Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#).

Amendment 2 to ISO/IEC 10646:2014 was prepared by Joint Technical Committee ISO/IEC JTC1, *Information technology*, Subcommittee SC 2, *Coded character sets*.

Information technology — Universal Coded Character Set (UCS)

AMENDMENT 2: Bhaiksuki, Marchen, Tangut and other characters

Page 5 Sub-clause 4.25 extended collection

In the Note 3, insert 'typically' between 'are' and 'referenced'.

Page 12 Sub-clause 6.4 Naming of character

In the list, insert the following new items after c) and adjust the next list item numbers accordingly:

d) follows the rule given in 25.7 for Tangut ideographs, or

Page 29 Sub-clause 23.1 List of source references

In the list of Hanzi G sources, insert the following new sources:

GFC Modern Chinese Standard Dictionary (现代汉语规范词典第二版。主编：李行健。北京：外语教学与研究出版社) 2010, ISBN : 978-7-5600-9518-9

GGFZ Tongyong Guifan Hanzi Zidian (通用规范汉字字典)

In the list of Kanji J sources, replace '2000' with '2004' for the J3 and J4 sources. Modify the J3A entry to read:

J3A JIS X 0213:2004 level-3 addendum from JIS X 0213:2000 level-3

Add the following entries:

J13 JIS X 0213:2004 level-3 characters replacing J1 characters

J13A JIS X 0213:2004 level-3 addendum from JIS X 0213:2000 level-3 replacing J1 characters

JA3 JIS X 0213:2004 level-3 characters replacing JA characters

J14 JIS X 0213:2004 level-4 characters replacing J1 characters

JA4 JIS X 0213:2004 level-4 characters replacing JA characters

Replace all J1 and JA sources that are also included in JIS X 0213:2004 by the values defined in JIS X 0213:2004 using the prefixes described above (J13, J13A, JA3, J14, and JA4). This represents 85 original JA sources and 2743 original J1 sources.

After the list of J sources, add the following notes:

NOTE 3 – When a source such as JIS X 0213:2004 includes encoded characters already included in older referenced sources, the more recent source references are typically used to reflect contemporary usage. This also reflects the fact that some of these more recent references were accompanied by minor adjustment for the graphic representation of the related characters.

NOTE 4 – J Sources that have been partially superseded (J1 and JA) are described in Annex A (see A.4.3 and A4.4). They can also be found as provisional sources in the Unihan Data base in <http://www.unicode.org/reports/tr38/> fully described as kJis1 for J1: JIS X 0212-1990 and kJA for the JA source.

In Table 5: Format details of the tags used in the source reference file for CJK Ideographs,

in the line for kIRG_GSource, insert the additional third field format values:

GFC-ddd, and GGFZ-dddddd.

in the line for kIRG_JSource, insert the additional third field format values:

J13-hhhh, J13A-hhhh, JA3-hhhh, J14-hhhh, and JA4-hhhh.

In the same Table 5, in the last row, remove the last sentence starting by “Only the first Radical-Stroke” from the fourth paragraph.

Insert new source references for the new 9 characters part of CJK Unified Ideographs.

Perform the additional updates to the source references:

- Move U+3D1D H source to U+2A3ED,
- Remove U+4CA4 H source (already moved to U+9FD0),
- Replace U+2AD12 U source with T source: TE-353F,
- Remove U+2B08F U source,
- Replace U+2F949 T source with U source: UCI-01199.

Provide a new reference file with updated references.

Page 32 Sub-clause 23.2 Source references file for CJK Ideographs

In the third paragraph starting with ‘The Format definition’, replace ‘LINE TABULATION control character (000B)’ by ‘CHARACTER TABULATION control character (0009)’.

Page 37 Before Clause 24 Character names and annotations

Insert new clause, table, and figure as follows, renumbering the following clauses, tables, and figures:

24 Source references for Tangut Ideographs

24.1 List of source references

A Tangut ideograph is always referenced by one source reference. These source references are provided in a machine-readable format that is accessible as a link from this document. The content pointed by these links is also normative.

The source reference information establishes the character identity for Tangut ideographs. A source reference is established by associating a Tangut ideograph code point with one value in the source standards listed below. The Tangut sources are:

H2004-A Hán Xiǎománg 2004 (PhD dissertation on the correct form of Tangut ideographs), H1 sub-division

H2004-B	Hán Xiǎománg 2004 (PhD dissertation on the correct form of Tangut ideographs), H2 sub-division
L1986	Lǐ Fànwén 1986 (Study of the Homophones)
L1997	Lǐ Fànwén 1997 (Tangut-Chinese Dictionary, 1 st edition)
L2006	Lǐ Fànwén 2006 (Comparative Study of Wuyin Qieyun and Wenhai Baoyun)
L2008	Lǐ Fànwén 2008 (Tangut-Chinese Dictionary, 2 nd edition)
N1966	Nishida 1966 (Little Dictionary of Tangut)
S1968	Sofronov 1968 (Grammar of the Tangut Language)

24.2 Source reference file for Tangut Ideographs

The content linked to is a plain text file, using ISO/IEC 646-IRV characters with CARRIAGE RETURN/ LINE FEED as end of line mark. The file specifies the sources references data for all Tangut Ideographs. The file also contains information concerning Radical-Stroke index. Each line in the text file contains the following information organized in three fields:

- 1st field: UCS code point in the format (U+hhhhh)
- 2nd field: Tag indicating the type of information in the third field (kTGT_MergedSrc, kRSTUnicode)
- 3rd field: Information corresponding to the tag value specified by the second field. The Table 6 provides the format details.

The format definition for the first field uses 'h' as a hexadecimal unit. The three fields are delimited by a CHARACTER TABULATION control character (0009). Comment lines, starting with a NUMBER SIGN ('#') are informational only. Comment lines and blank lines in the text file should be ignored by any automatic process which parses the data file to extract the source reference information.

Table 6: Format details of the tags used in the source reference file for Tangut ideographs

Tag Value	Tag description	Third field format
kTGT_MergedSrc	Tangut source	(H2004-A-dddd), (H2004-B-dddd), (L1986-dddd), (L1997-dddd), (L2006-dddd), (L2008-dddd), (L2008-dddd-dddd), (N1966-ddd-ddx), (N1966-ddd-ddxx), or (S1968-dddd)
kRSTUnicode	Radical Stroke index	d{1,3}.d{1,2})
The format definition uses 'd' as a decimal unit, and 'x' as an alphanumerical unit (0 to 9 and A to Z). Uppercase characters, digits and all other symbols between parentheses appear as shown. The Radical-Stroke index (d{1,3}.d{1,2}) is an informative field contains one construct: a radical index (one to three digits), followed by a full stop, and ending by one or two digits for the stroke count. The stroke count includes all strokes for the character, including the radical. The radical index is an entry on the Tangut Components block at 18800-18AFF, with the index '1' representing the code point 18800. NOTE – Concerning Lǐ Fànwén 2008 entries, the notation (L2008-dddd) denotes a character mapped to a single entry while the notation (L2008-dddd-dddd) denotes a character mapped to two entries.		

The following examples shows file entries for the Tangut ideographs 17000, 17001, 17A7A, and 17E91.

EXAMPLES

U+17000	kTGT_MergedSrc	L2008-0008
U+17000	kRSTUnicode	1.6

NOTE – The content is also available as a separate viewable file in the same file directory as this document. The file is named: "TangutSrc.txt".

24.3 Source reference presentation for Tangut Ideographs

The code charts for Tangut ideographs show one graphic symbol per character, along with additional information related to their identity such as radical, stroke count, and numeric value of the various source references.

The graphic representation for the radical is shown immediately below the code point, along with the radical number and the stroke count. That stroke count includes the radical itself.

NOTE – The radicals shown in this representation are part of the Tangut Components block at 18800-18AFF.

The figure 7 shows an example for characters 177D0-177D2, 177E4-177E6, 177F8-177FA, 1780C-1780E, and 17820-17822

Page 37 Clause 24 Character names and annotations

The clause is now renumbered 25. Insert one new sub-clause after 25.6 Character names for CJK Ideographs and renumber the following sub-clause accordingly.

25.7 Character names for Tangut Ideographs

For Tangut ideographs the names are algorithmically constructed by appending their coded representation in their five hexadecimal digit notation to "TANGUT IDEOGRAPH-". For example, the first Tangut Ideograph has the name "TANGUT IDEOGRAPH-17000".

Page 47 Sub-Clause 31.2 Code chart

The sub-clause is now renumbered 32.2. Replace the two last sentences starting with "Code charts" with: Code charts for CJK ideographs and Tangut ideographs have different formats. See Clause 23 and 24.

Page 2393, Annex A.4

Replace Annex A.4.2 and A.4.3 and insert new A.4.4 and A.4.6 sub-clauses as follows:

A.4.2 371 JIS2004 IDEOGRAPHICS EXTENSION

The fixed collection 371 JIS2004 IDEOGRAPHICS EXTENSION consists of all level 3 and level 4 CJK characters defined in JIS X 0213:2004. It contains 3 695 characters.

The code points of this collection are identified by J3 Kanji J sources (J3, J3A, J13, J13A, and JA3) and J4 Kanji J sources (J4, J14, and JA4) in the Source Reference file for CJK Unified Ideographs (CJKSrc.txt). See 23.1 and 23.2 for details.

A.4.3 372 JAPANESE IDEOGRAPHICS SUPPLEMENT

The fixed collection 372 JAPANESE IDEOGRAPHICS SUPPLEMENT consists of all CJK characters defined in JIS X 0212:1990. It contains 5 801 characters.

NOTE – 2 743 characters are common between the collections 371 and 372.

The code points of this collection are identified by the Kanji J sources: J1, J13, J13A, and J14 in the Source Reference file for CJK Unified Ideographs (CJKSrc.txt). See 23.1 for further details.

A.4.4 373 JAPANESE IT VENDORS CONTEMPORARY IDEOGRAPHS-1993

The fixed collection 373 JAPANESE IT VENDORS CONTEMPORARY IDEOGRAPHS-1993 consists of all CJK characters defined in the Unified Japanese IT Vendors Contemporary Ideographs, 1993 set. It contains 660 characters.

The code points of this collection are identified by the Kanji J sources: JA, JA3, and JA4 in the Source Reference file for CJK Unified Ideographs (CJKSrc.txt). See 23.1 for further details.

A.4.5 374 JAPANESE JIS X 0213:2004 IDEOGRAPHS FROM PREVIOUS JIS STANDARDS

The fixed collection 374 JAPANESE JIS X 0213:2004 IDEOGRAPHS FROM PREVIOUS JIS STANDARDS The set consists of 2828 characters, of which 2743 were part of JIS X 0212-1990 (referred as J1 sources in the previous version of this International Standard) and 85 were part of the 'Unified Japanese IT Vendors Contemporary Ideographs, 1993' (referred as JA in the previous version of this International Standard). Among these 2828 characters, 205 had their glyph representation slightly modified.

These 2828 characters use the 'J13, J13A, J14, JA3, and JA4' notations in their prefix four source identification as described in sub-clause 23.1.

NOTE 1 – Given its large size and the large number of sparse ranges, the collection is not specified by code point ranges in this document but instead by a linked content.

The content linked to is a plain text file, using ISO/IEC 646-IRV characters with CARRIAGE RETURN/ LINE FEED as end of line mark, which specifies, after a 7-lines header, as many lines as characters in the collection; each containing the following information in fixed length field:

- 1st field: BMP UCS code point (hhhh), normative.
- 2nd field: J Source reference in previous editions of this standard.
- 3rd field: J Source reference in this standard

The fields are delimited by a SPACE character; the format definition for the code point uses 'h' as a hexadecimal unit. The J Source references use the format specified in 23.2.

[Click on this highlighted text to access the reference file.](#)

NOTE 2 – The content is also available as a separate viewable file in the same file directory as this document. The file is named: "JIS-X-0213-FromPrevious".

In first paragraph, replace ‘and CJK ideographs’ with ‘, CJK ideographs, and Tangut ideographs’.

In the list of blocks, insert the following new block:

TANGUT

Insert each of the new character name entries at the appropriate position, ordered alphabetically by the character name, in the list of character names in Annex G. These new names are provided in a machine-readable format that is accessible as a link to this document.

[Click on this highlighted text to access the file containing the new names.](#)

NOTE – The content is also available as a separate viewable file in the same file directory as this document. The file is named: “Am2names.txt”.

Page 2423, Annex I.2

Replace the text from the sub-clause, starting from the first paragraph until the first Note with the following text:

An IDS consist of an IDC followed by a fixed number of Description Component (DC) organized in subgroups corresponding to script category, such as CJK ideographs or Tangut ideographs. An IDS should only use items belonging to a single subgroup, to clarify the script that it belongs to. The subgroups and their contents are as follows:

- CJK IDS, including DCs which may be of any one of the following:
 - a coded CJK ideographs, which consists of any coded character from the CJK UNIFIED IDEOGRAPHS block or the CJK COMPATIBILITY IDEOGRAPHS blocks,
 - a coded CJK radical, which consists of any coded character from the CJK RADICALS blocks or the KANGXI RADICALS block,
 - a coded stroke, which consists of any coded character from the CJK STROKES block,
 - the character FF1F FULL WIDTH QUESTION MARK to represent an otherwise un-described DC,
 - a private use character (as long as the interchanging parties have agreed that the particular private use character represents a particular CJK ideograph or component of a CJK ideograph),
 - another CJK IDS.
- Tangut IDS, including DCs which may be of any one of the following:
 - a Tangut Ideograph, which consists of any character from the TANGUT block,
 - a Tangut component, which consists of any coded character from the TANGUT COMPONENT block,
 - a coded stroke, which consists of any coded character from the CJK STROKES block,
 - another Tangut IDS.

NOTE 1 – The above description implies that any IDS may be nested within another IDS in same subgroup.

Insert new text after Table P.1:

The Japanese Industrial Standard JIS X 0213:2004 includes a set of characters which were part of previous JIS standards. The set consists of 2828 characters, of which 2743 were part of JIS X 0212-1990 (referred as J1 sources in the previous version of this International Standard) and 85 were part of the 'Unified Japanese IT Vendors Contemporary Ideographs, 1993' (referred as JA in the previous version of this International Standard). Among these 2828 characters, 205 had their glyph representation slightly modified. These 2828 characters use the 'J13, J13A, J14, JA3, and JA4' notations in their prefix four source identification as described in sub-clause 23.1. Their glyph representation also reflects the one shown in JIS X 0213:2004. The set of these 2828 characters is further defined as the fixed collection 374 (see A.4.5).

Page 2459, Annex S.1.6

Insert a new note before the first note, adjusting the consequent note numbers accordingly:

NOTE 1 – The characters from the J source: JIS X 0212-1990 encoded in this International Standard are listed in the collection 372 JAPANESE IDEOGRAPHICS SUPPLEMENT.

Insert a new note after the first note:

NOTE 2 – Seven pairs described below have J sources which were originally part of the JIS X 212-1990 level-3, therefore covered by the Source separation rule, which are also part of the JIS X 213:2004 with source identified as J13. The pairs (J13 character code points emphasized) are: **U+5861**-U+586B, U+6483-**U+64CA**, U+75E9-**U+7626**, **U+83D1**-U+8458, U+848B-**U+8523**, U+91A4-**U+91AC**, and **U+985A**-U+985B.
