rec. X.730 | ISO/IEC 10164-1.

```
objectDeletionRecord      MANAGED OBJECT CLASS
DERIVED FROM  eventLogRecord;
CHARACTERIZED BY
-- The appropriate object identifier value for the eventType attribute, inherited from eventLogRecord
-- managed object class, is objectDeletion
objectDeletionRecordPackage PACKAGE
    BEHAVIOUR
objectDeletionRecordBehaviour BEHAVIOUR
DEFINED AS "This managed object is used to represent logged information that resulted from object deletion
notifications or event reports";;;
```

CONDITIONAL PACKAGES

sourceIndicatorPackage PRESENT IF "the sourceIndicator parameter is present in the object deletion notification or event report corresponding to the instance of object deletion record",

attributeListPackage PRESENT IF "the attributeList parameter is present in the object deletion notification or event report corresponding to the instance of object deletion record";

REGISTERED AS {smi2MObjectClass 9};

6.10 Relationship change record

The **relationshipChangeRecord** managed object class is used to define the information stored in the log as a result of receiving relationship change notifications or relationship change event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Relationship Change notification described in CCITT Rec.X.732 | ISO/IEC 10164-3.

relationshipChangeRecord MANAGED OBJECT CLASS

DERIVED FROM eventLogRecord;

-- The appropriate object identifier value for the eventType attribute, inherited from eventLogRecord

-- managed object class, is relationshipChange

CHARACTERIZED BY

relationshipChangeRecordPackage PACKAGE

BEHAVIOUR

relationshipChangeRecordBehaviour BEHAVIOUR

DEFINED AS "This managed object is used to represent logged information that resulted from relationship change notifications or event reports";

ATTRIBUTES

CONDITIONAL PACKAGES

sourceIndicatorPackage PRESENT IF "the Source indicator parameter is present in the relationshipChange notification or event report corresponding to the instance of relationship change record",

attributeIdentifierListPackage PRESENT IF "the Attribute identifier list parameter is present in the relationshipChange notification or event report corresponding to the instance of relationship change record";

REGISTERED AS {smi2MObjectClass 10};

6.11 Security alarm report record

The **securityAlarmReportRecord** managed object class is used to define the information stored in the log as a result of receiving security alarm notifications or security alarm event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the Security Alarm notification described in CCITT Rec. X.736 | ISO/IEC 10164-7.

securityAlarmReportRecord MANAGED OBJECT CLASS

DERIVED FROM eventLogRecord;

CHARACTERIZED BY

-- The appropriate object identifier values for the eventType attribute, inherited from eventLogRecord

-- managed object class, are integrityViolation, operationalViolation, physicalViolation,

6.12 State change record

The **stateChangeRecord** managed object class is used to define the information stored in the log as a result of receiving state change notifications or state change event reports. The semantics of the managed object class, namely its attributes and behaviour are derived from the State Change notification described in CCITT Rec. X.731 | ISO/IEC 10164-2.

                        to indicate the availability of the resource according to a predetermined time schedule." ;;
                        ATTRIBUTES
                        availabilityStatus REQUIRED VALUES Attribute-ASN1Module.SchedulingAvailability    GET;
```

REGISTERED AS {smi2Package 22};

8.6 Correlated notifications

The **correlatedNotificationsPackage** package contains the **correlatedNotifications** attribute described in CCITT Rec. X.733 | ISO/IEC 10164-4.

```
correlatedNotificationsPackage PACKAGE
                        ATTRIBUTES
                        correlatedNotifications    GET;
```

REGISTERED AS {smi2Package 23};

8.7 Notification identifier

The **notificationIdentifierPackage** package contains the **notificationIdentifier** attribute described in CCITT Rec. X.733 | ISO/IEC 10164-4.

```
notificationIdentifierPackage PACKAGE
                        ATTRIBUTES
                        notificationIdentifier    GET;
```

REGISTERED AS {smi2Package 24};

8.8 Daily scheduling

The semantics of **dailyScheduling** package are described in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

```
dailyScheduling    PACKAGE
                        ATTRIBUTES
                        intervalsOfDay REPLACE-WITH-DEFAULT
                        DEFAULT VALUE Attribute-ASN1Module.defaultIntervalsOfDay
                        GET-REPLACE ADD-REMOVE;
```

REGISTERED AS {smi2Package 25};

8.9 Duration

The semantics of **duration** package are described in CCITT Rec.X.734 | ISO/IEC 10164-5 and CCITT Rec.X.735 | ISO/IEC 10164-6.

```
duration      PACKAGE
              ATTRIBUTES
startTime     GET-REPLACE,
stopTime      REPLACE-WITH-DEFAULT
              DEFAULT VALUE Attribute-ASN1Module.defaultStopTime
              GET-REPLACE;
```

REGISTERED AS {smi2Package 26};

8.10 External scheduler

The semantics of **externalScheduler** package are described in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

```
externalScheduler  PACKAGE
                  ATTRIBUTES
schedulerName     GET;
REGISTERED AS     {smi2Package 27};
```

8.11 Source indicator

The **sourceIndicatorPackage** package contains the sourceIndicator attribute described in CCITT Rec. X.730 | ISO/IEC 10164-1, CCITT Rec. X.731 | ISO/IEC 10164-2, and CCITT Rec. X.732 | ISO/IEC 10164-3.

```
sourceIndicatorPackage  PACKAGE
                      ATTRIBUTES
sourceIndicator         GET;
```

REGISTERED AS {smi2Package 28};

8.12 Weekly scheduling

The semantics of **weeklyScheduling** package are described in CCITT Rec.X.734 | ISO/IEC 10164-5 and CCITT Rec.X.735 | ISO/IEC 10164-6.

```
weeklyScheduling  PACKAGE
                  ATTRIBUTES
weekMask          REPLACE-WITH-DEFAULT
                  DEFAULT VALUE Attribute-ASN1Module.defaultWeekMask
                  GET-REPLACE ADD-REMOVE;
```

REGISTERED AS {smi2Package 29};

9 Definition of generic attribute types

This Recommendation | International Standard defines a number of generic attribute types. These are intended to be used in the definition of specific attributes appearing in the definitions of Managed Object Classes.

Each attribute type definition comprises

- the structure of the attribute value;
- the inherent properties of the attribute in terms of its behaviour;
- the permitted matching operations that may be performed on an attribute having this type;
- the ways in which specific attributes having this type relate to other attributes.

An attribute type definition does not include an object identifier. This shall form part of the definition of each of the specific attributes of that type. Definitions of specific attributes may also refine the definition given in the type, for example

- to extend the behaviour definition to relate the behaviour to the operation of the resource represented by the managed object;
- parameters be associated with the attribute.

The template definitions are specified below for each attribute's type. The ASN.1 supporting productions are defined in 14.2.

9.1 Counter

The semantics of the **counter** attribute type are defined below.

Counters are a management abstraction of an underlying counting process. Two types of counters are modelled to meet different needs. The non-settable (or simple) counter is defined to operate autonomously, i.e. not subject to change by Management operation, in order to enable different managing stations to access its information without interference. The settable counter, in contrast, is defined to allow setting or resetting by Management operation, and therefore is more suited to use by a single managing station. Both types are defined as attributes.

A counter is regarded as associated with some internal event, which may be, but is not in general, a defined event represented in management information. The current value is incremented by 1 when this event occurs. It can take any values in its range. When a counter reaches its maximum value, it wraps around and counts upwards from 0; overflow information is not in general retained. An attribute value change notification may be defined for counters with wrap behaviour.

NOTE – The rule that the counter value can increase only in steps of 1 is a descriptive convention that simplifies the description of counter-threshold in 9.3.1. It does not imply that it will always be possible to observe each value in the counter's range, since the events counted may occur in rapid succession.

Not-settable counter-definition

attribute value

- single value.

inherent properties

- current value is a non-negative integer;
- it has a maximum value (see specification properties);
- the counting direction is up, with increment 1;
- the current value wraps around when it reaches its maximum;
- the initial value is 0.

permitted operations

- Get only.

implicit relations

- directly related to a single counter-threshold where applied;
- as an implementation option, may trigger a defined event when it wraps.

specification properties

- the internal event that is counted;
- maximum value;
- "estimated" wrap around period, to indicate necessary reading rate.

Settable counter definition

attribute value

- single value.

inherent properties

- current value is a non-negative integer;
- it has a maximum value (see specification properties);
- the counting direction is up, with increment 1;

- the current value wraps around when it reaches its maximum;
- the initial value is 0.

permitted operations

- Get;
- Set to arbitrary value (within range);
- Set to the default specified in the managed object definition, or to zero otherwise.

implicit relations

- directly related to a single counter-threshold, where applied;
- as an implementation option, may trigger a defined event when it wraps or its value is otherwise changed except by the normal counting process.

specification properties

- the internal event that is counted;
- maximum value;
- "estimated" wrap around period, to indicate necessary reading rate.

counter ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.Count;
 MATCHES FOR EQUALITY,ORDERING ;;

9.2 Gauge

The semantics of the **gauge** attribute type is defined below.

The gauge is the management abstraction of the value of a dynamic variable, such as the number of connections currently operated by a protocol machine or the rate of change of a traffic counter. There is no restriction on what the dynamic variable may be, within the constraints set out below.

The value of the gauge is subject to change in either direction. The value of the increment or decrement is unconstrained, except that changes that would take the gauge value beyond its maximum or minimum leave the gauge value at its maximum or minimum respectively.

In order to support use by multiple managing stations, gauges are defined to be read-only.

attribute value

- single value.

inherent properties

- current value is a non-negative integer or real (see specification properties);
- it has a maximum and a minimum value (see specification properties);
- it may increase or decrease by arbitrary amounts;
- it does not wrap around.

permitted actions

- Get only.

implicit relations

- directly related to a tide-mark and or gauge-threshold, where applied;
- only one minimum and one maximum tide-mark may be applied;
- only one (possibly multi-level) threshold may be applied;
- can be used to measure other management information.

specification properties

- the dynamic variable measured, with its type: integer or real;
- maximum and minimum value.

gauge ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ObservedValue;
 MATCHES FOR EQUALITY, ORDERING ;;

9.3 Threshold

A threshold is the general mechanism for generating a defined notification from changes in numeric attributes values. Two types of thresholds are defined, for counters and for gauges, because the required behaviour is significantly different in the two cases. Both allow attribute values that are of integer data types. Other types of threshold may be defined in the future.

9.3.1 Counter-threshold

The **counter-Threshold** is the general mechanism for generating a defined notification from changes in any value of attribute type counter.

The Counter-Threshold is related to a defined notification. It has the basic property that the defined notification is triggered when the value of the count becomes equal to the comparison level of the threshold. The definition also allows for more complex styles of operation when needed: the comparison attribute is in general a set of levels, for example to represent different degrees of severity of a fault condition, and the notification is triggered whenever the count value reaches any of the levels.

In addition, an offset mechanism is also available to allow particular counting intervals to be detected, as follows. If the offset value is not zero, whenever the threshold is triggered by the counter value reaching a comparison level, that comparison level is incremented by the offset value. This is regarded as taking place instantaneously, i.e. before the count is incremented. Thus, for each level, the threshold triggers a notification every time the count increases by an interval equal to the offset value. When the comparison value exceeds the modulus of the counter, it wraps around.

For a counter-threshold, the time at which the threshold offset was last applied, or the time at which the count was last initialized is the arm-time.

The Counter-Threshold is modelled as a set-valued attribute.

value type

- comparison level, integer;
- offset value, integer;
- notifications on/off switch, boolean.

inherent properties

- the comparison levels are non-negative integers;
- the offset values are non-negative integers;
- the notifications switch is on or off.

permitted operations

- Get, Set, Add, Remove.

implicit relations

- directly related to a single count;
- directly related to a defined notification.

specification properties

- count to which it applies;
- the defined notification that may be triggered.

Any relationship between a threshold attribute and any underlying mechanism is specified as part of the behaviour of the managed object class containing the threshold.

counter-Threshold ATTRIBUTE
 WITH ATTRIBUTE SYNTAX
 Attribute-ASN1Module.CounterThreshold;
 MATCHES FOR EQUALITY ;;

9.3.2 Gauge-threshold

The **gauge-Threshold** is the general mechanism for generating one or more defined notifications from changes in any value of attribute type gauge. A hysteresis mechanism is provided to avoid the repeated triggering of event notifications when the gauge makes small oscillations around a threshold value. This capability is provided by specifying threshold values in pairs; one being a high threshold value and the other being a low threshold value. The difference between threshold values is the hysteresis interval.

The Gauge-Threshold is a set-valued attribute used to define threshold levels associated with notifications. As a set valued attribute, it may have zero or more members. Each member consists of a sequence of two submembers, **notifyLow** and **notifyHigh**. Each of these submembers in turn has a structure and consists of a sequence of a gauge value and its associated on/off switch.

notifyHigh: This structured submember defines the value that the gauge must reach or exceed in order to optionally generate notification, together with a switch value that controls the generation of the notification.

notifyLow: This structured submember defines the value that the gauge must fall to or below in order to optionally generate notification, together with a switch value that controls the generation of the notification.

Gauge-Thresholds have the constraint that **notifyHigh** has a gauge value that is greater than or equal to that of **notifyLow**.

Gauge-Thresholds have the following constraints

- **notify-high's** gauge value and **notify-low's** threshold value are of the same type as the gauge;
- **notify-high's** threshold value is greater or equal to **notify-low's** threshold value;
- **notify-high's** on/off switch and **notify-low's** on/off switch are of type boolean.

Gauge-Thresholds have the following behaviour

- initially, if **notify-high's** on/off switch is true and the gauge value becomes equal to or greater than **notify-high's** gauge value, in a positive going direction, then the defined event notification is triggered; subsequent crossings of **notify-high's** gauge value shall not cause further generation of event reports unless the gauge value becomes equal to or less than **notify-low's** threshold value.
- initially, if **notify-low's** on/off switch is true and the gauge value becomes equal to or less than **notify-low's** gauge value, in a negative going direction, then the defined event notification is triggered; subsequent crossings of **notify-low's** gauge value shall not cause further generation of event reports unless the gauge value becomes equal to or greater than **notify-high's** gauge value.

For either case, the time at which the notification is again enabled is defined as the arm-time.

Any relationship between a threshold attribute and any underlying mechanism is specified as part of the behaviour of the managed object class containing the threshold.

gauge-Threshold ATTRIBUTE
WITH ATTRIBUTE SYNTAX `Attribute-ASN1Module.GaugeThreshold`;
MATCHES FOR EQUALITY ;;

9.4 Tide-mark

The semantics of the **TideMark** attribute type is defined below.

The tide-mark is a mechanism that records the maximum or minimum value reached by a gauge during a measurement period. A tide-mark is essentially read-only, except that it may be reset to a desired value which is the current value of the associated gauge. Each individual tide-mark is specified to be either a maximum tide-mark or a minimum tide-mark, and therefore moves (other than when it is reset) only up or down respectively. Thus, a maximum tide-mark changes (increases) only when its gauge increases beyond the current tide-mark value, and a minimum tide-mark changes (decreases) only when its gauge moves below the current tide-mark value.

A tide-mark is defined as a set-valued attribute with three components. Two value components are defined, the current value and the value immediately prior to the last reset, so as to support different measurement requirements. The third component is the last reset time.

attribute value

- current value of tide-mark;
- former value of tide-mark, i.e. value immediately before the last reset;

- last reset time.

inherent properties

- it is associated with a gauge;
- it has a direction (maximum or minimum);
- the current and former values are integer or real depending upon the associated gauge.

permitted operations

- Get returns the entire attribute value, viz. the current value, the former value and the last reset time;
- Set to default sets the former value to the current value, the current value to the value of the associated gauge, and the last reset time to the current time.

implicit relations

- directly related to a gauge;
- may be directly related to a defined event that is triggered when the current value changes.

specification properties

- gauge to which it applies;
- direction (maximum or minimum).

10 Definition of specific attribute types

This Recommendation | International Standard defines a number of attributes which are referenced by the System Management Functions of CCITT Recs. X.730 - 736 | ISO/IEC 10164 Parts 1 to 7, or which are of widespread applicability in Managed Object definitions. Unlike the attribute types defined in clause 9, the definitions here are directly useable in the definitions of Managed Objects without further elaboration. In particular they include an object identifier by which the attribute is identified. It follows that any of these attributes can only appear once in a Managed Object. Uses of these attributes in Managed Objects may also refine the definition, for example

- to extend the behaviour definition to relate the behaviour to the operation of the resource represented by the Managed Object;
- to restrict the values which the attribute may take to a subset of those defined by the attribute type;
- to require support for some values of the type;
- to define relations (such as mutual constraints on permitted values) with other attributes.

The template definition along with the allocated object identifier are specified below for each attributes type. The ASN.1 supporting productions are defined in 13.2.

10.1 Attributes types used for naming

The following attributes can be used as naming attributes in a relative distinguished name.

10.1.1 Discriminator Id

The **discriminatorId** attribute type is used in naming instances of Discriminator managed object class.

10.2 Counter

This Recommendation | International Standard defines a number of counter types which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no counter types currently defined in the system management functions and this subclause is a place holder for future additions. Annex A defines a number of specific counter attributes generally useful to layer management.

10.3 Counter-threshold

This Recommendation | International Standard defines a number of counter-threshold types which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no counter-threshold types currently defined in the system management functions and this subclause is a place holder for future additions. Annex A defines a number of specific counter-threshold attributes generally useful to layer management.

10.4 Gauge

This Recommendation | International Standard defines a number of Gauge types which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no Gauge types currently defined in the system management functions and this subclause is a place holder for future additions.

10.5 Gauge-threshold

This Recommendation | International Standard defines a number of Gauge-Threshold types which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no gauge threshold types currently defined in the system management functions and this subclause is a place holder for future addition.

10.6 Tide-mark

This Recommendation | International Standard defines a number of Tide-Mark types which are referenced by the System Management Functions of CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no tide-mark types currently defined in the system management functions and this subclause is a place holder for future addition.

10.7 Miscellaneous attribute types

10.7.1 Events related

10.7.1.1 Additional information

The semantics of the **additionalInformation** attribute type are specified in the Additional Information parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

    DEFINED AS      "This attribute contains a list of attribute identifiers and their values.";;
```

REGISTERED AS {smi2AttributeID 9};

10.7.1.5 Attribute value change definition

The semantics of the **attributeValueChangeDefinition** attribute type are defined in the Attribute Value Change definition parameter in CCITT Rec. X.730 | ISO/IEC 10164-1.

```
attributeValueChangeDefinition    ATTRIBUTE
    WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AttributeValueChangeDefinition;
    BEHAVIOUR
    attributeValueChangeDefinitionBehaviour    BEHAVIOUR
    DEFINED AS      "This attribute contains a set of attribute identifiers and their old and new values.";;
```

REGISTERED AS {smi2AttributeID 10};

10.7.1.6 Backed-up status

The semantics of the **backedUpStatus** attribute type are specified in the Backed-up Status parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

```
backedUpStatus    ATTRIBUTE
    WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.BackedUpStatus;
    MATCHES FOR EQUALITY ;
```

REGISTERED AS {smi2AttributeID 11};

10.7.1.7 Correlated notifications

The semantics of the **correlatedNotifications** attribute type are specified in the Correlated Notifications parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

```
correlatedNotifications    ATTRIBUTE
    WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.CorrelatedNotifications;
    BEHAVIOUR
    correlatedNotificationsBehaviour    BEHAVIOUR
    DEFINED AS      "This attribute contains a set of notification identifiers and, if necessary, their associated managed object instance names, for the notifications that are considered to be correlated to this notification.";;
```

REGISTERED AS {smi2AttributeID 12};

10.7.1.8 Event time

The semantics of the **eventTime** attribute type are specified in the Event Time parameter in CCITT Rec. X.710 | ISO/IEC 9595.

```
eventTime      ATTRIBUTE
    WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.EventTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR    timeOrdering;
```

REGISTERED AS {smi2AttributeID 13};

timeOrdering BEHAVIOUR

DEFINED AS

"The year, month, day, hour, minute and seconds field are compared in order to determine whether the specified value is greater or less than the value of the attribute. The values for the year, month, day, hour, minute and seconds are determined from the character string representation and the year value is first compared. If equal the month value is compared and this process is continued if the compared fields are equal";

10.7.1.9 Event type

The semantics of the **eventType** attribute type are specified in the Event type parameter in CCITT Rec. X.710 | ISO/IEC 9595.

eventType **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.EventTypeId;
 MATCHES FOR EQUALITY ;

REGISTERED AS {smi2AttributeID 14};

10.7.1.10 Monitored attributes

The semantics of the **monitoredAttributes** attribute type are specified in the Monitored Attributes parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

monitoredAttributes **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.MonitoredAttributes;

REGISTERED AS {smi2AttributeID 15};

10.7.1.11 Notification identifier

The semantics of the **notificationIdentifier** attribute type are specified in the Notification identifier parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

notificationIdentifier **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.NotificationIdentifier;
 MATCHES FOR EQUALITY;
 BEHAVIOUR
 notificationIdentifierBehaviour **BEHAVIOUR**
 DEFINED AS "This attribute contains a unique identifier for the notification, which may be present in the correlated notifications attribute of other notifications.";;

REGISTERED AS {smi2AttributeID 16};

10.7.1.12 Perceived severity

The semantics of the **perceivedSeverity** attribute type are specified in the Perceived Severity parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

perceivedSeverity **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.PerceivedSeverity;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 17};

10.7.1.13 Probable cause

The semantics of the **probableCause** attribute type are specified in the Probable Cause parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

probableCause **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ProbableCause;
 MATCHES FOR EQUALITY ;

REGISTERED AS {smi2AttributeID 18};

10.7.1.14 Proposed repair actions

The semantics of the **proposedRepairActions** attribute type are specified in the Proposed Repair Action parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

proposedRepairActions ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ProposedRepairActions;
MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 19};

10.7.1.15 Relationship change definition

The semantics of the **relationshipChangeDefinition** attribute type are defined in the Relationship change definition parameter in CCITT Rec. X.732 | ISO/IEC 10164-3.

relationshipChangeDefinition ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AttributeValueChangeDefinition;
BEHAVIOUR
relationshipChangeDefinitionBehaviour BEHAVIOUR
DEFINED AS "This attribute contains a set of relationship attribute identifiers and their old and new values.";;

REGISTERED AS {smi2AttributeID 20};

10.7.1.16 Security alarm cause

The semantics of the **securityAlarmCause** attribute type are specified in the Security alarm cause parameter in CCITT Rec. X.736 | ISO/IEC 10164-7.

securityAlarmCause ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SecurityAlarmCause;
MATCHES FOR EQUALITY ;
BEHAVIOUR
securityAlarmCauseBehaviour BEHAVIOUR
DEFINED AS "This attribute specifies the cause of the security alarm";;

REGISTERED AS {smi2AttributeID 21};

10.7.1.17 Security alarm detector

The semantics of the **securityAlarmDetector** attribute type are specified in the Security alarm Detector parameter in CCITT Rec. X.736 | ISO/IEC 10164-7.

securityAlarmDetector ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SecurityAlarmDetector;
MATCHES FOR EQUALITY;
BEHAVIOUR
securityAlarmDetectorBehaviour BEHAVIOUR
DEFINED AS "This attribute identifies the entity that detected the security alarm";;

REGISTERED AS {smi2AttributeID 22};

10.7.1.18 Security alarm severity

The semantics of the **securityAlarmSeverity** attribute type are specified in the Security alarm severity parameter in CCITT Rec. X.736 | ISO/IEC 10164-7.

securityAlarmSeverity ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SecurityAlarmSeverity;
MATCHES FOR EQUALITY;
BEHAVIOUR
securityAlarmSeverityBehaviour BEHAVIOUR
DEFINED AS "This attribute indicates the severity of the security alarm";;

REGISTERED AS {smi2AttributeID 23};

10.7.1.19 Service provider

The semantics of the **serviceProvider** attribute type are specified in the Service provider parameter in CCITT Rec. X.736 | ISO/IEC 10164-7.

serviceProvider ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ServiceProvider;
 MATCHES FOR EQUALITY;
 BEHAVIOUR
 serviceProviderBehaviour BEHAVIOUR
 DEFINED AS "This attribute contains information about the service provider associated with the service request that caused the security alarm";;

REGISTERED AS {smi2AttributeID 24};

10.7.1.20 Service user

The semantics of the **serviceUser** attribute type are specified in the Service user parameter in CCITT Rec. X.736 | ISO/IEC 10164-7.

serviceUser ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ServiceUser;
 MATCHES FOR EQUALITY ;
 BEHAVIOUR
 serviceUserBehaviour BEHAVIOUR
 DEFINED AS "This attribute contains information about the service user associated with the service request that caused the security alarm";;

REGISTERED AS {smi2AttributeID 25};

10.7.1.21 Source indicator

The semantics of the **sourceIndicator** attribute type are defined in the Source Indicator parameter in CCITT Rec. X.730 | ISO/IEC 10164-1.

sourceIndicator ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SourceIndicator;
 MATCHES FOR EQUALITY;
 BEHAVIOUR
 sourceIndicatorBehaviour BEHAVIOUR
 DEFINED AS "This attribute is used in notifications to indicate the source of the operation that resulted in generating the notification";;

REGISTERED AS {smi2AttributeID 26};

10.7.1.22 Specific problems

The semantics of the **specificProblems** attribute type are specified in the Specific Problems parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

specificProblems ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SpecificProblems;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION ;

REGISTERED AS {smi2AttributeID 27};

10.7.1.23 State change definition

The semantics of the **stateChangeDefinition** attribute type are defined in the State change definition parameter in CCITT Rec. X.731 | ISO/IEC 10164-2.

stateChangeDefinition ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AttributeValueChangeDefinition;
 BEHAVIOUR
 stateChangeDefinitionBehaviour BEHAVIOUR
 DEFINED AS "This attribute contains a set of state attribute identifiers and their old and new values.";;

REGISTERED AS {smi2AttributeID 28};

10.7.1.24 Threshold info

The semantics of the **thresholdInfo** attribute type are specified in the Threshold Info parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

thresholdInfo ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ThresholdInfo;

REGISTERED AS {smi2AttributeID 29};

10.7.1.25 Trend indication

The semantics of the **trendIndication** attribute type are specified in the Trend Indication parameter in CCITT Rec. X.733 | ISO/IEC 10164-4.

trendIndication ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.TrendIndication;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 30};

10.7.2 States related

10.7.2.1 Administrative state

The semantics of the **administrativeState** attribute type are specified in the Administrative State attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

administrativeState ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AdministrativeState;
 MATCHES FOR EQUALITY ;

REGISTERED AS {smi2AttributeID 31};

10.7.2.2 Alarm status

The semantics of the **alarmStatus** attribute type are specified in the Alarm Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

alarmStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AlarmStatus;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION ;

REGISTERED AS {smi2AttributeID 32};

10.7.2.3 Availability status

The semantics of the **availabilityStatus** attribute type are specified in the Availability Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

availabilityStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.AvailabilityStatus;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION ;

REGISTERED AS {smi2AttributeID 33};

10.7.2.4 Control status

The semantics of the **controlStatus** attribute type are specified in the Control Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

controlStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ControlStatus;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION ;

REGISTERED AS {smi2AttributeID 34};

10.7.2.5 Operational state

The semantics of the **operationalState** attribute type are specified in the Operational State attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

operationalState ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.OperationalState;
 MATCHES FOR EQUALITY ;

REGISTERED AS {smi2AttributeID 35};

10.7.2.6 Procedural status

The semantics of the **proceduralStatus** attribute type are specified in the Procedural Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

proceduralStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ProceduralStatus;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 36};

10.7.2.7 Standby status

The semantics of the **standbyStatus** attribute type are specified in the Standby Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

standbyStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.StandbyStatus;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 37};

10.7.2.8 Unknown status

The semantics of the **unknownStatus** attribute type are specified in the Unknown Status attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

unknownStatus ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.UnknownStatus;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 38};

10.7.2.9 Usage state

The semantics of the **usageState** attribute type are specified in the Usage State attribute in CCITT Rec. X.731 | ISO/IEC 10164-2.

usageState ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.UsageState;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 39};

10.7.2.10 State

The semantics of the **State** group attribute type are specified in the State attribute group in CCITT Rec. X.731 | ISO/IEC 10164-2.

state **ATTRIBUTE GROUP**
 DESCRIPTION " This is defined as an empty attribute group. The elements of this group are composed of state attributes in the managed object. The state attributes may include those specified in CCITT Rec. X.731|ISO/IEC 10164-2 and others that are specific to the managed object class.";

REGISTERED AS {smi2AttributeGroup 1};

10.7.3 Relationships related

10.7.3.1 Back-up object

The semantics of the **backUpObject** attribute type are specified in Back-Up Object relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3. This attribute is also used in CCITT Rec. X.733 | ISO/IEC 10164-4.

backUpObject **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.BackUpRelationshipObject;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 40};

10.7.3.2 Backed-up object

The semantics of the **backedUpObject** attribute type are specified in Backed-Up Object relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

backedUpObject **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.BackUpRelationshipObject;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 41};

10.7.3.3 Member

The semantics of **member** attribute type are specified in Member relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

member **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.GroupObjects;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 42};

10.7.3.4 Owner

The semantics of **owner** attribute type are specified in Owner relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

owner **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.GroupObjects;
 MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 43};

10.7.3.5 Peer

The semantics of **peer** attribute type are specified in Peer relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

peer **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.BackUpRelationshipObject;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 44};

10.7.3.6 Primary

The semantics of **primary** attribute type are specified in Primary relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

primary **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.PrioritisedObject;

REGISTERED AS {smi2AttributeID 45};

10.7.3.7 Provider object

The semantics of **providerObject** attribute type are specified in Provider Object relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

providerObject **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.PrioritisedObject;

REGISTERED AS {smi2AttributeID 46};

10.7.3.8 Relationships

The semantics of the **relationships** group attribute type are specified in the Relationships group attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

relationships **ATTRIBUTE GROUP**
 DESCRIPTION " This is defined as an empty attribute group. The elements of this group are composed of relationship attributes in the managed object. The relationship attributes may include those specified in CCITT Rec. X.732 | ISO/IEC 10164-3 and others that are specific to the managed object class.";

REGISTERED AS {smi2AttributeGroup 2};

10.7.3.9 Secondary

The semantics of **secondary** attribute type are used in defining Secondary relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

secondary **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.PrioritisedObject;

REGISTERED AS {smi2AttributeID 47};

10.7.3.10 User object

The semantics of **userObject** attribute type are used in defining User Object Relationship attribute in CCITT Rec. X.732 | ISO/IEC 10164-3.

userObject **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.PrioritisedObject;

REGISTERED AS {smi2AttributeID 48};

10.7.4 Other attribute types

10.7.4.1 Active destination

The semantics of the **activeDestination** attribute type are specified in the Active destination attribute in CCITT Rec. X.734 | ISO/IEC 10164-5.

activeDestination **ATTRIBUTE**
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ActiveDestination;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 49};

10.7.4.2 Allomorphs

The **allomorphs** attribute appears in a managed object if and only if that managed object supports allomorhism.

allomorphs ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.Allomorphs;
MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 50};

10.7.4.3 Back-up destination list

The semantics of the **backUpDestinationList** attribute type are specified in the Backup destination list attribute in CCITT Rec. X.734 | ISO/IEC 10164-5.

backUpDestinationList ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.BackUpDestinationList;
MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 51};

10.7.4.4 Capacity alarm threshold

The semantics of the **capacityAlarmThreshold** attribute type are specified in the Capacity Alarm Threshold attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

capacityAlarmThreshold ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.CapacityAlarmThreshold;
MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 52};

10.7.4.5 Confirmed mode

The semantics of the **confirmedMode** attribute type are specified in the Confirmed mode attribute in CCITT Rec. X.734 | ISO/IEC 10164-5.

confirmedMode ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ConfirmedMode;
MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 53};

10.7.4.6 Current log size

The semantics of the **currentLogSize** attribute type are specified in the Current Log Size attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

currentLogSize ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.CurrentLogSize;
MATCHES FOR EQUALITY, ORDERING;

REGISTERED AS {smi2AttributeID 54};

10.7.4.7 Destination

The semantics of the **destination** attribute type are specified in the Destination Address attribute in CCITT Rec. X.734 | ISO/IEC 10164-5.

destination ATTRIBUTE
WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.Destination;
MATCHES FOR EQUALITY ;

REGISTERED AS {smi2AttributeID 55};

10.7.4.8 Discriminator construct

The semantics of the **discriminatorConstruct** attribute type are specified in the Discriminator Construct attribute in CCITT Rec. X.734 | ISO/IEC 10164-5.

discriminatorConstruct ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.DiscriminatorConstruct;
 REGISTERED AS {smi2AttributeID 56};

10.7.4.9 Intervals of day

The semantics of the **intervalsOfDay** attribute type are specified in the Daily Scheduling package in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

intervalsOfDay ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.IntervalsOfDay;
 REGISTERED AS {smi2AttributeID 57};

10.7.4.10 Log full action

The semantics of the **logFullAction** attribute type are specified in the Log Full Action attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

logFullAction ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.LogFullAction;
 MATCHES FOR EQUALITY ;
 REGISTERED AS {smi2AttributeID 58};

10.7.4.11 Logging time

The semantics of the **loggingTime** attribute type are specified in the Logging Time attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

loggingTime ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.LoggingTime;
 MATCHES FOR EQUALITY, ORDERING;
 REGISTERED AS {smi2AttributeID 59};

10.7.4.12 Managed object class

The **managedObjectClass** attribute type is specified to allow filtering of the Managed Object Class parameter when events reports are logged as records.

managedObjectClass ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ObjectClass;
 MATCHES FOR EQUALITY;
 REGISTERED AS {smi2AttributeID 60};

10.7.4.13 Managed object instance

The **managedObjectInstance** attribute type is specified to allow filtering of the Managed Object Instance parameter when events reports are logged as records.

managedObjectInstance ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ObjectInstance;
 MATCHES FOR EQUALITY;
 REGISTERED AS {smi2AttributeID 61};

10.7.4.14 Max log size

The semantics of the **maxLogSize** attribute type are specified in the Max Log Size attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

maxLogSize ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.MaxLogSize;
 MATCHES FOR EQUALITY, ORDERING ;

BEHAVIOURmaxSizeOrderingBehaviour **BEHAVIOUR**

DEFINED AS " The ordering is the same as for sequentially increasing positive integers except that a value of zero is largest and denotes infinite size.";;

REGISTERED AS {smi2AttributeID 62};

10.7.4.15 Name binding

The **nameBinding** attribute appears in every managed object and identifies the name binding with which the managed object was instantiated. The semantics of this attribute are described in CCITT Rec. X.720 | ISO/IEC 10165-1.

nameBinding **ATTRIBUTE**

WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.NameBinding;

MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 63};

10.7.4.16 Number of records

The semantics of the **numberOfRecords** attribute type are specified in the Number of Records attribute in CCITT Rec. X.735 | ISO/IEC 10164-6.

numberOfRecords **ATTRIBUTE**

WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.NumberOfRecords;

MATCHES FOR EQUALITY, ORDERING ;

REGISTERED AS {smi2AttributeID 64};

10.7.4.17 Object class

The **objectClass** attribute appears in every managed object and indicates the managed object class to which the managed object belongs. The semantics of ordering on object classes are described in CCITT Rec. X.720 | ISO/IEC 10165-1.

objectClass **ATTRIBUTE**

WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ObjectClass;

MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 65};

10.7.4.18 Packages

The **packages** attribute appears in every managed object in which any registered package, other than the packagePackage has been instantiated.

packages **ATTRIBUTE**

WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.Packages;

MATCHES FOR EQUALITY, SET-COMPARISON, SET-INTERSECTION;

REGISTERED AS {smi2AttributeID 66};

10.7.4.19 Scheduler name

The semantics of **schedulerName** attribute type are specified in the External Scheduler scheduling package in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

schedulerName **ATTRIBUTE**

WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.ObjectInstance;

MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 67};

10.7.4.20 Start time

The semantics of **startTime** attribute type are specified in the Weekly Scheduling package in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

startTime ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.StartTime;
 MATCHES FOR EQUALITY, ORDERING;
 BEHAVIOUR timeOrdering;

REGISTERED AS {smi2AttributeID 68};

10.7.4.21 Stop time

The semantics of **stopTime** attribute type are specified in the Weekly Scheduling package in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6. The matching criterion "Ordering" is applicable only when the ASN.1 type GeneralizedTime choice is selected for StopTime.

stopTime ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.StopTime;
 MATCHES FOR EQUALITY, ORDERING;
 BEHAVIOUR timeOrdering;

REGISTERED AS {smi2AttributeID 69};

10.7.4.22 Supported Features

The semantics of the **supportedFeatures** attribute type are given below.

supportedFeatures ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.SupportedFeatures;
 MATCHES FOR SET-COMPARISON, SET-INTERSECTION, EQUALITY;
 BEHAVIOUR
 supportedFeaturesBehaviour BEHAVIOUR
 DEFINED AS "This attribute is used to identify features within the system that are capable of being managed. The registration of each feature is performed by the development authority for the feature and will typically identify a specification in which the details of what can be managed are provided";;

REGISTERED AS {smi2AttributeID 70};

10.7.4.23 Week mask

The semantics of **weekMask** attribute type are specified in the Weekly Scheduling package in CCITT Rec. X.734 | ISO/IEC 10164-5 and CCITT Rec. X.735 | ISO/IEC 10164-6.

weekMask ATTRIBUTE
 WITH ATTRIBUTE SYNTAX Attribute-ASN1Module.WeekMask;
 MATCHES FOR EQUALITY;

REGISTERED AS {smi2AttributeID 71};

11 Definition of action types

This Recommendation | International Standard defines a number of action types which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7.

NOTE – There are no action types currently defined in the system management functions and this section is a place holder for future addition.

12 Definition of parameters

This Recommendation | International Standard defines a number of parameters which are referenced by the System Management Functions in CCITT Recs. X.730-736 | ISO/IEC 10164 Parts 1 to 7. The definition of parameter template is specified in CCITT Rec. X.722 | ISO/IEC 10165-4.

The **miscellaneousError** parameter is included in this Recommendation | International Standard as a possible specific error when processing failure is reported using CMIP linked reply mechanism. This may be imported in any managed object class definition .

miscellaneousError PARAMETER

CONTEXT SPECIFIC-ERROR;

WITH SYNTAX Parameter-ASN1Module.MiscellaneousError;

BEHAVIOUR

miscellaneousErrorBehaviour BEHAVIOUR

DEFINED AS " When a processing error failure has occurred and the error condition encountered does not match any of the object's defined specific error types, this value is used.";;

REGISTERED AS {smi2Parameter 1};

13 Definition of notification types

This Recommendation | International Standard defines a number of notification types which are applicable to a wide variety of managed object classes.

Each notification type definition comprises

- the structure of the notification data carried in the management protocol;
- the behaviour of the notification;
- the structure of the notification result data carried in the management protocol;
- assignment of an object identifier value.

The template definition along with the allocated object identifier are specified below for each notification type. The ASN.1 supporting productions are defined in 14.3.

13.1 Attribute value change

The semantics of the **attributeValueChange** notification type are specified in CCITT Rec. X.730 | ISO/IEC 10164-1.

attributeValueChange NOTIFICATION

smi2Parameter OBJECT IDENTIFIER ::= {joint-iso-ccitt ms(9) smi(3) part2(2) parameter(5)}

MiscellaneousError ::= NULL

END

15 Conformance and compliance

15.1 Conformance

This Recommendation | International Standard does not specify any conformance requirements placed on open systems.

15.2 Compliance

Where other CCITT Recommendations | International Standards refine any of the managed object class definitions contained in this Recommendation | International Standard via the refinement and referencing mechanisms defined in CCITT Rec. X.722 | ISO/IEC 10165-4, the managed object classes that refine these definitions shall comply with the behavioural and syntactic aspects of the superclass as defined in this Recommendation | International Standard.

Where other CCITT Recommendations | International Standards import any of the definitions contained in this Recommendation | International Standard into attribute type or managed object class or notification type definitions via the referencing mechanism defined in CCITT Rec. X.722 | ISO/IEC 10165-4, the attribute type or managed object class or notification type definitions that reference these definitions shall comply with the behavioural and syntactic aspects of those types as specified in this Recommendation | International Standard.

Annex A

Counters and counter threshold attribute

(This Annex forms an integral part of this Recommendation | International Standard)

A.1 Counter

This Annex defines a number of counter types which are useful for importing in other standards.

A.1.1 Corrupted PDUs received counter

The attribute type **corruptedPDUsReceivedCounter** specifies the total number of corrupted PDUs received.

corruptedPDUsReceivedCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 72};

A.1.2 Incoming connection reject error counter

The attribute type **IncomingConnectionRejectErrorCounter** specifies the total number of incoming connection requests which were received by the managed object but rejected due to protocol errors.

incomingConnectionRejectErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 73};

A.1.3 Incoming connection requests counter

The attribute type **incomingConnectionRequestsCounter** specifies the total number of incoming connection requests.

incomingConnectionRequestsCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 74};

A.1.4 Incoming disconnect counter

The attribute type **incomingDisconnectCounter** specifies the total number of incoming disconnect requests received by the managed object.

incomingDisconnectCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 75};

A.1.5 Incoming disconnect error counter

The attribute type **incomingDisconnectErrorCounter** specifies the total number of incoming disconnect requests received by the managed object due to protocol errors.

incomingDisconnectErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 76};

A.1.6 Incoming protocol error counter

The attribute type **incomingProtocolErrorCounter** specifies the total number of error report or reset PDUs which were received by the managed object due to protocol errors.

incomingProtocolErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 77};

A.1.7 Octets received counter

The attribute type **octetsReceivedCounter** specifies the total number of user data octets received by the managed object.

octetsReceivedCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 78};

A.1.8 Octets retransmitted error counter

The attribute type **octetsRetransmittedErrorCounter** specifies the total number of octets retransmitted by the managed object.

octetsRetransmittedErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 79};

A.1.9 Octets sent counter

The attribute type **octetsSentCounter** specifies the total number of user data octets sent by the managed object.

octetsSentCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 80};

A.1.10 Outgoing connection reject error counter

The attribute type **outgoingConnectionRejectErrorCounter** specifies the total number of outgoing connection requests which were sent by the managed object but rejected due to protocol errors.

outgoingConnectionRejectErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 81};

A.1.11 Outgoing connection requests counter

The attribute type **outgoingConnectionRequestsCounter** specifies the total number of outgoing connection requests.

outgoingConnectionRequestsCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 82};

A.1.12 Outgoing disconnect counter

The attribute type **outgoingDisconnectCounter** specifies the total number of outgoing disconnect requests processed by the managed object.

outgoingDisconnectCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 83};

A.1.13 Outgoing disconnect error counter

The attribute type **outgoingDisconnectErrorCounter** specifies the total number of outgoing disconnect requests sent by the managed object due to protocol errors.

outgoingDisconnectErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 84};

A.1.14 Outgoing protocol error counter

The attribute type **outgoingProtocolErrorCounter** specifies the total number of error report or reset PDUs which were sent by the managed object due to protocol errors.

outgoingProtocolErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 85};

A.1.15 PDUs received counter

The attribute type **pdusReceivedCounter** specifies the total number of PDUs received by the managed object.

pdusReceivedCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 86};

A.1.16 PDUs retransmitted error counter

The attribute type **pdusRetransmittedErrorCounter** specifies the total number of PDUs retransmitted by the managed object.

pdusRetransmittedErrorCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 87};

A.1.17 PDUs sent counter

The attribute type specifies **pdusSentCounter** the total number of PDUs sent by the managed object.

pdusSentCounter ATTRIBUTE
DERIVED FROM counter;

REGISTERED AS { smi2AttributeID 88};

A.2 Counter-threshold

A.2.1 Corrupted PDUs received threshold

The attribute type **corruptedPDUsReceivedThreshold** specifies a counter-threshold which is associated with the PDUs Corrupted PDUs Received counter attribute type.

corruptedPDUsReceivedThreshold ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 89};

A.2.2 Incoming connection reject error threshold

The attribute type **incomingConnectionRejectErrorThreshold** specifies a counter-threshold which is associated with the Incoming ConnectionRejectError counter attribute type.

incomingConnectionRejectErrorThreshold ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 90};

A.2.3 Incoming connection requests threshold

The attribute type **incomingConnectionRequestsThreshold** specifies a counter-threshold which is associated with the Incoming Connection Requests counter attribute type.

incomingConnectionRequestsThreshold
ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 91};

A.2.4 Incoming disconnect error threshold

The attribute type **incomingDisconnectErrorThreshold** specifies a counter-threshold which is associated with the Incoming Disconnect Error counter attribute type.

incomingDisconnectErrorThreshold
ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 92};

A.2.5 Incoming protocol error threshold

The attribute type **incomingProtocolErrorThreshold** specifies a counter-threshold which is associated with the Incoming Protocol Error counter attribute type.

incomingProtocolErrorThreshold ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 93};

A.2.6 Octets received threshold

The attribute type **octetsReceivedThreshold** specifies a counter-threshold which is associated with the Octets Received counter attribute type.

octetsReceivedThreshold ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 94};

A.2.7 Octets retransmitted threshold

The attribute type **octetsRetransmittedThreshold** specifies a counter threshold which can be associated with the octets retransmitted counter attribute type.

octetsRetransmittedThreshold
ATTRIBUTE
DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 95};

A.2.8 Octets sent threshold

The attribute type **octetsSentThreshold** specifies a counter-threshold which is associated with the Octets Sent counter attribute type.

octetsSentThreshold ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 96};

A.2.9 Outgoing connection reject error threshold

The attribute type **outgoingConnectionRejectErrorThreshold** specifies a counter-threshold which is associated with the Outgoing Connection Reject Error counter attribute type.

outgoingConnectionRejectErrorThreshold
 ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 97};

A.2.10 Outgoing connection requests threshold

The attribute type **outgoingConnectionRequestsThreshold** specifies a counter-threshold which is associated with the Outgoing Connection Requests counter attribute type.

outgoingConnectionRequestsThreshold
 ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 98};

A.2.11 Outgoing disconnect error threshold

The attribute type **outgoingDisconnectErrorThreshold** specifies a counter-threshold which is associated with the Outgoing Disconnect Error counter attribute type.

outgoingDisconnectErrorThreshold
 ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 99};

A.2.12 Outgoing protocol error threshold

The attribute type **outgoingProtocolErrorThreshold** specifies a counter-threshold which is associated with the Outgoing Protocol Error counter attribute type.

outgoingProtocolErrorThreshold
 ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 100};

A.2.13 PDUs received threshold

The attribute type **pdusReceivedThreshold** specifies a counter-threshold which is associated with the PDUs Received counter attribute type.

pdusReceivedThreshold ATTRIBUTE
 DERIVED FROM counter-Threshold;

REGISTERED AS { smi2AttributeID 101};
