Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 5 to ISO/IEC 10373-6:2001 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 17, *Cards and personal identification*.

Add the following new Annex J:

Annex J (normative)

High bit rate selection test methods for PCD

J.1 Apparatus

In this test the PCD-test-apparatus shall be configurable to change the bit rate during the test procedure. Tester shall be able to measure the bit rate used by the PCD on each stage of this test procedure.

J.2 Procedure

Place the PCD-test-apparatus into the field of the PCD.

J.2.1 Procedure for Type A

The following procedure shall be repeated for all values of interface byte TA(1) defined in Table J.1:

- a) Run through activation sequence as defined in ISO/IEC 14443-3.
- b) The PCD shall send a RATS command as defined in ISO/IEC 14443-4.
- c) The PCD-test-apparatus answers with a valid ATS including TA(1) according to Table J.1.
- d) The PCD may optionally send a PPS with a valid parameter setting for PPS1 byte according to Table J.1.
- e) If the PCD has sent a PPS then the PCD-test-apparatus acknowledges the received PPS with a valid PPS response.
- f) The PCD shall send $I(0)_0$ block using the bit rate selected.

NOTE This block may also be $I(1)_0$, or R(NACK) in case of PICC presence check method 2a.

- g) The PCD-test-apparatus sends a valid response using the bit rate selected. Check, if the answer from the PCD-test apparatus is accepted by the PCD.

^a PPS command is useless in this case and may not be supported by the PICC.	

Scenario J.1 — High bit rate selection, type A, Procedure 1

J.2.1.1 Expected result

The PCD shall behave as described in Scenario J.1 in each of the 72 test cases.

J.2.1.2 Test report

If the PCD behaves valid according to Scenario J.1 in each of the 72 test cases, then this test passed. The test report should document the bit rates chosen by the PCD in each of the 72 test cases.

J.2.2 Procedure for type B

The following procedure shall be repeated for all values of the protocol info byte Bit_Rate_capability defined in Table J.2:

- a) The PCD shall send a valid REQB Command frame.
- b) The PCD-test-apparatus answers with a valid ATQB including Bit_Rate_capability byte according to Table J.2.
- c) The PCD shall send an ATTRIB command with a valid parameter setting for Param2 byte according to Table J.2.
- d) The PCD-test-apparatus acknowledges the received ATTRIB with a valid Answer to ATTRIB Command.
- e) PCD shall send I(0)₀ block using the bit rate selected with Param2.

NOTE This block may also be I(1)₀, or R(NACK) in case of PICC presence check method 2a.

- f) The PCD-test-apparatus sends a valid response using the bit rate selected with Param2. Check, if the answer from the PCD-test apparatus is accepted by the PCD.
