## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/IEC JTC 1, *Information technology, SC 29, Coding of audio, picture, multimedia and hypermedia information*.

## Part 2: Spatial Audio Object Coding (SAOC)

### AMENDMENT 1: SAOC conformance

Add Clause 10, Conformance testing:

#### 10 Conformance testing

##### 10.1 Introduction

This Clause specifies conformance criteria for both bitstreams and decoders compliant with the SAOC standard as defined in Clauses 1 to 9. This is done to assist implementers and to ensure interoperability.

##### 10.2 Terms and definitions

The terms and definitions as stated in Clause 3 apply. Furthermore, the following terms and definitions will be used throughout this Clause.

|                                   |                                                       |
|-----------------------------------|-------------------------------------------------------|
| <b>Bitstream</b>                  | data encoded according to the SAOC standard           |
| <b>conformance test bitstream</b> | bitstream used for testing the conformance of an SAOC |

##### 10.3 SAOC conformance testing

Subclause 5.5 defines the SAOC profiles and levels. Some conformance criteria apply to SAOC in general, while others are specific to the specific SAOC profile and its levels. Conformance shall be tested for the level of the profile with which a given bitstream or decoder/transcoder claims to comply.

##### 10.4 Bitstreams

###### 10.4.1 Characteristics

The SAOC audio object type (AOT) can be used in combination with various AOTs.

###### 10.4.2 Test procedure

###### 10.4.2.1 Introduction

An SAOC bitstream shall have the syntax and semantics as specified in Clauses 1 to 9. The present subclause defines the conformance criteria that shall be fulfilled by a compliant bitstream. These criteria are specified for the syntactic elements of the bitstream and for some parameters decoded from the SAOC bitstream payload.

###### 10.4.2.2 Configuration header

**10.4.2.2.1 SAOCSpecificConfig()**

|                                 |                                                                                          |
|---------------------------------|------------------------------------------------------------------------------------------|
| <b>bsSamplingFrequencyIndex</b> | Shall be in the range 0x0..0xc or 0xf. For further restrictions, see 10.4.2.5            |
| <b>bsSamplingFrequency</b>      | For restrictions, see 10.4.2.5                                                           |
| <b>bsLowDelayMode</b>           | For restrictions, see 10.4.2.5                                                           |
| <b>bsFreqRes</b>                | Shall not be encoded with a value of 0. For further restrictions, see 10.4.2.5           |
| <b>bsFrameLength</b>            | For restrictions, see 10.4.2.5                                                           |
| <b>bsNumObjects</b>             | For restrictions, see 10.4.2.5                                                           |
| <b>bsRelatedTo[i][j]</b>        | No restrictions apply                                                                    |
| <b>bsTransmitAbsNrg</b>         | No restrictions apply                                                                    |
| <b>bsNumDmxChannels</b>         | For restrictions, see 10.4.2.5                                                           |
| <b>bsTttDualMode</b>            | No restrictions apply                                                                    |
| <b>bsTttBandsLow</b>            | Shall not be encoded with a value larger than the value of numBands as given by Table 33 |
| <b>bsPdgFlag</b>                | No restrictions apply                                                                    |
| <b>bsOneIOC</b>                 | No restrictions apply                                                                    |
| <b>bsDcuFlag</b>                | No restrictions apply                                                                    |
| <b>bsDcuMandatory</b>           | No restrictions apply                                                                    |
| <b>bsDcuDynamic</b>             | No restrictions apply                                                                    |
| <b>bsDcuMode</b>                | No restrictions apply                                                                    |
| <b>bsDcuParam</b>               | No restrictions apply                                                                    |

**10.4.2.2.2 SAOCExtensionConfigData()**

**bsSaocExtType** No restrictions apply. Note that in case of values indicated as “Reserved” in Table 43, the parsing function SAOCExtensionConfigData(bsSaocExtType) shall return the value 0, such that possibly present data is read as bsFillBits (i.e., skipped) and correct parsing of the bitstream can continue.

|                           |                       |
|---------------------------|-----------------------|
| <b>bsSaocExtLen</b>       | No restrictions apply |
| <b>bsSaocExtLenAdd</b>    | No restrictions apply |
| <b>bsSaocExtLenAddAdd</b> | No restrictions apply |
| <b>bsFillBits</b>         | No restrictions apply |

**10.4.2.2.3 SAOCExtensionConfigData(0)**

The syntactic element SAOCExtensionConfigData(0) shall not be present in case of LD profile and baseline profile level 1. Furthermore, this syntactic element shall not be present if the helper variable numSlots

has a value that is not listed in Table 55 in ISO/IEC 23003-1:2007. Furthermore, if this syntactic element is present, the bitstream shall fulfil the requirements outlined in 6.1.13 in ISO/IEC 23003-1:2007. For further restrictions, see 10.4.2.5.

|                    |                       |
|--------------------|-----------------------|
| <b>bsDcuFlag2</b>  | No restrictions apply |
| <b>bsDcuMode2</b>  | No restrictions apply |
| <b>bsDcuParam2</b> | No restrictions apply |

#### 10.4.2.2.3.1 ResidualConfig()

|                                         |                                                                                          |
|-----------------------------------------|------------------------------------------------------------------------------------------|
| <b>bsResidualSamplingFrequencyIndex</b> | Shall fulfil the requirements outlined in 6.1.13 and Table 88 in ISO/IEC 23003-1:2007    |
| <b>bsResidualFramesPerSAOCFrame</b>     | Shall fulfil the requirements outlined in 6.1.13 and Table 87 in ISO/IEC 23003-1:2007    |
| <b>bsNumGroupsFGO</b>                   | For restrictions, see 10.4.2.5                                                           |
| <b>bsResidualPresent[i]</b>             | No restrictions apply                                                                    |
| <b>bsResidualBands[i]</b>               | Shall not be encoded with a value larger than the value of <b>bsTtnBandsLow[i]</b>       |
| <b>bsTtnDualMode[i]</b>                 | No restrictions apply                                                                    |
| <b>bsTtnBandsLow[i]</b>                 | Shall not be encoded with a value larger than the value of numBands as given by Table 33 |

#### 10.4.2.2.4 SAOExtensionConfigData(1)

None

#### 10.4.2.2.5 SAOExtensionConfigData(2)

Shall fulfil the requirements outlined in Table 51.

#### 10.4.2.2.6 SAOExtensionConfigData(3)

None

#### 10.4.2.2.7 SAOExtensionConfigData(8)

##### 10.4.2.2.7.1 ObjectMetaData()

|                             |                                           |
|-----------------------------|-------------------------------------------|
| <b>bsNumByteMetaData[i]</b> | No restrictions apply                     |
| <b>bsMetaData[i][j]</b>     | Shall be encoded in UTF-8 encoding format |

#### 10.4.2.2.8 SAOExtensionConfigData(9)

#### 10.4.2.2.8.1 PresetConfig()

|                                |                                           |
|--------------------------------|-------------------------------------------|
| <b>bsNumPresets</b>            | No restrictions apply                     |
| <b>bsNumBytePresetLabel[i]</b> | No restrictions apply                     |
| <b>bsPresetLabel[i][j]</b>     | Shall be encoded in UTF-8 encoding format |
| <b>bsPresetMatrix</b>          | No restrictions apply                     |

#### 10.4.2.2.8.2 PresetMatrixData()

|                                     |                                        |
|-------------------------------------|----------------------------------------|
| <b>bsPresetMatrixType</b>           | Shall not be encoded with a value of 3 |
| <b>bsPresetMatrixElements[i][j]</b> | No restrictions apply                  |

#### 10.4.2.2.8.3 PresetMatrixData()

|                                      |                                           |
|--------------------------------------|-------------------------------------------|
| <b>bsPresetUserDataIdentifier[i]</b> | Shall be encoded in UTF-8 encoding format |
| <b>bsPresetUserDataLen</b>           | No restrictions apply                     |

#### 10.4.2.2.9 SAOCExtensionConfigData(10)

##### 10.4.2.2.9.1 SeparationMetaData()

|                                    |                       |
|------------------------------------|-----------------------|
| <b>bsNumSeparationPairs</b>        | No restrictions apply |
| <b>bsSeparationMainObjectID[i]</b> | No restrictions apply |
| <b>bsSeparationSubObjectID[i]</b>  | No restrictions apply |

#### 10.4.2.3 Bitstream payload

##### 10.4.2.3.1 SAOCFrame()

|                           |                       |
|---------------------------|-----------------------|
| <b>bsIndependencyFlag</b> | No restrictions apply |
|---------------------------|-----------------------|

##### 10.4.2.3.1.1 SAOCFramingInfo()

|                       |                                         |
|-----------------------|-----------------------------------------|
| <b>bsFramingType</b>  | No restrictions apply                   |
| <b>bsNumParamSets</b> | For restrictions, see 10.4.2.5          |
| <b>bsParamSlot[i]</b> | Shall be in the range 0...bsFrameLength |

**10.4.2.3.1.2 EcDataSaoc()**

|                                 |                                                                                                                                  |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>bsXXXdataMode[i][j]</b>      | Shall fulfil the requirements outlined in 6.1.13. Shall not be encoded with the value 2 if EAO mode (residual coding) is applied |
| <b>bsDataPairXXX[i][j]</b>      | Shall have the value 0 if setIdx == dataSets-1. No further restrictions apply                                                    |
| <b>bsQuantCoarseXXX[i][j]</b>   | No restrictions apply                                                                                                            |
| <b>bsFreqResStrideXXX[i][j]</b> | No restrictions apply                                                                                                            |

**10.4.2.3.1.3 SAOCEcDataPair()**

|                             |                       |
|-----------------------------|-----------------------|
| <b>bsPcmCodingXXX[i][j]</b> | No restrictions apply |
|-----------------------------|-----------------------|

**10.4.2.3.1.4 SAOCDiffHuffData()**

|                       |                       |
|-----------------------|-----------------------|
| <b>bsDiffType</b>     | No restrictions apply |
| <b>bsCodingScheme</b> | No restrictions apply |

**10.4.2.3.1.5 SAOCHuffData1D()**

|                          |                                                                                                                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>hcodFirstBand_XXX</b> | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of Tables A.2 and A.3, respectively, and shall have a length as defined by the corresponding entry in column 'length' |
| <b>hcod1D_XXX_YY</b>     | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of Tables A.4 and A.5, respectively, and shall have a length as defined by the corresponding entry in column 'length' |
| <b>bsSign</b>            | No restrictions apply                                                                                                                                                                                           |

**10.4.2.3.1.6 SAOCHuffData2DFreqPair()**

|                            |                                                                                                                                                                                                                                |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>hcodLavIdx</b>          | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of Table A.24, and shall have a length as defined by the corresponding entry in column 'length'                                      |
| <b>hcodFirstBand_XXX</b>   | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of Tables A.2 and A.3, respectively, and shall have a length as defined by the corresponding entry in column 'length'                |
| <b>hcod2D_XXX_YY_FP_LL</b> | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of the applicable table out of Tables A.11 to A.22, and shall have a length as defined by the corresponding entry in column 'length' |
| <b>hcod1D_XXX_YY</b>       | <b>bsCodeW</b> shall have a value out of a set of values as defined by column 'code-word' of Tables A.4 and A.5, respectively, and shall have a length as defined by the corresponding entry in column 'length'                |
| <b>bsSign</b>              | No restrictions apply                                                                                                                                                                                                          |

**10.4.2.3.2 SAOCExtensionFrame()**

No restrictions apply. Note that in case of **bsSaocExtType** having values indicated as "reserved" in Table 54, the parsing function **SAOCExtensionFrameData(bsSaocExtType)** shall return the value 0, such that possibly present data is read as **bsFillBits** (i.e., skipped) and correct parsing of the bitstream can continue.

**10.4.2.4 Transport of SAOC data****10.4.2.4.1 Transport in an MPEG environment****10.4.2.4.1.1 Introduction**

In case of transport of SAOC data in an MPEG-4 environment, the following restrictions apply. In case of **SAOCSpecificConfig()** is conveyed out-of-band, any in-band **SAOCSpecificConfig()** shall be identical to the out-of-band one.

In case of embedding of MPEG SAOC data in MPEG-2/4 AAC payloads, the following restrictions apply. There must be at least one **extension\_payload()** element with **extension\_type==EXT\_SAOC\_DATA** in each AAC frame in order to enable immediate implicit signalling.

In case of embedding of MPEG SAOC data in MPEG-1/2 Layer I/II/III bistreams, the following restrictions apply. The first bit of the ancSyncword must be byte-aligned with respect to the first bit of the 0xFFF syncword of the MPEG-1/2 frame header. The AncDataElement() must be completely included in the ancillary data of a single MPEG-1/2 frame. There must be at least one AncDataElement() in the ancillary data of each MPEG-1/2 frame in order to enable immediate implicit signalling.

#### 10.4.2.4.1.2 AncDataElement()

|                           |                                                                                                                                                                                                                                |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ancSyncword</b>        | Shall be 0x473                                                                                                                                                                                                                 |
| <b>ancType</b>            | No restrictions apply                                                                                                                                                                                                          |
| <b>ancStart</b>           | No restrictions apply                                                                                                                                                                                                          |
| <b>ancStop</b>            | No restrictions apply                                                                                                                                                                                                          |
| <b>ancLenBytes</b>        | No restrictions apply                                                                                                                                                                                                          |
| <b>ancLenBytesAdd</b>     | No restrictions apply                                                                                                                                                                                                          |
| <b>ancCrcWord</b>         | Shall have the value as determined by the procedure specified in 8.2.4                                                                                                                                                         |
| <b>ancDataSegmentByte</b> | A data block formed by concatenation of ancDataSegmentByte as specified in 8.2.4 shall, if ancType==0x0 or ancType==0x1, constitute one SaocDataFrame() syntax element, padded at the end to obtain an integer number of bytes |

#### 10.4.2.4.1.3 SaocDataFrame(saocHeaderFlag)

|                          |                                                                                                                                                                                                             |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>saocHeaderFlag</b>    | No restrictions apply                                                                                                                                                                                       |
| <b>saocHeaderLen</b>     | No restrictions apply                                                                                                                                                                                       |
| <b>saocHeaderLenAdd</b>  | No restrictions apply                                                                                                                                                                                       |
| <b>bsFillBits</b>        | No restrictions apply                                                                                                                                                                                       |
| <b>saocTimeAlignFlag</b> | No restrictions apply                                                                                                                                                                                       |
| <b>saocTimeAlign</b>     | Shall have an absolute value no larger than two times the number of samples in the MPEG SAOC PCM frame as defined by <b>bsFrameLength</b> and <b>bsSamplingFrequencyIndex</b> or <b>bsSamplingFrequency</b> |

### 10.4.2.4.2 Transport over PCM channels

#### 10.4.2.4.2.1 Introduction

In case of transport of SAOC data over PCM channels, the following restrictions apply. The BuriedData() data shall be embedded in the LSBs of the PCM channels. Typically, 16 bit PCM samples are used. However, also other sample precisions shall be supported, e.g. 20 and 24 bits.

**10.4.2.4.2.2 BuriedDataHeader()**

|                                     |                                                                                                                                                                                                       |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>bsBDSyncword</b>                 | Shall be 0xAA95                                                                                                                                                                                       |
| <b>bsBDChannels</b>                 | Shall have the value of the number of PCM channels in which the MPEG SAOC data is embedded                                                                                                            |
| <b>bsBDFramelength</b>              | Shall define a PCM buried data frame size which is exactly the same as the MPEG SAOC PCM frame size defined by <b>bsFrameLength</b> and <b>bsSamplingFrequencyIndex</b> or <b>bsSamplingFrequency</b> |
| <b>bdBDSubframes</b>                | Shall fulfil the restrictions outlined for this syntactic element in 8.3.3                                                                                                                            |
| <b>bsBDReserved</b>                 | Shall be 0                                                                                                                                                                                            |
| <b>bsBDAlloc[channel][subframe]</b> | Shall not exceed the value of n for n bit PCM samples                                                                                                                                                 |
| <b>bsBDHeaderCrc</b>                | shall fulfil the restrictions outlined for this syntactic element in 8.3.3                                                                                                                            |
| <b>bsBDHeaderPadding</b>            | Shall be 0                                                                                                                                                                                            |

**10.4.2.4.2.3 BuriedDataFrame()**

|                         |            |
|-------------------------|------------|
| <b>bsBDFramePadding</b> | Shall be 0 |
|-------------------------|------------|

**10.4.2.4.2.4 BuriedDataElement()**

|                      |                                                                                                                                                                                                                                                               |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>bsBDType</b>      | Each BuriedDataFrame() shall at least contain one BuriedDataElement() with <b>bsBDType</b> set to the value of 4 or 5. In the case of file based applications, the first frame shall contain a BuriedDataElement() with <b>bsBDType</b> set to the value of 5 |
| <b>bsBDID</b>        | Shall be set to a value in the range of 0..7, each value shall be used only once in a BuriedDataFrame()                                                                                                                                                       |
| <b>bsBDLengthIdx</b> | No restrictions apply                                                                                                                                                                                                                                         |
| <b>bsBDLength</b>    | Shall fulfil the restriction outlined for this syntactic element in 8.3.3                                                                                                                                                                                     |
| <b>bsBDBytes</b>     | Shall contain exactly one SaocDataFrame()                                                                                                                                                                                                                     |
| <b>bsBDDataCrc</b>   | Shall fulfil the restrictions outlined for this syntactic element in 8.3.3                                                                                                                                                                                    |

**10.4.2.5 Restrictions depending on profiles and levels****10.4.2.5.1 Introduction**

Depending on the profile and level associated with the present SAOC bitstream, further restrictions may apply.

#### 10.4.2.5.2 Baseline SAOC profile

For the Baseline SAOC profile, the following further restrictions apply.

|                                 |                                                                  |
|---------------------------------|------------------------------------------------------------------|
| <b>bsSamplingFrequencyIndex</b> | Shall be encoded with a value listed in <a href="#">Table 58</a> |
| <b>bsSamplingFrequency</b>      | Shall be encoded with a value listed in <a href="#">Table 58</a> |
| <b>bsFrameLength</b>            | Shall be in the range 3..71                                      |

**Table 58 — Restrictions for the SAOC Baseline Profile**

|                                 | Level 1       | Level 2       | Level 3       | Level 4       |
|---------------------------------|---------------|---------------|---------------|---------------|
| <b>bsSamplingFrequencyIndex</b> | 0x3..0xc, 0xf | 0x3..0xc, 0xf | 0x3..0xc, 0xf | 0x3..0xc, 0xf |
| <b>bsSamplingFrequency</b>      | <= 48000      | <= 48000      | <= 48000      | <= 96000      |

#### 10.4.2.5.3 Low Delay SAOC profile

For the Low Delay SAOC profile, the following further restrictions apply.

|                                 |                                                                  |
|---------------------------------|------------------------------------------------------------------|
| <b>bsSamplingFrequencyIndex</b> | Shall be encoded with a value listed in <a href="#">Table 59</a> |
| <b>bsSamplingFrequency</b>      | Shall be encoded with a value listed in <a href="#">Table 59</a> |
| <b>bsFrameLength</b>            | Shall be in the range 3..32                                      |

**Table 59 — Restrictions for the SAOC Low Delay Profile**

|                                 | Level 1       | Level 2       | Level 3       |
|---------------------------------|---------------|---------------|---------------|
| <b>bsSamplingFrequencyIndex</b> | 0x3..0xc, 0xf | 0x3..0xc, 0xf | 0x3..0xc, 0xf |
| <b>bsSamplingFrequency</b>      | <= 48000      | <= 48000      | <= 48000      |

### 10.5 SAOC decoder/transcoder

#### 10.5.1 Characteristics

##### 10.5.1.1 General

The SAOC decoder/transcoder can be implemented in two different versions:

- High Quality (HQ) SAOC
- Low Power (LP) SAOC

#### 10.5.2 Test procedure

##### 10.5.2.1 Downmix decoders

An SAOC decoder/transcoder can be used in combination with a downmix decoder. In this case, the downmix decoder shall fulfill the conformance criteria that are applicable to it.

### 10.5.2.2 SAOC decoder/transcoder test procedure

With regard to the definition and further details of the conformance criterion RMS/LSB being used to test SAOC decoders/transcoders, reference is made to ISO/IEC 14496.

The conformance test procedure for SAOC decoders/transcoders internally creates a reference for comparison, given the conformance test sequence and the output from the decoder under test as outlined in [Figure 22](#).

Figure 22 — Block diagram of the SAOC decoding/transcoding conformance test procedure

The relevant signals and data are:

- bs: SAOC bitstream from the conformance test sequence
- rend: rendering information from the conformance test sequence
- dmx: SAOC downmix signal from the conformance test sequence
- $upmix^{REF}$  /  $dmx\_bs^{REF}$ : output from the reference SAOC decoder/transcoder for comparison
- $upmix^{TEST}$  /  $dmx\_bs^{TEST}$ : output from the reference SAOC decoder/transcoder under test
- $mps\_bs^{REF}$ : MPS bitstream output from the reference SAOC transcoder
- $mps\_bs^{TEST}$ : MPS bitstream output from the SAOC transcoder under test

The relevant modules are:

- SAOC dec/trans REF: This module is the reference SAOC decoder/transcoder according to Clause 1 to 9 and Annexes A and G.
- MPS dec REF: This module is the reference MPEG Surround decoder according to ISO/IEC 23003-1.
- RMS/LSB comparison: This module calculates the difference signals between the output from the SAOC decoder/transcoder under test and the internal reference. The maximum amplitude of the difference signal (max Diff) as well as the RMS of the difference signal is calculated. The conformance criteria are specified with respect to PCM-sample in the range  $-32768 \dots 32767$ .

### 10.5.3 Test sequences

To test SAOC decoder/transcoder, ISO/IEC JTC 1/SC 29/WG 11 supplies a number of test sequences. The naming convention of these bitstreams is as follows: The first part of the name (the part preceding the first underscore) specifies the downmix format. The second part of the name (between the first and the last underscore) specifies the properties of the test sequence in question according to [Table 60](#).

Table 60 — List of SAOC bitstream elements for conformance test sequences

| Conformance test sequence    | pcm_x-1-1 | pcm_x-1-2 | pcm_x1-5 | pcm_x-1-b | pcm_x-2-1 | pcm_x-2-2 | pcm_x-2-5 | pcm_x-2-b | pcm_BLP_param_4 | pcm_BLP_param_5 | pcm_BLP_param_7 | pcm_BLP_param_10 | pcm_BLP_param_14 | pcm_BLP_param_20 | pcm_LDP_param_4 |
|------------------------------|-----------|-----------|----------|-----------|-----------|-----------|-----------|-----------|-----------------|-----------------|-----------------|------------------|------------------|------------------|-----------------|
| Downmix sampling frequency   | 48000     | 48000     | 48000    | 48000     | 48000     | 48000     | 48000     | 48000     | 48000           | 48000           | 48000           | 48000            | 48000            | 48000            | 48000           |
