| Property      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                 |
| flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                 |
| height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                 |
| left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                 |
| margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                 |

|            |                                  | <ul style="list-style-type: none"> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                            |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>         |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul> |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>           |
|            | mso-position-vertical-relative   | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul>     |
|            | mso-wrap-                        | Specifies the distance from the bottom of the shape to the text                                                                                                                                                                                                                                   |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | distance-bottom         | that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-left  | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | mso-wrap-distance-right | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-wrap-distance-top   | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited         | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style          | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position                | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                     |
|            | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li> <li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on</li> </ul>                                                                                                                                                                                                                                                                                                                                                   |

| Attributes | Description                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                 |

| target (Hyperlink Display Target) | <p>Specifies a frame or window that a URL is displayed in. Default is no value. Allowed values are:</p> <table border="1" data-bbox="415 921 1479 1560"> <thead> <tr> <th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>&lt;targetname&gt;</td><td>String containing the name of the frame or window in which to load the document.</td></tr> <tr> <td>_blank</td><td>Specifies that the linked document is loaded into a new blank window. This window is not named.</td></tr> <tr> <td>_media</td><td>Specifies that the linked document is loaded into the browser's multimedia pane.</td></tr> <tr> <td>_parent</td><td>Specifies that the linked document is loaded into the immediate parent of the document containing the link.</td></tr> <tr> <td>_search</td><td>Specifies that the linked document is loaded into the browser's search pane.</td></tr> <tr> <td>_self</td><td>Specifies that the linked document is loaded into the window in which the link was clicked (the active window).</td></tr> <tr> <td>_top</td><td>Specifies that the linked document is loaded into the topmost window.</td></tr> </tbody> </table> <p>[Example:</p> <pre> &lt;v:shape ...   href="http://www.openxmlformats.org"   target="_self" ... &gt; &lt;/v:shape&gt; </pre> <p>end example]</p> | Value | Description | <targetname> | String containing the name of the frame or window in which to load the document. | _blank | Specifies that the linked document is loaded into a new blank window. This window is not named. | _media | Specifies that the linked document is loaded into the browser's multimedia pane. | _parent | Specifies that the linked document is loaded into the immediate parent of the document containing the link. | _search | Specifies that the linked document is loaded into the browser's search pane. | _self | Specifies that the linked document is loaded into the window in which the link was clicked (the active window). | _top | Specifies that the linked document is loaded into the topmost window. |
| Value                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| <targetname>                      | String containing the name of the frame or window in which to load the document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _blank                            | Specifies that the linked document is loaded into a new blank window. This window is not named.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _media                            | Specifies that the linked document is loaded into the browser's multimedia pane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _parent                           | Specifies that the linked document is loaded into the immediate parent of the document containing the link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _search                           | Specifies that the linked document is loaded into the browser's search pane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _self                             | Specifies that the linked document is loaded into the window in which the link was clicked (the active window).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _top                              | Specifies that the linked document is loaded into the topmost window.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |

| Attributes                                                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                         | <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                       |
| <p>title (Shape Title)</p>                                                                              | <p>Specifies the text displayed when the mouse pointer moves over the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... title="tooltip" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                       |
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                 |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p>                                                                                                                                                         |

| Attributes | Description                                                                                                                                                                                                                                                      |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>[Example:</p> <pre data-bbox="456 323 1159 422">&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_Shapetype) is located in §A.6.1. end note]

#### 19.1.2.21 stroke (Line Stroke Settings)

This element describes how to draw the path if something beyond solid line with a solid color is desired. The attributes of the stroke element can be used to describe a powerful set of stroke properties. Extensions to the VML stroke definition are encoded as sub-elements of stroke.

[Example:

```
<v:polyline points="0pt,0pt,50pt,0pt,50pt,35pt,15pt,35pt,
  15pt,15pt,75pt,15pt">
  <v:stroke startarrow="classic" endarrow="classic"
    startarrowwidth="wide" endarrowwidth="wide" dashstyle="dashdot"
    weight="2pt" color="teal" linestyle="thinThin"/>
</v:polyline>
```

end example]

| <b>alhref</b> (Alternate Image Reference)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies an alternate reference for an image in Macintosh PICT format.</p> <p>[Example:</p> <pre>&lt;v:stroke ... alhref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>color</b> (Stroke Color)                                                                            | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[Example: The shape stroke is blue:</p> <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                         |
| <b>color2</b> (Stroke Alternate Pattern Color)                                                         | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[Example: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt;</pre> |

| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p><i>[Example:</i></p> <pre> &lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt; </pre> |

This attribute overrides the shape's strokeweight attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                               |

[Note: The W3C XML Schema definition of this element's content model (CT\_Stroke) is located in §A.6.1. *end note*]

#### 19.1.2.22 textbox (Text Box)

This element is used to define text that appears inside the shape. This text can contain rich formatting and is rendered to fit inside the textboxrect defined by the path element (§19.1.2.14).

[Example:

```
<v:shape style="width=200;height=200" coordsize="400,400"
  fillcolor="yellow" strokecolor="maroon"
  path="m 119,0 l 148,86 238,86 166,140 192,226 119,175 46,226
  72,140 0,86 90,86 x e">
```

```
<v:textbox inset="32pt,35pt,, ">VML</v:textbox>
</v:shape>
```

*end example]*

| flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm,</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|            | mso-position-vertical-relative   | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul>     |
|            | mso-wrap-distance-bottom         | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>               |
|            | mso-wrap-                        | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different</p>                                                                                                                                                       |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | distance-left           | from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-distance-right | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-wrap-distance-top   | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited         | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style          | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position                | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation                | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                     | Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Attributes                                                                  | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                             |             | <p>shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                    |
|                                                                             | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                               |
|                                                                             | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|                                                                             | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li> <li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on top of those with lower numbers. Negative numbers are allowed.</li> </ul>                                                                                                                                                |
| The following properties are only used by the textbox element (§19.1.2.22): |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p><b>direction</b></p> <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p> <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                           |
|            | <p><b>layout-flow</b></p> <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | <p><b>mso-direction-alt</b></p> <p>Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.</p>                                                                                                                                                                                                                                                                               |
|            | <p><b>mso-fit-shape-to-text</b></p> <p>Specifies whether the shape stretches to fit the text in the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                |
|            | <p><b>mso-fit-text-to-shape</b></p> <p>Specifies whether the text stretches to fit the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                             |
|            | <p><b>mso-layout-flow-alt</b></p> <p>Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.</p>                                                                                                                                                                                       |
|            | <p><b>mso-next-textbox</b></p> <p>Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.</p>                                                                                                                                                                                                                                                                                     |
|            | <p><b>mso-rotate</b></p> <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                    |
|            | <p><b>mso-text-scale</b></p> <p>Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.</p>                                                                                                                                                                                                                                                                           |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Description                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                    |              |                                                                                                                                                                                                                                       |

[Note: The W3C XML Schema definition of this element's content model (CT\_Textbox) is located in §A.6.1. *end note*]

### 19.1.2.23 **textpath** (Text Layout Path)

This element is used to define a vector path based on the text data, font and font styles supplied. The path which results is then mapped into the region defined by the *v* attribute of the shape's path (§19.1.2.14).

[Example:

```
<v:curve from="50,100" to="400,100"
  control1="200,200" control2="300,200">
  <v:stroke color="blue"/>
  <v:fill color="yellow" color2="green" type="gradient"/>
  <v:path textpathok="true"/>
  <v:textpath on="true" style="font:normal normal normal 36pt Arial"
    fitpath="true" string="Hello, VML!"/>
</v:curve>
```

*end example]*

| fitshape (Shape Fit Toggle)                                                       | <p>Specifies whether the text fits the bounding box of a shape. If true, the text is stretched out to the edges of the box that defines the entire shape. Default is false.</p> <p>[Example: When fitshape is false, the text is drawn along the first part of the path. When true, the text is stretched to fit the entire enclosed area of the shape.</p> <pre>&lt;v:shape style="width:100;height:100"   path="m 0,500 c 250,0 750,0 1000,500 e   m 0,600 c 250,900 750,900 1000,600 e"   fillcolor="yellow" strokecolor="maroon"&gt;   &lt;v:path textpathok="t"/&gt;   &lt;v:textpath on="t" fitshape="t" string="VML"/&gt; &lt;/v:shape&gt;</pre>  <p>The raw path stroke is:</p>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |                                                                                   |                |                                                                                   |                 |

| Attributes                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>id</b> (Unique Identifier)           | <p>Specifies a unique identifier that can be used to reference a VML object.</p> <p>Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... id="myShape" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                  |
| <b>on</b> (Text Path Toggle)            | <p>Specifies whether the text is displayed on the textpath. Default is false. The textpathok attribute of the path element (§19.1.2.14) overrides this.</p> <p>[Example:</p> <pre>&lt;v:line from="50,100" to="100,100"&gt;   &lt;v:path textpathok="false"/&gt;   &lt;v:textpath on="true" string="VML"/&gt; &lt;/v:line&gt;</pre> <hr/> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                  |
| <b>string</b> (Text Path Text)          | <p>Specifies the text of the text path. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>style</b> (Shape Styling Properties) | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt;</pre> |

| Attributes    | Description | flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                         | shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| mso-wrap-distance-right | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| mso-wrap-distance-top   | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| mso-wrap-edited         | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| mso-wrap-style          | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| position                | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
| rotation                | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| top                     | Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:                                                                                                                                                                                                                                                                                                                                                                                                         |

| Attributes                                                                                                                                       | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p><b>direction</b></p> <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p> <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                           |
|            | <p><b>layout-flow</b></p> <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | <p><b>mso-direction-alt</b></p> <p>Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.</p>                                                                                                                                                                                                                                                                               |
|            | <p><b>mso-fit-shape-to-text</b></p> <p>Specifies whether the shape stretches to fit the text in the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                |
|            | <p><b>mso-fit-text-to-shape</b></p> <p>Specifies whether the text stretches to fit the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                             |
|            | <p><b>mso-layout-flow-alt</b></p> <p>Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.</p>                                                                                                                                                                                       |
|            | <p><b>mso-next-textbox</b></p> <p>Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.</p>                                                                                                                                                                                                                                                                                     |
|            | <p><b>mso-rotate</b></p> <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                    |
|            | <p><b>mso-text-scale</b></p> <p>Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.</p>                                                                                                                                                                                                                                                                           |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Description                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                    |              |                                                                                                                                                                                                                                       |

Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"><li>• top</li><li>• middle</li><li>• bottom</li><li>• top-center</li><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul> |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                    |              |                                                                                                                                                                                                                                       |

|                              | <ul style="list-style-type: none"> <li>• position</li> <li>• rotation</li> <li>• top</li> <li>• visibility</li> <li>• width</li> <li>• z-index</li> </ul> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| trim (Text Path Trim Toggle) | <p>Specifies whether extra space is removed above and below the text. If true, space reserved for ascenders and descenders is removed. Default is false.</p> <p>[Example: The shape path is duplicated as a second shape and overlaid on the textpath for illustrative purposes:</p> <pre> &lt;v:shape style=" width:100;height:100"   path="m 0,500 c 250,0 750,0 1000,500 e   m 0,600 c 250,900 750,900 1000,600 e"   fillcolor="yellow" strokecolor="maroon"&gt;   &lt;v:path textpathok="true"/&gt;   &lt;v:textpath on="true" fitshape="true"     string="vml" trim="true"/&gt; &lt;/v:shape&gt; </pre> <div style="display: flex; align-items: center; justify-content: center;">  <div style="margin-left: 10px;">trim="true"</div> </div> <div style="display: flex; align-items: center; justify-content: center; margin-top: 10px;">  <div style="margin-left: 10px;">trim="false"</div> </div> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| xscale (Text X-Scaling)      | <p>Specifies whether a straight text path is used instead of the shape path. If true, the text runs along a path from left to right along the x value of the lower boundary of the shape. Default is false.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_TextPath](#)) is located in §A.6.1. *end note*]

### 19.1.3 Simple Types

The following additional simple type information in the urn:schemas-microsoft-com:vml namespace is used for documents of a transitional conformance class.

#### 19.1.3.1 ST\_EditAs (Shape Grouping Types)

This simple type specifies the different meanings of a group of shapes.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                     | Description                                                                   |
|---------------------------------------|-------------------------------------------------------------------------------|
| bullseye (Bullseye Diagram)           | Specifies that the group represents a bulls-eye diagram.                      |
| canvas (Shape Canvas)                 | Specifies that the group is a regular group and does not represent a diagram. |
| cycle (Cycle Diagram)                 | Specifies that the group represents a cycle diagram.                          |
| orgchart (Organization Chart Diagram) | Specifies that the group represents an organization chart.                    |
| radial (Radial Diagram)               | Specifies that the group represents a radial diagram.                         |
| stacked (Pyramid Diagram)             | Specifies that the group represents a pyramid diagram.                        |
| venn (Venn Diagram)                   | Specifies that the group represents a Venn diagram.                           |

| Referenced By            |
|--------------------------|
| group@editas (§19.1.2.7) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_EditAs](#)) is located in §A.6.1. *end note*]

#### 19.1.3.2 ST\_Ext (VML Extension Handling Behaviors)

This simple type specifies VML extension handling behaviors.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value               | Description                                                                                                                                  |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| backwardCompatible (Renderable) | Specifies that the VML entity may be rendered by ignoring the extension information. If edited, the extension information must be discarded. |
| edit (Editable)                 | Specifies that the VML entity may be safely rendered                                                                                         |

| Enumeration Value     | Description                                                                                                                                                                                                     |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | and edited without invalidating the extension information.                                                                                                                                                      |
| view (Not renderable) | Specifies that the VML entity is not be renderable without understanding the extension information. If the extension information cannot be understood, the downlevel image should be used to render the object. |

| Referenced By                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@ext (§19.2.2.1); callout@ext (§19.2.2.2); colormenu@ext (§19.2.2.4); colormru@ext (§19.2.2.5); column@ext (§19.2.2.6); complex@ext (§19.2.2.7); diagram@ext (§19.2.2.8); extrusion@ext (§19.2.2.11); fill@ext (§19.2.2.13); idmap@ext (§19.2.2.14); left@ext (§19.2.2.16); lock@ext (§19.2.2.18); regrouptable@ext (§19.2.2.23); rel@ext (§19.2.2.24); relationtable@ext (§19.2.2.25); right@ext (§19.2.2.26); rules@ext (§19.2.2.27); shapedefaults@ext (§19.2.2.28); shapelayout@ext (§19.2.2.29); signatureline@ext (§19.2.2.30); skew@ext (§19.2.2.31); top@ext (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_Ext) is located in §A.6.1. *end note*]

### 19.1.3.3 ST\_FillMethod (Gradient Fill Computation Type)

This simple type specifies ways in which a gradient fill is computed.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                | Description                                                                                               |
|----------------------------------|-----------------------------------------------------------------------------------------------------------|
| any (Application Default Fill)   | Default blend<br>      |
| linear (Linear Fill)             | Linear blend<br>       |
| linear sigma (Linear Sigma Fill) | Linear sigma blend<br> |
| none (No Gradient Fill)          | No blend<br>           |
| sigma (Sigma Fill)               | Sigma blend<br>        |

| Enumeration Value | Description                                                                       |
|-------------------|-----------------------------------------------------------------------------------|
|                   |  |

| Referenced By           |
|-------------------------|
| fill@method (§19.1.2.5) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_FillMethod) is located in §A.6.1.  
end note]

#### 19.1.3.4 ST\_FillType (Shape Fill Type)

This simple type specifies the types for fills applied to a shape.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                | Description                                                                                                                                                    |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| frame (Stretch Image to Fit)     | The image is stretched to fill the shape.<br>                                |
| gradient (Linear Gradient)       | The fill colors blend together in a linear gradient from bottom to top.<br> |
| gradientRadial (Radial Gradient) | The fill colors blend together in a radial gradient.<br>                    |
| pattern (Image Pattern)          | The image is used to create a pattern using the fill colors.<br>            |
| solid (Solid Fill)               | The fill pattern is a solid color.<br>                                      |
| tile (Tiled Image)               | The fill image is tiled.<br>                                                |

| Referenced By                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@filltype (§19.2.2.1); column@filltype (§19.2.2.6); fill@type (§19.1.2.5); left@filltype (§19.2.2.16); right@filltype (§19.2.2.26); stroke@filltype (§19.1.2.21); top@filltype (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_FillType) is located in §A.6.1. end note]

#### 19.1.3.5 ST\_ImageAspect (Image Scaling Behavior)

This simple type specifies the scaling behaviors for an image applied to a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value            | Description                                                                                                                 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| atLeast (At Least)           | Image is at least as big as imagesize.<br> |
| atMost (At Most)             | Image is no bigger than imagesize.<br>   |
| ignore (Ignore Aspect Ratio) | Ignore aspect issues.<br>                |

| Referenced By                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@imageaspect (§19.2.2.1); column@imageaspect (§19.2.2.6); fill@aspect (§19.1.2.5); left@imageaspect (§19.2.2.16); right@imageaspect (§19.2.2.26); stroke@imageaspect (§19.1.2.21); top@imageaspect (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_ImageAspect) is located in §A.6.1. end note]

#### 19.1.3.6 ST\_ShadowType (Shadow Type)

This simple type specifies the types of shadows applied to a shape.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                | Description                                                                          |
|----------------------------------|--------------------------------------------------------------------------------------|
| double (Double Shadow)           | Double shadow. color2 and offset2 are used for the second shadow's color and offset. |
| emboss (Embossed Shadow)         | The shadow has an embossed look. Similar to double.                                  |
| perspective (Perspective Shadow) | Perspective shadow.                                                                  |
| single (Single Shadow)           | Single shadow.                                                                       |

| Referenced By            |
|--------------------------|
| shadow@type (§19.1.2.18) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_ShadowType) is located in §A.6.1. *end note*]

### 19.1.3.7 ST\_StrokeArrowLength (Stroke Arrowhead Length)

This simple type specifies the lengths of a stroke arrowhead.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description        |
|---------------------------|--------------------|
| long (Long Arrowhead)     | Long length<br>→   |
| medium (Medium Arrowhead) | Medium length<br>→ |
| short (Short Arrowhead)   | Short length<br>→  |

| Referenced By                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

[Note: The W3C XML Schema definition of this simple type's content model (ST\_StrokeArrowLength) is located in §A.6.1. *end note*]

### 19.1.3.8 ST\_StrokeArrowType (Stroke Arrowhead Type)

This simple type specifies the types of arrowhead for a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value           | Description                                                                                                   |
|-----------------------------|---------------------------------------------------------------------------------------------------------------|
| block (Block Arrowhead)     | Block arrowhead<br>          |
| classic (Classic Arrowhead) | Classic curved arrowhead<br> |
| diamond (Diamond Arrowhead) | Diamond arrowhead<br>        |
| none (No Arrowhead)         | No arrowhead<br>             |
| open (Open Arrowhead)       | Open arrowhead<br>           |
| oval (Oval Arrowhead)       | Round arrowhead<br>          |

| Referenced By                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@endarrow (§19.2.2.1); bottom@startarrow (§19.2.2.1); column@endarrow (§19.2.2.6); column@startarrow (§19.2.2.6); left@endarrow (§19.2.2.16); left@startarrow (§19.2.2.16); right@endarrow (§19.2.2.26); right@startarrow (§19.2.2.26); stroke@endarrow (§19.1.2.21); stroke@startarrow (§19.1.2.21); top@endarrow (§19.2.2.32); top@startarrow (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeArrowType](#)) is located in §A.6.1. end note]

### 19.1.3.9 ST\_StrokeArrowWidth (Stroke Arrowhead Width)

This simple type specifies the widths of a stroke arrowhead.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------------------|
| medium (Medium Arrowhead) | Medium width<br> |
| narrow (Narrow Arrowhead) | Narrow width<br> |
| wide (Wide Arrowhead)     | Wide width<br>   |

| Referenced By                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@endarrowwidth (§19.2.2.1); bottom@startarrowwidth (§19.2.2.1); column@endarrowwidth (§19.2.2.6); column@startarrowwidth (§19.2.2.6); left@endarrowwidth (§19.2.2.16); left@startarrowwidth (§19.2.2.16); right@endarrowwidth (§19.2.2.26); right@startarrowwidth (§19.2.2.26); stroke@endarrowwidth (§19.1.2.21); stroke@startarrowwidth (§19.1.2.21); top@endarrowwidth (§19.2.2.32); top@startarrowwidth (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_StrokeArrowWidth) is located in §A.6.1. *end note*]

#### 19.1.3.10 ST\_StrokeEndCap (Stroke End Cap Type)

This simple type specifies the styles for the end of a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value   | Description                                                                                       |
|---------------------|---------------------------------------------------------------------------------------------------|
| flat (Flat End)     | Flat end<br>    |
| round (Round End)   | Round end<br>  |
| square (Square End) | Square end<br> |

| Referenced By                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@endcap (§19.2.2.1); column@endcap (§19.2.2.6); left@endcap (§19.2.2.16); right@endcap (§19.2.2.26); stroke@endcap (§19.1.2.21); top@endcap (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_StrokeEndCap) is located in §A.6.1. *end note*]

#### 19.1.3.11 ST\_StrokeJoinStyle (Line Join Type)

This simple type specifies the join styles for a polyline (§19.1.2.15).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value   | Description                                                                                       |
|---------------------|---------------------------------------------------------------------------------------------------|
| bevel (Bevel Joint) | Bevel joint<br> |
| miter (Miter Joint) | Miter joint<br> |
| round (Round Joint) | Round joint<br> |

| Referenced By                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@joinstyle (§19.2.2.1); column@joinstyle (§19.2.2.6); left@joinstyle (§19.2.2.16); right@joinstyle (§19.2.2.26); stroke@joinstyle (§19.1.2.21); top@joinstyle (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeJoinStyle](#)) is located in §A.6.1. *end note*]

#### 19.1.3.12 ST\_StrokeLineStyle (Stroke Line Style)

This simple type specifies the line styles for a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                                | Description                                                                                                          |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| single (Single Line)                             | Single line<br>                   |
| thickBetweenThin (Thick Line Between Thin Lines) | Thick line between thin lines<br> |
| thickThin (Thick Line Outside Thin Line)         | Thick line outside thin line<br>  |
| thinThick (Thin Line Outside Thick Line)         | Thin line outside thick line<br>  |

| Enumeration Value         | Description                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------------------|
|                           |                    |
| thinThin (Two Thin Lines) | Two thin lines<br> |

| Referenced By                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bottom@linestyle (§19.2.2.1); column@linestyle (§19.2.2.6); left@linestyle (§19.2.2.16); right@linestyle (§19.2.2.26); stroke@linestyle (§19.1.2.21); top@linestyle (§19.2.2.32) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_StrokeLineStyle) is located in §A.6.1. *end note*]

## 19.2 VML - Office Drawing

It is possible to include graphical VML objects in Office Open XML documents. The elements describing the core graphical objects are defined in the VML namespace. Additional elements that describe certain advanced shape effects, metadata and relationships are defined in this namespace.

[Note: The VML format is a legacy format originally introduced with Office 2000 and is included and fully defined in ISO/IEC 29500 for backwards compatibility reasons. The DrawingML format is a newer and richer format created with the goal of eventually replacing any uses of VML in the Office Open XML formats. VML should be considered a transitional format included in Office Open XML for legacy reasons only and new applications that need a file format for drawings are strongly encouraged to use preferentially DrawingML. *end note*]

[Example: Assume the following shape exists in a document:

The basic speech bubble shape is defined using VML. The 3-D effect is defined using the extrusion element in this namespace. The specularity attribute defines the subtle sharp reflection on the edge of the shape. The color attribute sets the extrusion to a different color than the face of the shape. The rotationangle attribute sets the shape's rotation about the X- and Y-axes. The lightposition and lightposition2 attributes set the positions of the light sources that illuminate the shape.

```
<o:extrusion v:ext="view" specularity="80000f" color="#c4bc96 [2414]" on="t"
```

```
rotationangle="-5,15" lightposition="0,-50000" lightposition2="0,50000"
type="perspective"/>
```

This element is a child of the primary shape definition:

```
<v:shape id="_x0000_s1030" type="#_x0000_t62"
  style="position:absolute;left:0;text-align:left;margin-left:35.25pt;
  margin-top:60pt;width:69pt;height:57pt;z-index:251658240" adj="1675,27171"
  fillcolor="#ddd8c2 [2894]">
  <o:extrusion ... />
</v:shape>
```

*end example]*

Throughout VML, numeric values that are allowed to take units can be specified in: cm (centimeters), mm (millimeters), in (inches), pt (points), pc (picas), px (pixels).

### 19.2.1 Table of Contents

This subclause is informative.

|               |                                                          |            |

End of informative text.

## 19.2.2 Elements

The following elements comprise the contents of the urn:schemas-microsoft-com:office:office namespace:

[Note: As the VML format is a format provided for backward compatibility, those VML elements defined in the same urn:schemas-microsoft-com:office:office namespace remain in that namespace as it is already used by millions of documents already using VML. *end note*]

### 19.2.2.1 bottom (Text Box Bottom Stroke)

This element specifies the stroke properties for the bottom border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown.

[Example: The text box borders are set independently. Note that the bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

end example]

|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>color2 (Stroke Alternate Pattern Color)</p> | <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[Example: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre> &lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt; </pre>  <p>, where myimage.gif is: </p> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>dashstyle (Stroke Dash Pattern)</p>         | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                      | <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>endarrow (Line End Arrowhead)</p> | <p>Specifies an arrowhead for the end of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke endarrow="classic"/&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   |  <p>imagealignshape="atleast"</p> <p>imagealignshape="atmost"</p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ImageAspect simple type (§19.1.3.5).</p>                                                                                                                                               |
| imagesize (Stroke Image Size)     | <p>Specifies the size of the image for the stroke. Default is the size of the image.</p> <p>[Example:</p> <pre>&lt;v:stroke ... imagesize="10pt,10pt" .../&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                     |
| insetpen (Inset Border From Path) | <p>Specifies that the border shall be displayed inside of the path defining the shape, rather than along the path (the default border placement), or outside of the path as might be done with an image.</p> <p>[Example:</p> <pre>&lt;v:shape ... insetpen="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| joinstyle (Line End Join Style)   | <p>Specifies the join style for line ends. Default is round.</p> <ul style="list-style-type: none"> <li>• round</li> <li>• bevel</li> <li>• miter</li> </ul> <p>[Example:</p> <pre>&lt;v:polyline strokeweight="10pt" strokecolor="navy" points="10pt,10pt,50pt,50pt,90pt,10pt"&gt;</pre>                                                                                                                                            |

| Attributes                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                | <pre>&lt;v:stroke joinstyle="bevel"/&gt; &lt;/v:polyline&gt;</pre>  <p>joinstyle="round"</p> <p>joinstyle="bevel"</p> <p>joinstyle="miter"</p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeJoinStyle simple type (§19.1.3.11).</p>                                                                                                                                                                              |
| linestyle (Stroke Line Style)  | <p>Specifies the line style of the stroke. Default is single.</p> <ul style="list-style-type: none"> <li>• single</li> <li>• thinThin</li> <li>• thinThick</li> <li>• thickThin</li> <li>• thickBetweenThin</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke linestyle="thickThin" weight="5pt"&gt; &lt;/v:stroke&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeLineStyle simple type (§19.1.3.12).</p> |
| miterlimit (Miter Joint Limit) | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p> <p>[Example:</p>                                                                                                                                                                                                                                                                                                                                |

| Attributes               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <pre>&lt;v:stroke joinstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p>                                                                                                                                                                                                                         |
| on (Stroke Toggle)       | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| opacity (Stroke Opacity) | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string</p>                                                                              |

| Attributes                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| src (Stroke Image Location)                    | <p>datatype.</p> <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                              |
| startarrow (Line Start Arrowhead)              | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p> |
| startarrowlength (Line Start Arrowhead Length) | <p>Specifies the length of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowlength="long" ... /&gt;</pre>                                                                                                                                                                                                                                                                                                                         |

| Attributes                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                           |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p>                                                                                                                                                                                                                                                                                              |
| <b>startarrowwidth</b><br>(Line Start<br>Arrowhead Width) | <p>Specifies the width of the arrowhead at the start of a line. Default is <i>medium</i>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• narrow</li> <li>• medium</li> <li>• wide</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p> |
| <b>title</b> (Stroke Title)                               | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <pre>&lt;v:fill ... o:title="alt text" ... &gt; &lt;/v:fill&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                             |
| <b>weight</b> (Stroke<br>Weight)                          | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's <i>strokeweight</i> attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                           |

[Note: The W3C XML Schema definition of this element’s content model (CT\_StrokeChild) is located in §A.6.2.  
end note]

### 19.2.2.2 callout (Callout)

This element specifies the automatic behavior and layout parameters of callout shapes. Callout shapes are standard VML shapes that behave as callouts, providing an additional callout object which can be used to point at another location:

[Example: Consider the following VML shape:

If this shape is made a callout shape by adding the callout element to its shape definition, then the shape has a callout object, for example:

end example]

| Parent Elements                                                                                                                                                                                                                                                                                                                                                                                                 |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|

[Note: The W3C XML Schema definition of this element's content model (CT\_Callout) is located in §A.6.2. *end note*]

### 19.2.2.3 clippath (Shape Clipping Path)

This element specifies the path of the clipping polygon for the shape.

[Example:

```
<v:rect ... wrapcoords="-207 -433 -207 21925 21807 21925 21807 -433 -207 -433"
o:clip="t" o:cliptowrap="t">
  <o:clippath o:v="m-207,-433r,22358121807,21925r,-223581-207,-433xe"/>
</v:rect>
```

*end example*]

Specifying a number of coordinate pairs forms a polyline. | c | curveto | 6* | Draw a cubic bézier curve from the current point to the coordinate given by the final two parameters. The control points are given by the first four parameters. | x | close | 0 | Close the current sub-path by drawing a straight line from the current point to the original moveto point. | e | end | 0 | End the current set of sub-paths. A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. | t | rmoveto | 2* | Start a new sub-path at a coordinate relative to the current point, cp (cpx+x, cpy+y). | r | rlineto | 2* | Draw a line from the current point to the given relative coordinate (cpx+x, |

A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. |            |             |   |        |   |                                                     |   |        |    |                                                                                                                                                                 |   |         |    |                                                                                                                                                                  |   |       |   |                                                                                                            |   |     |   |                                                                                                                                                                                      |   |         |    |                                                                                        |   |         |    |                                                                             |

|            | v           | rcurveto       | 6* | Cubic bézier curve using the given coordinate relative to the current point.                                                                                                                                                                                                                                                                                                                                                                                |
|            | nf          | nofill         | 0  | The current set of sub-paths (delimited by e) is not filled.                                                                                                                                                                                                                                                                                                                                                                                                |
|            | ns          | nostroke       | 0  | The current set of sub-paths (delimited by e) is not stroked.                                                                                                                                                                                                                                                                                                                                                                                               |
|            | ae          | angleellipseto | 6* | Draws a segment of an ellipse as described using these parameters. A straight line is drawn from the current point to the start point of the segment. The parameters are: center (x,y), size(w,h), start angle, end angle.                                                                                                                                                                                                                                  |
|            | al          | angleellipse   | 6* | Same as angleellipseto except that there is an implied moveto the starting point of the segment.                                                                                                                                                                                                                                                                                                                                                            |
|            | at          | arcto          | 8* | A segment of the ellipse is drawn which starts at the angle defined by the start radius vector and ends at the angle defined by the end vector. A straight line is drawn from the current point to the start of the arc. The arc is always drawn in a counterclockwise direction. The parameters are: left, top, right, bottom, start(x,y), end(x,y). The first four values define the bounding box of an ellipse. The last four define two radial vectors. |
|            | ar          | arc            | 8* | Same as arcto except there is an implied moveto the start point of the arc.                                                                                                                                                                                                                                                                                                                                                                                 |
|            | wa          | clockwisearco  | 8* | Same as arcto but the arc is drawn in a clockwise direction.                                                                                                                                                                                                                                                                                                                                                                                                |
|            | wr          | clockwisearc   | 8* | Same as arc but the arc is drawn in a clockwise direction                                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes                                                                                | Description |                     |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------------------------------------------------------|-------------|---------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                           | qx          | ellipticalquadrantx | 2*   | A quarter ellipse is drawn from the current point to the given end point. The elliptical segment is initially tangential to a line parallel to the x-axis. (i.e. the segment starts out horizontal). The parameters are: end(x,y).                                                                                                                                                                                                                   |
|                                                                                           | qy          | ellipticalquadranty | 2*   | Same as ellipticalquadrantx except that the elliptical segment is initially tangential to a line parallel to the y-axis (i.e. the segment starts out vertical).                                                                                                                                                                                                                                                                                      |
|                                                                                           | qb          | quadraticbezier     | 2+2* | Defines one or more quadratic bézier curves by means of control points and an end point. Intermediate (on-curve) points are obtained by interpolation between successive control points as in the OpenType font specification. The sub-path need not be started in which case the sub-path is closed. In this case the last point of the sub-path defines the start point of the quadratic bézier. The parameters are: controlpoint(x,y)*, end(x,y). |
| The possible values for this attribute are defined by the W3C XML Schema string datatype. |             |                     |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_ClipPath](#)) is located in §A.6.2. *end note*]

#### 19.2.2.4 [colormenu](#) (UI Default Colors)

This element determines the default colors for different types of colors that can be applied to VML shapes.

[*Rationale:* An application can choose to retain default colors or the last color choices a user made and present those in parts of its user interface. *end rationale*]

[Example:

```
<o:shapedefaults ... >
  <o:colormenu v:ext="edit" fillcolor="none" extrusioncolor="#36f"/>
</o:shapedefaults>
```

*end example]*

| Parent Elements            |

Default is "#0000FF".<br><br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).                                                                                                                                                                                                                                                                                           |
| shadowcolor (Default shadow color)                                                       | The default color associated with the shadow of a VML shape. Default is "#80800C".<br><br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).                                                                                                                                                                                                                                                                                         |
| strokecolor (Default stroke color)                                                       | The default color associated with the stroke of a VML shape. Default is "#FFFF00".<br><br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).                                                                                                                                                                                                                                                                                         |

*[Note: The W3C XML Schema definition of this element's content model (CT\_ColorMenu) is located in §A.6.2. end note]*

#### 19.2.2.5 colormru (Most Recently Used Colors)

This element defines a list of up to eight colors which represent the colors most recently used by the user.

*[Rationale: An application can choose to retain the last color choices a user made, regardless of where on VML shapes they are used, and present those in parts of its user interface. end rationale]*

*[Example:*

```
<o:shapedefaults ... >
```

```
<o:colormru v:ext="edit" colors="#a01aae,#456b69,#06f,#a1ae24,#d57811"/>
</o:shapedefaults>
```

*end example]*

| Parent Elements            |

|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| colors (Recent colors)                                                                   | <p>A comma-separated list of up to eight most recently used colors. Default is no value. Colors should be defined using hexadecimal notation - see the ST_ColorType simple type (§20.1.2.3) for a full description.</p> <p>[Example:</p> <pre>&lt;o:colormru v:ext="edit"   colors="#a01aae,#456b69,#06f,#a1ae24,#d57811"/&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                |
| ext (VML Extension Handling Behavior)<br><br>Namespace:<br>urn:schemas-microsoft-com:vml | <p>Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.</p> <p>[<i>Rationale:</i> This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale]</i></p> <p>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2).</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_ColorMru) is located in §A.6.2. *end note]*

#### 19.2.2.6 column (Text Box Interior Stroke)

This element specifies the stroke properties for the interior border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown. [Note: This element is ignored if an implementation does not support multi-column text boxes. *end note]*

[Example: The text box borders are set independently. Note that the bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

*end example]*

|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| alhref (Alternate Image Reference) | <p>Specifies an alternate reference for an image in Macintosh PICT format.</p> <p>[Example:</p> <pre>&lt;v:stroke ... alhref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                     |
| color (Stroke Color)               | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[Example: The shape stroke is blue:</p> <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |

| Attributes                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>color2 (Stroke Alternate Pattern Color)</b> | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[<i>Example:</i> This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre>  <p>, where myimage.gif is: </p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <b>dashstyle (Stroke Dash Pattern)</b>         | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Attributes                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <p>the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| endarrow (Line End Arrowhead) | <p>Specifies an arrowhead for the end of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke endarrow="classic"/&gt;</pre>  <p>]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Attributes                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

19.2.2.8 diagram (VML Diagram)

This element specifies semantic information for a limited set of structured diagrams that have VML representations. Diagrams should be defined using DrawingML; this representation is included for compatibility with applications that rely on VML. The following diagram types have VML representations:

| Diagram Type       | Example (non-normative)                                                             |
|--------------------|-------------------------------------------------------------------------------------|
| Organization chart |  |
| Radial             |  |
| Cycle              |  |

| Diagram Type | Example (non-normative)                                                           |
|--------------|-----------------------------------------------------------------------------------|
| Pyramid      |  |
| Venn         |  |
| Bulls-eye    |  |

Each of these types of diagrams contains shapes that are positioned relative to one another. Each shape also has optional associated text.

| Parent Elements                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| background (Part 1, §17.2.1); group (§19.1.2.7); hdrShapeDefaults (§14.7.2.1); object (Part 1, §17.3.3.19); pict (§14.2.2.2); pict (§14.5.1); shapeDefaults (§14.7.2.2) |

| Child Elements                             | Subclause  |
|--------------------------------------------|------------|
| relationtable (Diagram Relationship Table) | §19.2.2.25 |

| Attributes                               | Description                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| autoformat<br>(Diagram Automatic Format) | <p>Specifies whether the diagram is formatted automatically by the application and user overrides are locked. Default is false.</p> <p>[Example:</p> <pre>&lt;o:diagram ... autoformat="true"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| autolayout<br>(Diagram Automatic Layout) | <p>Specifies whether the diagram elements are laid out automatically by the application and user overrides are locked. Default is true.</p>                                                                                                                                                                                                           |

| Attributes                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <p>[Example:</p> <pre>&lt;o:diagram ... autolayout="false"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                     |
| <p>constrainbounds<br/>(Diagram Layout Extents)</p>  | <p>Specifies an optional, application-specific parameter related to the diagram's extents intended to be used by the application to assist laying out the diagram.</p> <p>[Example:</p> <pre>&lt;o:diagram ... constrainbounds="2910,2696,9773,9558"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                 |
| <p>dgmbasetextscale<br/>(Diagram Base Font Size)</p> | <p>Specifies the diagram's original font size. This is used in subsequent font size recalculations. If the most recent diagram font size is used to calculate the font size after a rescale, the font size would be wrong after non-isometric diagram rescalings.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmbasetextscale="12"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |

| reverse (Diagram Reverse Direction) | <p>Specifies whether the order of the diagram nodes is reversed. This is only relevant to diagrams that have linear ordering.</p> <p>[Example:</p> <pre>&lt;o:diagram ... reverse="true"&gt; &lt;/o:diagram&gt;</pre>  <p>end example</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Diagram](#)) is located in §A.6.2. end note]

19.2.2.9 entry (Regroup Entry)

This element specifies a single entry in a regrouptable (§19.2.2.23). Each entry is a pair mapping a current regroupid value to an old one. This is used to restore regrouping information on the regrouped object. A value of zero indicates no previous group.

[Example: The zero value of the old attribute indicates that if the shapes with regroupid 1 are regrouped, the restored group was not previously grouped with any other shapes:

```
<o:regrouptable v:ext="edit">
  <o:entry new="1" old="0"/>
</o:regrouptable>
```

end example]

| Parent Elements           |
|---------------------------|
| regrouptable (§19.2.2.23) |

| Attributes         | Description                                                                                                                                    |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| new (New Group ID) | Specifies the ID of the new group. Default is 0.<br><br>The possible values for this attribute are defined by the W3C XML Schema int datatype. |
| old (Old Group ID) | Specifies the ID of the old group. Default is 0.<br><br>The possible values for this attribute are defined by the W3C XML Schema int datatype. |

[Note: The W3C XML Schema definition of this element's content model (CT\_Entry) is located in SA.6.2. *end note*]

#### 19.2.2.10 `equationxml` (Storage for Alternate Math Content)

This element specifies XML markup for mathematical text which can be used in place of the shape data. [Note: Applications are encouraged to use an open format, such as the Math format defined in ISO/IEC 29500-1, or the MathML format, a Recommendation from the World Wide Web Consortium, available at <http://www.w3.org/TR/MathML/>. *end note*]

[Example: Consider a VML object which specifies alternate math content using MathML. This object might contain the following XML markup:

```
<v:shape>
...
<o:equationXml contentType="mathml">
  <mrow>
    <mrow>
      <msup>
        <mi>x</mi>
        <mn>2</mn>
      </msup>
      <mo>+</mo>
      <mrow>
        <mn>4</mn>
        <mo>*</mo>
        <mi>x</mi>
      </mrow>
      <mo>+</mo>
      <mn>4</mn>
    </mrow>
    <mo>=</mo>
    <mn>0</mn>
  </mrow>
</o:equationXml>
</v:shape>
```

The embedded MathML markup is stored within the `equationxml` element. *end example*

If a producer that wants interoperability supports equations, it should use one of the following standard formats:

- Office Open XML Math (Part 1, §22.1)
- W3C MathML 2.0

| Parent Elements                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Child Elements               | Subclause |
|------------------------------|-----------|
| Any element in any namespace | n/a       |

| Attributes                                              | Description                                                                                                                                                                                                                                                 |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| contentType<br>(Content Type of Alternate Math Content) | Specifies the syntax of the markup used for the alternate math content stored in the <code>equationxml</code> attribute.<br><br>The possible values for this attribute are defined by the <code>ST_AlternateMathContentType</code> simple type (§19.2.3.1). |

[Note: The W3C XML Schema definition of this element's content model (`CT_EquationXml`) is located in §A.6.2. *end note*]

#### 19.2.2.11 extrusion (3D Extrusion)

This element specifies a parallel or perspective extrusion of a 2-D shape, creating the appearance of a 3-D shape. Lighting is controlled via two independent point light sources. Extrusions are defined as either perspective or parallel.

[Example:

```
<v:polyline points="0pt,75pt 20pt,45pt 10pt,50pt 30pt,10pt
  50pt,50pt 40pt,45pt 60pt,75pt 0pt,75pt" fillcolor="#00a000">
  <o:extrusion on="t" backdepth="20pt"
    lightposition="30000,10000,10000"/>
</v:polyline>
```

*end example]*

| Parent Elements                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); background (Part 1, §17.2.1); curve (§19.1.2.3); group (§19.1.2.7); hdrShapeDefaults (§14.7.2.1); image (§19.1.2.10); line (§19.1.2.12); object (Part 1, §17.3.3.19); oval (§19.1.2.13); pict (§14.2.2.2); pict (§14.5.1); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapeDefaults (§14.7.2.2); shapedefaults (§19.2.2.28); shapetype (§19.1.2.20) |

| Attributes                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| autorotationcenter<br>(Center of Rotation Toggle) | <p>Specifies whether the center of rotation is the geometric center of the extrusion. Default is false. If true, the geometric center of an extruded shape is (0,0,0). If false, the center of rotation is determined by the rotationcenter attribute.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                             |
| backdepth<br>(Backward Extrusion Depth)           | <p>Specifies the amount of backward extrusion. Default is 36 pt, default units are points.</p> <p>[Example:</p> <pre>&lt;o:extrusion on="true" backdepth="15pt"&gt; &lt;/o:extrusion&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                |
| brightness<br>(Brightness)                        | <p>Specifies the overall brightness of a scene. Default is 0.3. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied (as "f" indicates the value is a fraction). For example, a value of "52429f" represents 52429/65536 or 0.8.</p> <p>This quantity is not specified using units. The numeric values are in the range 0 to 1 (0f to 65536f), where 0 implies darkness and 1 implies light saturation.</p> <p>[Example:</p> |

| Attributes                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p data-bbox="415 1335 537 1367"><i>[Example:</i></p> <pre data-bbox="456 1409 1013 1503">&lt;o:extrusion on="true" color="lime" colormode="custom"&gt; &lt;/o:extrusion&gt;</pre> <div data-bbox="415 1541 550 1675">  </div> <p data-bbox="415 1717 574 1749"><i>end example]</i></p> <p data-bbox="415 1787 1395 1850">The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                      |

| Attributes                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>colormode</b><br>(Extrusion Color Mode) | <p>Specifies whether the extrusion color is defined by the color attribute or is the same as the shape's fill color. Default is auto.</p> <p>[Example:</p> <pre>&lt;o:extrusion on="true" color="lime"   colormode="auto"&gt; &lt;/o:extrusion&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorMode simple type (§19.2.3.6).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>diffusivity</b> (Diffuse Reflection)    | <p>Specifies the amount of diffusion of reflected light from an extruded shape, defined as the ratio of incident light to diffused reflected light. Default is 1. Normal values are in the range 0 to 1. This numeric value can also be specified in 1/65536ths if a trailing "f" is supplied (as "f" indicates the value is a fraction). [Example: A value of "52429f" represents 52429/65536 or 0.8. end example]</p> <p>This quantity is not specified using units. The numeric values are in the range 0 to 1 (0f to 65536f), where 0 implies all reflected light is diffuse and 1 implies no reflected light is diffuse.</p> <p>Specularity and diffusivity should be considered together as it is possible, though physically incorrect, to define more reflected light than incident light. This is the case if the amount of specularly reflected light and diffusely reflected light add up to more than the amount of incident light.</p> <p>[Example:</p> <pre>&lt;o:extrusion on="true" diffusivity=".75"&gt; &lt;/o:extrusion&gt;</pre>  <p>diffusivity="0"</p> <p>diffusivity="0.5"</p> |

|                                     | <p>down and toward the viewer, respectively.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| shininess<br>(Shininess)            | <p>Specifies the concentration of the reflected light on an extrusion surface. Default is 5. The range of values should be constrained to 0-10. Reflection intensity typically grows exponentially with the shininess value.</p> <p>High values (8-10) approximate the shininess of a mirror and low values (2-3) approximate a speckled effect. Reflections do not mirror other objects; only pinpoint light sources are reflected.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                 |
| skewamt (Extrusion Skew)            | <p>Specifies the amount of skew, or length, of a parallel extrusion. Default is 50%. Applies only if the extrusion type is <code>parallel</code>. This attribute and <code>backdepth</code> interact to create the actual extrusion length. Allowed values are in the range 0 (0%) to 1 (100%).</p> <p>[Example:</p> <pre data-bbox="451 951 1063 1014">&lt;o:extrusion on="true" skewamt="100%"&gt; &lt;/o:extrusion&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| skewangle<br>(Extrusion Skew Angle) | <p>Specifies the angle of the skew of a parallel extrusion. Default is 225 degrees. Angles are measured in degrees, counterclockwise from the negative x-axis. Applies only if the extrusion type is <code>parallel</code>.</p> <p>[Example:</p> <pre data-bbox="451 1627 1063 1690">&lt;o:extrusion on="true" skewangle="25"&gt; &lt;/o:extrusion&gt;</pre>  <p>]</p>                                                                                                                                                                                |

| Attributes                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |       |             |          |                                                                                                                                                               |             |                                                  |

|                              | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |          |                                                                                                                                                               |             |                                                  |
| specularity<br>(Specularity) | <p>Specifies the specularity of an extruded shape, defined as the ratio of incident light to specularly reflected light. Default is 0. Normal values are in the range 0 to 1. This numeric value can also be specified in 1/65536ths if a trailing "f" is supplied (as "f" indicates the value is a fraction). [Example: A value of "52429f" represents 52429/65536 or 0.8. <i>end example]</i></p> <p>Specularity and diffusity should be considered together as it is possible, though physically incorrect, to define more reflected light than incident light. This is the case if the amount of specularly reflected light and diffusely reflected light add up to more than the amount of incident light.</p> <p>[Example: The secondary light source is turned off so only the primary has an effect. Although the effect is subtle, the first cylinder has a sharper specular reflection on its edge:</p> <pre>&lt;o:extrusion on="true" specularity="1"   lightposition="10000, -10000, 10000"   lightlevel2="0"&gt; &lt;/o:extrusion&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |       |             |          |                                                                                                                                                               |             |                                                  |
| type (Extrusion Type)        | <p>Specifies the way that the shape is extruded. Default is parallel. Positive numbers are to the right, down and toward the viewer, respectively.</p> <p data-bbox="418 1325 535 1352">[Example:</p> <pre data-bbox="456 1394 1110 1493"> &lt;o:extrusion on="true" type="perspective"   viewpoint="500000,-100000,100000"&gt; &lt;/o:extrusion&gt; </pre> <div data-bbox="414 1528 602 1654">  </div> <p data-bbox="418 1696 574 1724">end example]</p> <p data-bbox="418 1766 1377 1829">The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| viewpointorigin                    | Specifies the origin of the viewpoint vector for perspective extrusions. This is the origin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Attributes                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (Extrusion Viewpoint Origin) | <p>of the vector whose opposite end is given by the viewpoint attribute. This origin is always within the bounding box of the shape. Default is "0.5,-0.5".</p> <p>The viewpoint is specified in terms of the x and y values of the original shape. The x and y values are in the range 0.5 to -0.5 (50% to -50% of the shape's coordinate origin). Larger numbers move the viewpoint outside the bounding box.</p> <p>[Example:</p> <pre data-bbox="456 569 1109 699">&lt;o:extrusion on="true" type="perspective"   viewpoint="500000,-100000,100000"   viewpointorigin="0,1"&gt; &lt;/o:extrusion&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (CT Extrusion) is located in §A.6.2. *end note*]

#### 19.2.2.12 FieldCodes (WordprocessingML Field Switches)

This element specifies the WordprocessingML field switches which shall be stored with an embedded object, using the set of field switches defined by the LINK field, as specified in Part 1, §17.16. This element shall only be used within a WordprocessingML document, and shall specify the exact field switches for the field which represents the object..

[*Rationale*: Legacy word processors used fields to represent embedded objects – this element stores the field switches not explicitly defined using individual Office VML Drawing elements for embeddings so as not to use the fidelity of their contents. *end rationale*]

[Example: The following example inserts an embedded object and specifies additional properties as defined by the LINK field.

```
<o:OLEObject ...>
  <o:FieldCodes>\f 0</o:FieldCodes>
</o:OLEObject>
```

This embedded object specifies additional LINK field code values of \f 0, which specifies that the embedded object shall retain its source formatting (as defined in Part 1, §17.16).

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

#### 19.2.2.14 idmap (Shape ID Map)

This element specifies how shape IDs in the document have been generated. This is an optional element included to allow applications a mechanism for storing information they need to persist related to generating shape IDs.

| Parent Elements          |
|--------------------------|
| shapelayout (§19.2.2.29) |

| Attributes                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data (Shape IDs)                            | <p>Specifies the data the application uses to generate shape IDs.</p> <p>[<i>Example:</i> An application might choose to reserve blocks of shape ID numbers for each part in the package. Each block of 1024 shape IDs could be referred to by index and this index stored in the data attribute. The data value for a given part might then be:</p> <pre>&lt;o:idmap v:ext="edit" data="1"/&gt;</pre> <p>indicating that all the IDs in block 1 are reserved by this part ( meaning shape IDs from 1 to 1024 cannot be used ). The application's internal constraint would be that each part reserve a different set of IDs. Another part, that contains more shapes, might use:</p> <pre>&lt;o:idmap v:ext="edit" data="2,3"/&gt;</pre> <p>In this case, shape IDs from 1025 to 3072 [ 3 x 1024 ] cannot be used ).</p> <p>Another implementation might choose to store more verbose information in this attribute. Yet another implementation might ignore this element completely.</p> <p><i>end example</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| ext (VML Extension Handling Behavior)       | <p>Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Namespace:<br>urn:schemas-microsoft-com:vml | <p>[<i>Rationale:</i> This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i>]</p> <p>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

### 19.2.2.15 ink (Ink)

This element specifies the presence of an ink object. An ink object is a VML object which allows applications to store data for ink annotations. [Note: Applications are encouraged to use an open-ink format, such as the Ink Markup Language (InkML). *end note*]

[Example:

```
<v:shape ... >
  <o:ink i="..." annotation="t" contentType="application/inkml+xml"/>
</v:shape>
<v:shape ... >
  <o:ink i="AMgFHQSWC+YFASAAaAwAAAAAMA..." annotation="t"
    contentType="application/x-ms-ink"/>
</v:shape>
```

*end example]*

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotation<br>(Annotation Flag) | <p>Specifies whether the ink object was created as an annotation rather than through pen input. Default is false. [Rationale This allows an application to treat annotation ink objects as any other annotation. For example, if annotations are hidden, the application can hide the ink object. An ink object that represents primary user input through a pen can be left visible. <i>end rationale</i>]</p> <p>[Example:</p> <pre>&lt;o:ink ... annotation="true"&gt; &lt;/o:ink&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| contentType<br>(Content Type)   | <p>Specifies the format of the ink content stored in the i attribute. The syntax is a content type as defined in IETF RFC 2616.</p> <p>If this attribute is omitted, the application should attempt to determine the content type by reading the contents of the i element.</p> <p>The possible values for this attribute are defined by the ST_ContentType simple type</p>                                                                                                                                                                                                                                                      |

| Attributes   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | (§19.2.3.9).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| i (Ink Data) | <p>Specifies additional ink object information which shall be associated with the parent VML shape. The VML shape specifies the information necessary to render the ink, and this attribute can be used to store additional data about the VML shape(s) representing ink. This attribute's contents are formatted as specified by the content Type attribute, but are optional and can be ignored if not recognized.</p> <p>[Example:</p> <pre data-bbox="451 583 695 646">&lt;o:ink ... i="..."&gt; &lt;/o:ink&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Ink](#)) is located in §A.6.2. end note]

#### 19.2.2.16 left (Text Box Left Stroke)

This element specifies the stroke properties for the left border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown.

[Example: The text box borders are set independently. The bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

end example]

|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| alhref (Alternate Image Reference)      | <p>Specifies an alternate reference for an image in Macintosh PICT format.</p> <p>[Example:</p> <pre>&lt;v:stroke ... alhref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| color (Stroke Color)                    | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[Example: The shape stroke is blue:</p> <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                      |
| color2 (Stroke Alternate Pattern Color) | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[Example: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;</pre> |

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                 | <pre>&lt;v:stroke filltype="pattern" weight="10pt"   src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre>  <p>, where myimage.gif is: </p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  |

| Attributes                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                | The possible values for this attribute are defined by the ST_StrokeJoinStyle simple type (§19.1.3.11).                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| linestyle (Stroke Line Style)  | <p>Specifies the line style of the stroke. Default is single.</p> <ul style="list-style-type: none"> <li>• single</li> <li>• thinThin</li> <li>• thinThick</li> <li>• thickThin</li> <li>• thickBetweenThin</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke linestyle="thickThin" weight="5pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeLineStyle simple type (§19.1.3.12).</p> |
| miterlimit (Miter Joint Limit) | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p> <p>[Example:</p> <pre>&lt;v:stroke joinstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p>              |
| on (Stroke Toggle)             | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p>                                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   | <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                           |
| opacity (Stroke Opacity)          | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| src (Stroke Image Location)       | <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                            |
| startarrow (Line Start Arrowhead) | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> </ul>                                                                                                                                                                                                                                    |

| Attributes                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <ul style="list-style-type: none"> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p>                                                                                         |
| startarrowlength<br>(Line Start<br>Arrowhead Length) | <p>Specifies the length of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowlength="long" ... /&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p> |
| startarrowwidth<br>(Line Start<br>Arrowhead Width)   | <p>Specifies the width of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• narrow</li> <li>• medium</li> <li>• wide</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</pre>                                                                                                                                                                                                                         |

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                        |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p>                                                                                                                                                               |
| title (Stroke Title)   | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <pre data-bbox="451 751 971 821">&lt;v:fill ... o:title="alt text" ... &gt; &lt;/v:fill&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| weight (Stroke Weight) | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's strokeweight attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                  |

[Note: The W3C XML Schema definition of this element's content model (CT\_StrokeChild) is located in §A.6.2.  
*end note]*

#### 19.2.2.17 LinkType (Embedded Object Alternate Image Request)

This element specifies the kind of image which shall be requested from an embedded object's host application when the contents of a linked image are updated within a document. When linked images are stored in documents, the only items stored in the document are an image representation and a link to the source. This element specifies the kind of image which shall be requested from the source on update.

[Note: The formats available can vary based on the kind of embedded object - this information is typically queried from the embedded object's application before it is stored. This setting can be omitted, and is usually stored for performance reasons, so it is not queried on each update of the linked object. *end note]*

The possible values for this element are defined by the ST\_OLELinkType simple type (§19.2.3.19).

| Parent Elements        |
|------------------------|
| OLEObject (§19.2.2.20) |

[*Note:* The W3C XML Schema definition of this element's content model ([ST\\_OLELinkType](#)) is located in §A.6.2.  
*end note*]

### 19.2.2.18 lock (Shape Protections)

This element specifies locks against actions that can be effected in the UI of an authoring application or programmatically through an object model.

[*Example:* The following snippet locks the shape's aspect ratio and text from user edits.

```
<v:shape ... >
  <o:lock v:ext="edit" aspectratio="t" text="t"/>
</v:shape>
```

*end example*]

| Parent Elements                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); background (Part 1, §17.2.1); curve (§19.1.2.3); group (§19.1.2.7); hdrShapeDefaults (§14.7.2.1); image (§19.1.2.10); line (§19.1.2.12); object (Part 1, §17.3.3.19); oval (§19.1.2.13); pict (§14.2.2.2); pict (§14.5.1); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapeDefaults (§14.7.2.2); shapedefaults (§19.2.2.28); shapetype (§19.1.2.20) |

| Attributes                            | Description                                                                                                                                                                                                 |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| adjusthandles<br>(Handles Lock)       | Specifies whether the handles of a shape are locked from being edited. Default is <i>false</i> .<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).     |
| aspectratio (Aspect Ratio Lock)       | Specifies whether the aspect ratio of a shape is locked from being edited. Default is <i>false</i> .<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5). |
| cropping (Cropping Lock)              | Specifies whether cropping of a shape is locked from being edited. Default is <i>false</i> .<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).         |
| ext (VML Extension Handling Behavior) | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.                                   |
| Namespace:                            | [ <i>Rationale:</i> This part of the original VML specification is included to assist applications                                                                                                          |

| Attributes                      | Description                                                                                                                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| urn:schemas-microsoft-com:vml   | that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i><br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2).                                                                  |
| grouping (Grouping Lock)        | Specifies whether a shape is locked from being grouped. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                                      |
| position (Position Lock)        | Specifies whether the position of a shape is locked from being edited. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                       |
| rotation (Rotation Lock)        | Specifies whether the rotation of a shape is locked from being edited. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                       |
| selection (Selection Lock)      | Specifies whether the shape is locked from being selectable in an editor. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                    |
| shapetype (AutoShape Type Lock) | Specifies whether the AutoShape type is locked from being edited. Default is false. If true, the type of an AutoShape cannot be changed in a graphical editor.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5). |
| text (Text Lock)                | Specifies whether the text attached to a shape is locked from being edited. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                  |
| ungrouping (Ungrouping Lock)    | Specifies whether a grouped shape is locked from being ungrouped. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                            |
| vertices (Vertices Lock)        | Specifies whether the vertices of a path are locked from being edited. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                       |

[Note: The W3C XML Schema definition of this element's content model (CT\_Lock) is located in §A.6.2. *end note*]

19.2.2.19      **LockedField (Embedded Object Cannot Be Refreshed)**

This element specifies that the embedded object's appearance is locked - that is, that the object's current representation shall be locked to prevent any user interaction or automatic application behavior from modifying its contents.

This element shall contain no content - its presence indicates that the embedded object is locked, and its omission allows the field to be updated.

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements        |
|------------------------|
| OLEObject (§19.2.2.20) |

[*Note:* The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9. *end note*]

19.2.2.20      **OLEObject (Embedded OLE Object)**

This element specifies an embedded object.

[*Example:* The following markup defines a reference to an embedded object using Bonobo. The ProgId attribute contains the shared library that contains the widget. The content type of the referred part identifies the referenced Bonobo object.

```
<OLEObject r:id="rb1" ProgId="OAFIID:Bonobo_Sample_Calculator">
...
</OLEObject>
```

The target of the relationship with ID rb1, defines the Bonobo object itself. This example shows a link to a sample Bonobo widget taken from the article <http://www.ibm.com/developerworks/webservices/library/co-bnbo2.html>, which also provides an introduction to Bonobo. *end example*]

[*Example:* The following demonstrates a video file embedded in a WordprocessingML document:

```
<w:object ...>
  <v:shape id="_x0000_i1025" type="#_x0000_t75"
    style="width:1in;height:24pt" o:ole="">
    <v:imagedata r:id="rId4" o:title=""/>
  </v:shape>
  <o:OLEObject Type="Embed" ProgID="AVIFile" ShapeID="_x0000_i1025"
    DrawAspect="Content" ObjectID="_1219561732" r:id="rId5"/>
</w:object>
```

*end example*]

| id (Relationship)<br><br>Namespace:<br>.../officeDocument<br>/2006/relationships | <p>Specifies the actual OLE object using a standard part relationship lookup.</p> <p>[Example:</p> <pre>&lt;o:OLEObject ... r:id="rId5"&gt; &lt;/o:OLEObject&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_RelationshipId simple type (Part 1, §22.8.2.1).</p>                                                                                                                                                       |
| ObjectID (Unique ID for Embedded Object)                                         | <p>Specifies a unique ID identifying the embedded object.</p> <p>[Example: The following markup defines a reference to a linked object using KParts. The name attribute contains the shared library that contains the plugin. The item element contains the name of the plugin. The content type of the referred part would identifies the referenced KParts object.</p> <pre>&lt;oleLink r:id="rKp1" progId="libhtmlvalidatorplugin"&gt; ... &lt;/oleLink&gt;</pre> |

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | <p>The following XML, contained in the target of the relationship with ID rKp1, defines the KPart object, and follows the kpartgui DTD:</p> <pre>&lt;!DOCTYPE kpartgui SYSTEM "kpartgui.dtd"&gt; &lt;kpartgui library="libhtmlvalidatorplugin" name="htmlvalidatorplugin" version="1" &gt;   &lt;MenuBar&gt;     &lt;Menu name="tools"&gt;&lt;Text&gt;&amp;Tools&lt;/Text&gt;       &lt;Action name="validatewebpage"/&gt;     &lt;/Menu&gt;   &lt;/MenuBar&gt; &lt;/kpartgui&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| ProgID (Object Link Identifier) | <p>Specifies the embedded object server application associated with the embedded object.</p> <p>[Example:</p> <pre>&lt;o:OLEObject ... ProgID="AVIFile"&gt; &lt;/o:OLEObject&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                  |
| ShapeID (Embedded Object Shape) | <p>Specifies the shape with which the embedded object is associated. A VML shape provides the visual placeholder for an embedded object and this attribute is set to the id of the placeholder shape.</p> <p>[Example:</p> <pre>&lt;o:OLEObject ... ShapeID="_x0000_i1025"&gt; &lt;/o:OLEObject&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                               |
| Type (Embedded Object Type)     | <p>Specifies the kind of embedded object connection.</p> <p>[Example:</p> <pre>&lt;o:OLEObject ... Type="Embed"&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Attributes                                                  | Description                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             | <p>&lt;/o:OLEObject&gt;</p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_OLEType simple type (§19.2.3.20).</p>                                                                                                                                                                                               |
| <p>UpdateMode<br/>(Update Mode for<br/>Embedded Object)</p> | <p>Specifies how the object is updated with new data if the Type is Link - automatically or on-demand by the user.</p> <p>[Example:</p> <pre>&lt;o:OLEObject ... UpdateMode="Always"&gt; &lt;/o:OLEObject&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_OLEUpdateMode simple type (§19.2.3.21).</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_OLEObject) is located in §A.6.2. *end note]*

#### 19.2.2.21 proxy (Shape Reference)

This element specifies an entry in a `r` element rule that contains a reference to one or more shapes that are participating in the rule.

[Example: The following rule defines a connection between two shapes. The shape with id `_s1036` connects shape `_s1033` to `_s1032`:

```
<o:shapelayout v:ext="edit">
  <o:rules v:ext="edit">
    <o:r id="V:Rule1" type="connector" idref="#_s1036">
      <o:proxy start="" idref="#_s1033" connectloc="0"/>
      <o:proxy end="" idref="#_s1032" connectloc="2"/>
    </o:r>
  </o:rules>
</o:shapelayout>
```

*end example]*

| Parent Elements |

| Attributes                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| connectloc<br>(Connection Location) | <p>Specifies the location on the shape where the connector is attached. The value is an index into the list of connection points defined in the shape - see the connectlocs attribute. Default is 0. Only used in a connector rule.</p> <p>The possible values for this attribute are defined by the W3C XML Schema int datatype.</p>                                                                                                                                                                     |
| end (End Point Connection Flag)     | <p>Specifies whether the connector's end point is connected to the shape. Default is false. Only used in a connector rule.</p> <p>The possible values for this attribute are defined by the ST_TrueFalseBlank simple type (§20.1.2.6).</p>                                                                                                                                                                                                                                                                |
| idref (Proxy Shape Reference)       | <p>Specifies a reference to a shape in the current document. Default is no value. A shape name is used as the reference mechanism; this is not a relationship ID.</p> <p>This attribute indicates that the referenced shape is part of this rule. Two or more proxy elements are used for an alignment rule. A connector rule uses one or two, indicating which shapes the connector is attached to.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| start (Start Point Connection Flag) | <p>Specifies whether the connector's start point is connected to the shape. Default is false. Only used in a connector rule. If both start and end are specified the later one takes precedence.</p> <p>The possible values for this attribute are defined by the ST_TrueFalseBlank simple type (§20.1.2.6).</p>                                                                                                                                                                                          |

[Note: The W3C XML Schema definition of this element's content model (CT\_Proxy) is located in §A.6.2. *end note*]

#### 19.2.2.22 r (Rule)

This element specifies a rule entry in a rules element rule set that describes how a certain shape or set of shapes behaves during editing.

[Example: The following rule defines a connection between two shapes. The shape with id \_s1036 connects shape \_s1033 to \_s1032:

```
<o:shapelayout v:ext="edit">
  <o:rules v:ext="edit">
    <o:r id="V:Rule1" type="connector" idref="#_s1036">
      <o:proxy start="" idref="#_s1033" connectloc="0"/>
      <o:proxy end="" idref="#_s1032" connectloc="2"/>
    </o:r>
  </o:rules>
```

</o:shapelayout>

*end example]*

| Attributes                   | Description                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| how (Alignment Rule Type)    | <p>Specifies the kind of alignment for an alignment rule. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• top</li> <li>• middle</li> <li>• bottom</li> <li>• left</li> <li>• center</li> <li>• right</li> </ul> <p>The possible values for this attribute are defined by the ST_How simple type (§19.2.3.15).</p>                                       |
| id (Rule ID)                 | <p>Specifies an identifier for the rule. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                            |
| idref (Rule Shape Reference) | <p>Specifies a reference to a shape in the current document that is the primary shape in the rule. [<i>Example:</i> For a connector rule, the connector. <i>end example</i>]</p> <p>Default is no value. A shape name is used as the reference mechanism; this is not a relationship ID.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| type (Rule Type)             | <p>Specifies the kind of the rule. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• arc</li> <li>• callout</li> <li>• connector</li> <li>• align</li> </ul>                                                                                                                                                                                              |

| Attributes | Description                                                                                  |
|------------|----------------------------------------------------------------------------------------------|
|            | The possible values for this attribute are defined by the ST_RType simple type (§19.2.3.22). |

[*Note:* The W3C XML Schema definition of this element's content model (CT\_R) is located in §A.6.2. *end note*]

### 19.2.2.23 regroupable (Shape Grouping History)

This element specifies a list of entries which describe how shapes were previously grouped so they can be regrouped. The regroupid attribute of shapes indicates which shapes belong together when a regroup is performed. The regrouptable tracks the previous regroupid that should be assigned to all shapes with the given current regroupid.

[*Example:* Consider a document containing two rectangles and a circle. The rectangles are grouped together, then that group is grouped with the circle. This new group is then ungrouped, leaving the circle and grouped rectangles. The document might contain the following snippets:

```
<v:oval ... o:regroupid="1"/>
<v:group ... o:regroupid="1"/>
  <v:rect ... />
  <v:rect ... />
</v:group>

<o:regrouptable v:ext="edit">
  <o:entry new="1" old="0"/>
</o:regrouptable>
```

The regroupid attribute indicates that the shapes with regroupid 1 were previously grouped together. The entry indicates that if those shapes are regrouped, the new group formed should not have a regroupid value as it was not previously ungrouped.

If the two rectangles are ungrouped, the document reflects that the rectangles were previously grouped and that their old group was previously grouped:

```
<v:oval ... o:regroupid="1"/>
<v:rect ... o:regroupid="2"/>
<v:rect ... o:regroupid="2"/>

<o:regrouptable v:ext="edit">
  <o:entry new="1" old="0"/>
  <o:entry new="2" old="1"/>
</o:regrouptable>
```

*end example*]

| ext (VML Extension Handling Behavior)       | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.                                                                                                                                  |
| Namespace:<br>urn:schemas-microsoft-com:VML | [ <i>Rationale</i> : This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i> ]<br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2). |

[*Note*: The W3C XML Schema definition of this element's content model ([CT\\_RegroupTable](#)) is located in §A.6.2. *end note*]

#### 19.2.2.24 rel (Diagram Relationship)

This element specifies a relationship between two diagram nodes. An optional third node that exists between the primary two can also be included. The relationship has an implicit order since it describes the source and destination nodes.

[*Example*: In the cycle diagram below, shape 1036 (the shape that is the text box for the text "2") is the first node. A relationship exists between shape 1036 and shape 1044 (the text box containing "1"). In between those shapes is shape 1038 (the yellow arrow).

```
<o:relationtable v:ext="edit">
  <o:rel v:ext="edit" idsrc="#_s1036" iddest="#_s1036"/>
  <o:rel v:ext="edit" idsrc="#_s1042" iddest="#_s1036" idcntr="#_s1043"/>
  <o:rel v:ext="edit" idsrc="#_s1044" iddest="#_s1042" idcntr="#_s1045"/>
  <o:rel v:ext="edit" idsrc="#_s1036" iddest="#_s1044" idcntr="#_s1038"/>
</o:relationtable>

<v:rect id="_s1036" ... >
  <v:textbox ... ><...>2</...></v:textbox>
</v:rect>
```

```
<v:rect id="_s1044" ... >
  <v:textbox ... ><...>1</...></v:textbox>
</v:rect>
```

```
<v:shape id="_s1038" ... />
```

end example]

| Attributes                                | Description                                                                                                                                                                                                                                                                                                          |
|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                          |
| idsrc (Diagram Relationship Source Shape) | <p>Specifies the identifier of the shape at the source of the relationship.</p> <p>[Example:</p> <pre data-bbox="451 583 857 646">&lt;o:rel ... idsrc="#s_1036"&gt; &lt;/o:rel&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Relation](#)) is located in §A.6.2. *end note]*

#### 19.2.2.25 relationtable (Diagram Relationship Table)

This element specifies a list that describes the relationships among diagram nodes.

[Example: The following table describes the parent-child relationships for shapes in an organization chart. The first entry describes the top-level shape in the diagram. The next two rows describe that the shapes are subordinates to the first shape. Shape 1029 is a subordinate of shape 1028. Shape 1032, a connector in this case, is in between the two.

```
<o:relationtable v:ext="edit">
  <o:rel v:ext="edit" idsrc="#_s1028" iddest="#_s1028"/>
  <o:rel v:ext="edit" idsrc="#_s1029" iddest="#_s1028" idcntr="#_s1032"/>
  <o:rel v:ext="edit" idsrc="#_s1030" iddest="#_s1028" idcntr="#_s1033"/>
</o:relationtable>
```

*end example]*

| Parent Elements     |

|----------------------------|------------|
| rel (Diagram Relationship) | §19.2.2.24 |

| Attributes                                  | Description                                                                                                                                                                                                                                                                                                |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ext (VML Extension Handling Behavior)       | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.                                                                                                                                  |
| Namespace:<br>urn:schemas-microsoft-com:vml | [ <i>Rationale</i> : This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i> ]<br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2). |

[*Note*: The W3C XML Schema definition of this element’s content model (CT\_RelationTable) is located in §A.6.2. *end note*]

### 19.2.2.26 right (Text Box Right Stroke)

This element specifies the stroke properties for the right border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown.

[*Example*: The text box borders are set independently. The bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

*end example*]

| Parent Elements                                                                                                                                                           |

| <b>althref</b> (Alternate Image Reference)     | <p>Specifies an alternate reference for an image in Macintosh PICT format.</p> <p>[Example:</p> <pre>&lt;v:stroke ... althref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>color</b> (Stroke Color)                    | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[Example: The shape stroke is blue:</p> <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>color2</b> (Stroke Alternate Pattern Color) | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[Example: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre> |

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                                 |   <p>, where myimage.gif is:</p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p><i>[Example:</i></p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre> |

| Attributes                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                            |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                     |
| endarrow (Line End Arrowhead)              | <p>Specifies an arrowhead for the end of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke endarrow="classic"/&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p> |
| endarrowlength (Line End Arrowhead Length) | <p>Specifies the length of the arrowhead at the end of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... endarrowlength="long" ... /&gt;</pre>  <p><i>end example]</i></p>                                                                                                                                                                                                                 |

| Attributes                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| atmost                                            | Image is no bigger than imagesize.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |             |        |                       |         |                                        |        |                                    |
| <b>imagesize</b> (Stroke Image Size)              | <p>Specifies the size of the image for the stroke. Default is the size of the image.</p> <p>[Example:</p> <pre data-bbox="456 1514 1065 1545">&lt;v:stroke ... imagesize="10pt,10pt" ... /&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |       |             |        |                       |         |                                        |        |                                    |
| <b>insetpen</b> (Inset Border From Path)          | <p>Specifies that the border shall be displayed inside of the path defining the shape, rather than along the path (the default border placement), or outside of the path as might be done with an image.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                       |         |                                        |        |                                    |

| Attributes                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | <p>[Example:</p> <pre>&lt;v:shape ... insetpen="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>joinstyle (Line End Join Style))</p> | <p>Specifies the join style for line ends. Default is round.</p> <ul style="list-style-type: none"> <li>• round</li> <li>• bevel</li> <li>• miter</li> </ul> <p>[Example:</p> <pre>&lt;v:polyline strokeweight="10pt" strokecolor="navy" points="10pt,10pt,50pt,50pt,90pt,10pt"&gt; &lt;v:stroke joinstyle="bevel"/&gt; &lt;/v:polyline&gt;</pre> <div style="display: flex; align-items: center; margin-top: 10px;">  <div style="margin-left: 20px;"> <p>joinstyle="round"</p> <p>joinstyle="bevel"</p> <p>joinstyle="miter"</p> </div> </div> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeJoinStyle simple type (§19.1.3.11).</p> |
| <p>linestyle (Stroke Line Style)</p>    | <p>Specifies the line style of the stroke. Default is single.</p> <ul style="list-style-type: none"> <li>• single</li> <li>• thinThin</li> <li>• thinThick</li> <li>• thickThin</li> <li>• thickBetweenThin</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Attributes                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | <p>[Example:</p> <pre>&lt;v:stroke linestyle="thickThin" weight="5pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeLineStyle simple type (§19.1.3.12).</p>                                                                                                                                                                                                           |
| <p>miterlimit (Miter Joint Limit)</p> | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p> <p>[Example:</p> <pre>&lt;v:stroke joinstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p> |
| <p>on (Stroke Toggle)</p>             | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p>                                                                                                         |

| Attributes                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                    |
| <p>opacity (Stroke Opacity)</p>          | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>src (Stroke Image Location)</p>       | <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                          |
| <p>startarrow (Line Start Arrowhead)</p> | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>                                                                 |

| Attributes                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p>                                                                                                                                                                                                                                                                                                                       |
| <b>startarrowlength</b><br>(Line Start<br>Arrowhead Length) | <p>Specifies the length of the arrowhead at the start of a line. Default is <i>medium</i>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <i>short</i></li> <li>• <i>medium</i></li> <li>• <i>long</i></li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowlength="long" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p> |
| <b>startarrowwidth</b><br>(Line Start<br>Arrowhead Width)   | <p>Specifies the width of the arrowhead at the start of a line. Default is <i>medium</i>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <i>narrow</i></li> <li>• <i>medium</i></li> <li>• <i>wide</i></li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p>  |

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| title (Stroke Title)   | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <pre>&lt;v:fill ... o:title="alt text" ... &gt; &lt;/v:fill&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| weight (Stroke Weight) | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's strokeweight attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                               |

[Note: The W3C XML Schema definition of this element's content model ([CT StrokeChild](#)) is located in §A.6.2.  
end note]

#### 19.2.2.27 rules (Rule Set)

This element specifies a list of rule entries which describe how a certain shape or sets of shapes should behave during editing.

[Example: The following rule defines a connection between two shapes. The shape with id \_s1036 connects shape \_s1033 to \_s1032:

```
<o:shapelayout v:ext="edit">
  <o:rules v:ext="edit">
    <o:r id="V:Rule1" type="connector" idref="#_s1036">
      <o:proxy start="" idref="#_s1033" connectloc="0"/>
      <o:proxy end="" idref="#_s1032" connectloc="2"/>
    </o:r>
  </o:rules>
</o:shapelayout>
```

end example]

| Parent Elements          |
|--------------------------|
| shapelayout (§19.2.2.29) |

| Child Elements | Subclause  |
|----------------|------------|
| r (Rule)       | §19.2.2.22 |

| Attributes                                 | Description                                                                                                                                                                                                                                                                                                |
|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ext (VML Extension Handling Behavior)      | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.                                                                                                                                  |
| Namespace:<br>urn:schemas-microsoft-com:vm | [ <i>Rationale</i> : This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i> ]<br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2). |

[*Note*: The W3C XML Schema definition of this element's content model ([CT\\_Rules](#)) is located in §A.6.2. *end note*]

#### 19.2.2.28 **shapedefaults** (New Shape Defaults)

This element specifies the defaults that are used when creating new shapes. These defaults are stored once per document.

[*Example*: Consider a case in which an application chooses to store the highest shape ID it has used in the document thus far. This could be used to support the generation of new shape IDs:

```
<o:shapedefaults v:ext="edit" spidmax="1029"/>
```

*end example*]

|                                         | <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>stroke (Shape Stroke Toggle)</p>     | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroke="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                            |
| <p>strokecolor (Shape Stroke Color)</p> | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>style (Shape Styling Properties)</p> | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined</p>                                                                                                                                                                                                                                                                                                                                                      |

| Attributes    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |

If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of</p> |
| Property      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |

|            | mso-wrap-distance-left  | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | mso-wrap-distance-right | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-wrap-distance-top   | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited         | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style          | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position                | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation                | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                     | Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> <p><b>visibility</b></p> <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul> <p><b>width</b></p> <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> <p><b>z-index</b></p> <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li> <li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on top of those with lower numbers. Negative numbers are allowed.</li> </ul> |
|            | <p>The following properties are only used by the textbox element (§19.1.2.22):</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | Property              | Description                                                                                                                                                                                                                                                                                                                                                                                                             |
|            | direction             | <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p> <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                         |
|            | layout-flow           | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | mso-direction-alt     | <p>Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.</p>                                                                                                                                                                                                                                                                                     |
|            | mso-fit-shape-to-text | <p>Specifies whether the shape stretches to fit the text in the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                          |
|            | mso-fit-text-to-shape | <p>Specifies whether the text stretches to fit the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                                       |
|            | mso-layout-flow-alt   | <p>Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.</p>                                                                                                                                                                                               |
|            | mso-next-textbox      | <p>Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.</p>                                                                                                                                                                                                                                                                                          |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                   |
|            | mso-text-scale        | <p>Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.</p>                                                                                                                                                                                                                                                                              |
|            | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the</p>                                                                                                                                                                                                                |

| Property     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |              |                                                                                                                                                                                                                                          |             |                                                                                                                                                              |
| font         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |              |                                                                                                                                                                                                                                          |             |                                                                                                                                                              |
| font-family  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |              |                                                                                                                                                                                                                                          |             |                                                                                                                                                              |
| font-size    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |              |                                                                                                                                                                                                                                          |             |                                                                                                                                                              |
| font-style   | <p>Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. This property determines whether space is removed between each letter (<b>tightening</b>) or added between each letter (<b>tracking</b>). The amount of letter spacing change is defined by the <b>v-text-spacing</b> property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>tightening</b></li> <li>• <b>tracking</b></li> </ul>                                                                                                                                                                                                                                                                                                                                              |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                  |                |                                                                                                   |
| v-text-spacing      | <p>Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                  |                |                                                                                                   |

#### 19.2.2.29 shapelayout (Shape Layout Properties)

This element contains child elements that store information used in the editing and layout of shapes.

| Parent Elements                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------|
| background (Part 1, §17.2.1); hdrShapeDefaults (§14.7.2.1); object (Part 1, §17.3.3.19); pict (§14.2.2.2); pict (§14.5.1); shapeDefaults (§14.7.2.2) |

| Child Elements                        | Subclause  |
|---------------------------------------|------------|
| idmap (Shape ID Map)                  | §19.2.2.14 |
| regrouptable (Shape Grouping History) | §19.2.2.23 |
| rules (Rule Set)                      | §19.2.2.27 |

| Attributes                                  | Description                                                                                                                                                                                                                                                                                                |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ext (VML Extension Handling Behavior)       | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.                                                                                                                                  |
| Namespace:<br>urn:schemas-microsoft-com:vml | [ <i>Rationale</i> : This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i> ]<br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2). |

[*Note*: The W3C XML Schema definition of this element's content model (CT\_ShapeLayout) is located in §A.6.2. *end note*]

### 19.2.2.30 signatureline (Digital Signature Line)

This element specifies a signature line in a document. A signature line provides a visual representation of a signature in a document that is digitally signed. The signature line element indicates that the VML shape in which it appears acts as that visual representation. Typically, the VML shape is an image.

[*Example*:

```
<v:shape ... >
  <v:imagedata ... />
  <o:signatureline v:ext="edit" id="{11979195-DE54-414B-ABD6-5F63607C648B}"
    provid="{00000000-0000-0000-0000-000000000000}" o:suggestedsigner="John Doe"
    o:suggestedsigner2="Manager" o:suggestedsigneremail=johndoe@example.com
    allowcomments="t" issignatureline="t"/>
</v:shape>
```

The signature line in the document might look like this:

9/7/2006

John Doe  
Manager

*end example]*

| Parent Elements                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

end note]

### 19.2.2.31 skew (Skew Transform)

This element specifies a perspective skew effect on a shape. The skew is applied to vector graphics, not image data on the shape in picture fills or image elements. The on attribute shall be true and a permitted value assigned to the matrix attribute.

| Parent Elements                                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes                                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ext (VML Extension Handling Behavior)<br><br>Namespace:<br>urn:schemas-microsoft-com:VML | Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.<br><br>[ <i>Rationale:</i> This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. <i>end rationale</i> ]<br><br>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2). |
| id (Skew ID)                                                                             | Specifies a name that provides a unique identifier for a skew. Default is no value.<br><br>The possible values for this attribute are defined by the W3C XML Schema string datatype.                                                                                                                                                                                                                                                                                                       |
| matrix (Skew Perspective Matrix)                                                         | Specifies a perspective transform of a skew. Default is "1,0,0,1,0,0".<br><br>The matrix is given in the form " $s_{xx}, s_{xy}, s_{yx}, s_{yy}, p_x, p_y$ " where $s$ = scale and $p$ = perspective. If the offset attribute is in absolute units then $p_x, p_y$ are in 1/EMU units; otherwise they are an inverse fraction of the shape size.<br><br>The possible values for this attribute are defined by the W3C XML Schema string datatype.                                          |
| offset (Skew Offset)                                                                     | Specifies the amount of x,y offset from the shape's location. Default is "2pt,2pt". Positive values are measured from the upper left of the face of the shape.<br><br>Values are specified as either an absolute measurement or a fractional value of the shape's dimensions (−0.5 to +0.5).<br><br>The possible values for this attribute are defined by the W3C XML Schema string datatype.                                                                                              |
| on (Skew Toggle)                                                                         | Specifies whether a skew is displayed. Default is false.<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                                                                                                                                                                                                                                                                            |
| origin (Skew Origin)                                                                     | Specifies the origin of the skew. Default is "0,0".<br><br>Values are typically a percentage of the shape's size and range from -0.5 to +0.5. Larger values are allowed that give offsets as multiples of the shape's size.                                                                                                                                                                                                                                                                |

| Attributes | Description                                                                               |
|------------|-------------------------------------------------------------------------------------------|
|            | The possible values for this attribute are defined by the W3C XML Schema string datatype. |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Skew](#)) is located in §A.6.2. *end note*]

### 19.2.2.32 top (Text Box Top Stroke)

This element specifies the stroke properties for the top border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown.

[Example: The text box borders are set independently. Note that the bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

*end example]*

| color (Stroke Color)                    | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[Example: The shape stroke is blue:</p> <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| color2 (Stroke Alternate Pattern Color) | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[Example: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre> <div data-bbox="414 1608 594 1770">  </div> <p>, where myimage.gif is: </p> <p><i>end example]</i></p> |

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                 | The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

| miterlimit (Miter Joint Limit) | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p> <p>[Example:</p> <pre>&lt;v:stroke joinstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p>  |
| on (Stroke Toggle)             | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| opacity (Stroke Opacity)       | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   | <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                  |
| src (Stroke Image Location)       | <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                  |
| startarrow (Line Start Arrowhead) | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>  <p>end example]</p> |

| Attributes                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>startarrowlength<br/>(Line Start Arrowhead Length)</p> | <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p> <p>Specifies the length of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowlength="long" ... /&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p> |
| <p>startarrowwidth<br/>(Line Start Arrowhead Width)</p>   | <p>Specifies the width of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• narrow</li> <li>• medium</li> <li>• wide</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p>                                                                                                              |
| <p>title (Stroke Title)</p>                               | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <pre>&lt;v:fill ... o:title="alt text" ... &gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                         |

| Attributes             | Description                                                                                                                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                        | <p><code>&lt;/v:fill&gt;</code></p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                      |
| weight (Stroke Weight) | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's <code>strokeWeight</code> attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (`CT_StrokeChild`) is located in §A.6.2. *end note]*

### 19.2.3 Simple Types

The following additional simple type information in the `urn:schemas-microsoft-com:office:office` namespace is used for documents of a transitional conformance class.

#### 19.2.3.1 `ST_AlternateMathContentType` (Alternate Math Content Type)

This simple type specifies the content type of the XML markup stored within the `equationxml` element.

The following values are reserved:

| Value                          | Meaning                                                                                                 |
|--------------------------------|---------------------------------------------------------------------------------------------------------|
| <code>officeopenxmlmath</code> | Specifies that the data has been stored using the Office Open XML Math syntax defined in Part 1, §22.1. |
| <code>mathml</code>            | Specifies that the data has been stored using the MathML syntax.                                        |

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Referenced By                                     |
|---------------------------------------------------|
| <code>equationxml@contentType</code> (§19.2.2.10) |

[Note: The W3C XML Schema definition of this simple type's content model (`ST_AlternateMathContentType`) is located in §A.6.2. *end note]*

#### 19.2.3.2 `ST_Angle` (Callout Angles)

This simple type specifies values for the `angle` attribute of the `callout` element (§19.2.2.2).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value      | Description                                   |
|------------------------|-----------------------------------------------|
| 30 (30 degrees)        | 30 degrees.                                   |
| 45 (45 degrees)        | 45 degrees.                                   |
| 60 (60 degrees)        | 60 degrees.                                   |
| 90 (90 degrees)        | 90 degrees.                                   |
| any (Any Angle)        | Unconstrained angle.                          |
| auto (Automatic Angle) | The application chooses an appropriate angle. |

| Referenced By             |
|---------------------------|
| callout@angle (§19.2.2.2) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_Angle) is located in §A.6.2. *end note*]

### 19.2.3.3 ST\_BWMode (Black And White Modes)

This simple type specifies the ways in which a shape renders in a black and white context.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                                    | Description                                                                        |
|------------------------------------------------------|------------------------------------------------------------------------------------|
| auto (Automatic)                                     | Use the bwpure or bwnormal attributes based on the type of output being generated. |
| black (Black)                                        | Use black only.                                                                    |
| blackTextAndLines (Black Text And Lines)             | Use shades of gray, except for text and lines, which are black.                    |
| color (Color)                                        | Do not use grayscale or black and white.                                           |
| grayOutline (Gray Outlines)                          | Use gray and white only.                                                           |
| grayScale (Grayscale)                                | Use shades of gray only.                                                           |
| hide (Hide Object When Displayed in Black and White) | Do not display the object when rendering in only black and white.                  |
| highContrast (Black And White)                       | Use black and white only, no grays.                                                |
| inverseGray (Inverse Grayscale)                      | Use shades of gray only, but invert light and dark grays.                          |
| lightGrayscale (Light grayscale)                     | Use light shades of gray only.                                                     |
| undrawn (Do Not Show)                                | Do not show the object.                                                            |
| white (White)                                        | Use white only.                                                                    |

| Referenced By                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc@bwmode (§19.1.2.1); arc@bwnormal (§19.1.2.1); arc@bwpure (§19.1.2.1); background@bwmode (§19.1.2.2); background@bwnormal (§19.1.2.2); background@bwpure (§19.1.2.2); curve@bwmode (§19.1.2.3); curve@bwnormal (§19.1.2.3); curve@bwpure (§19.1.2.3); image@bwmode (§19.1.2.10); image@bwnormal (§19.1.2.10); image@bwpure (§19.1.2.10); line@bwmode (§19.1.2.12); line@bwnormal (§19.1.2.12); line@bwpure (§19.1.2.12); oval@bwmode (§19.1.2.13); oval@bwnormal (§19.1.2.13); oval@bwpure (§19.1.2.13); polyline@bwmode (§19.1.2.15); polyline@bwnormal (§19.1.2.15); polyline@bwpure (§19.1.2.15); rect@bwmode (§19.1.2.16); rect@bwnormal (§19.1.2.16); rect@bwpure (§19.1.2.16); roundrect@bwmode (§19.1.2.17); roundrect@bwnormal (§19.1.2.17); roundrect@bwpure (§19.1.2.17); shape@bwmode (§19.1.2.19); shape@bwnormal (§19.1.2.19); shape@bwpure (§19.1.2.19); shapetype@bwmode (§19.1.2.20); shapetype@bwnormal (§19.1.2.20); shapetype@bwpure (§19.1.2.20) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_BWMode) is located in §A.6.2. *end note*]

#### 19.2.3.4 ST\_CalloutDrop (Callout Drop Location)

This simple type specifies location values for the drop attribute of the callout element (§19.2.2.2).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Referenced By            |
|--------------------------|
| callout@drop (§19.2.2.2) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_CalloutDrop) is located in §A.6.2. *end note*]

#### 19.2.3.5 ST\_CalloutPlacement (Callout Placement)

This type defines location values used by the drop attribute of the callout element (§19.2.2.2).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value             | Description                   |
|-------------------------------|-------------------------------|
| bottom (Bottom placement)     | Bottom of the shape.          |
| center (Center placement)     | Vertical center of the shape. |
| top (Top placement)           | Top of the shape.             |
| user (User-defined placement) | User-defined placement.       |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_CalloutPlacement](#)) is located in §A.6.2. end note]

### 19.2.3.6 ST\_ColorMode (Extrusion Color Types)

This simple type specifies ways that the extrusion color is defined.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value           | Description                                                                           |
|-----------------------------|---------------------------------------------------------------------------------------|
| auto (Use Shape Fill Color) | Specifies that the color of the extrusion is the same as the fill color of the shape. |
| custom (Use Custom Color)   | Specifies that the extrusion is the color of the color attribute.                     |

| Referenced By                    |
|----------------------------------|
| extrusion@colormode (§19.2.2.11) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ColorMode](#)) is located in §A.6.2. end note]

### 19.2.3.7 ST\_ConnectorType (Connector Type)

This simple type specifies types of connectors.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value             | Description                |
|-------------------------------|----------------------------|
| curved (Curved Connector)     | A curved connector.        |
| elbow (Elbow Connector)       | An elbow-shaped connector. |
| none (No Connector)           | No connector.              |
| straight (Straight Connector) | A straight connector.      |

| Referenced By                                                                                                                                                                                                                                                                                                                                          |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ConnectorType](#)) is located in §A.6.2. end note]

### 19.2.3.8 ST\_ConnectType (Connection Locations Type)

This simple type specifies types of connection locations.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                 | Description                                                                                                                           |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| custom (Custom Connections)       | A custom array of connection locations.                                                                                               |
| none (No)                         | No connection locations.                                                                                                              |
| rect (Four Connections)           | Standard four connection points at midpoints of top, bottom, left, and right sides.                                                   |
| segments (Edit Point Connections) | The edit points of the shape are used. Edit points are the black dots in a graphical editor that are used to select parts of a shape. |

| Referenced By                 |
|-------------------------------|
| path@connecttype (§19.1.2.14) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ConnectType](#)) is located in §A.6.2. end note]

### 19.2.3.9 ST\_ContentType (Content Type)

This simple type specifies a content type.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Referenced By                |
|------------------------------|
| ink@contentType (§19.2.2.15) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ContentType](#)) is located in §A.6.2. end note]

### 19.2.3.10 ST\_DiagramLayout (Diagram Layout Type)

This simple type specifies the style of automatic layout to apply to a node in a diagram.

This simple type's contents are a restriction of the W3C XML Schema integer datatype.

| Enumeration Value     | Description                |
|-----------------------|----------------------------|
| 0 (Top-down Centered) | Top-down, centered layout. |

| Enumeration Value      | Description                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------|
|                        |                                 |
| 1 (Hanging Both Sides) | Hanging, both sides layout.<br> |
| 2 (Hanging Right Side) | Hanging, right side layout.<br> |
| 3 (Hanging Left Side)  | Hanging, left side layout.<br>  |

| Referenced By                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc@dgmlayout (§19.1.2.1); arc@dgmlayoutmru (§19.1.2.1); curve@dgmlayout (§19.1.2.3);<br>curve@dgmlayoutmru (§19.1.2.3); group@dgmlayout (§19.1.2.7); group@dgmlayoutmru (§19.1.2.7);<br>image@dgmlayout (§19.1.2.10); image@dgmlayoutmru (§19.1.2.10); line@dgmlayout (§19.1.2.12);<br>line@dgmlayoutmru (§19.1.2.12); oval@dgmlayout (§19.1.2.13); oval@dgmlayoutmru (§19.1.2.13);<br>polyline@dgmlayout (§19.1.2.15); polyline@dgmlayoutmru (§19.1.2.15); rect@dgmlayout (§19.1.2.16);<br>rect@dgmlayoutmru (§19.1.2.16); roundrect@dgmlayout (§19.1.2.17); roundrect@dgmlayoutmru<br>(§19.1.2.17); shape@dgmlayout (§19.1.2.19); shape@dgmlayoutmru (§19.1.2.19); shapetype@dgmlayout<br>(§19.1.2.20); shapetype@dgmlayoutmru (§19.1.2.20) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_DiagramLayout](#)) is located in §A.6.2. end note]

#### 19.2.3.11 [ST\\_ExtrusionPlane](#) (Extrusion Planes)

This simple type specifies three axis-aligned planes.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description   |
|-------------------|---------------|
| XY (XY Plane)     | The xy plane. |
| YZ (YZ Plane)     | The yz plane. |
| ZX (ZX Plane)     | The zx plane. |

| Referenced By                |
|------------------------------|
| extrusion@plane (§19.2.2.11) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ExtrusionPlane](#)) is located in §A.6.2. *end note*]

### 19.2.3.12 ST\_ExtrusionRender (Extrusion Rendering Types)

This simple type specifies different rendering modes.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value            | Description                                                   |
|------------------------------|---------------------------------------------------------------|
| boundingCube (Bounding Cube) | Rendering displays the bounding cube that contains the shape. |
| solid (Solid)                | Rendering displays a solid shape.                             |
| wireFrame (Wireframe)        | Rendering displays a wireframe shape.                         |

| Referenced By                 |
|-------------------------------|
| extrusion@render (§19.2.2.11) |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ExtrusionRender](#)) is located in §A.6.2. *end note*]

### 19.2.3.13 ST\_ExtrusionType (Extrusion Type)

This simple type specifies types of extrusions.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                    | Description                                                                                                         |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| parallel (Parallel Projection)       | Extrusion is rendered so that the center of projection is infinitely far away; the extrusion lines do not converge. |
| perspective (Perspective Projection) | Extrusion is rendered to a center of projection, which is the same as the vanishing point for unrotated objects.    |

| Referenced By               |
|-----------------------------|
| extrusion@type (§19.2.2.11) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_ExtrusionType) is located in §A.6.2. *end note*]

#### 19.2.3.14 ST\_FillType (Shape Fill Type)

This simple type specifies the types for fills applied to a shape.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                         | Description                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| background (Use Background Fill)          | Use the fill properties of the background of the object on which the shape exists, such as the page.                                                                                                                                                                                                                                                       |
| frame (Stretch Image to Fit)              | The image is stretched to fill the shape.<br>                                                                                                                                                                                                                             |
| gradient (Linear Gradient)                | The fill colors blend together in a linear gradient from bottom to top.<br>                                                                                                                                                                                             |
| gradientCenter (Centered Radial Gradient) | This indicates that the gradient runs across the center of the shape for a gradient that is defined as gradientRadial in the parent fill element (§19.1.2.5) that is defined in the VML namespace.                                                                                                                                                         |
| gradientRadial (Radial Gradient)          | The fill colors blend together in a radial gradient.<br>                                                                                                                                                                                                                |
| gradientUnscaled (Unscaled Gradient)      | The gradient angle is not scaled relative to the aspect ratio of the shape.<br><br>[Example: The shapes below are twice as wide as they are tall. The first shape uses an unscaled gradient and the second uses a regular scaled gradient:<br><br><i>end example</i> ] |

| Enumeration Value       | Description                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| pattern (Image Pattern) | The image is used to create a pattern using the fill colors.<br> |
| solid (Solid Fill)      | The fill pattern is a solid color.<br>                           |
| tile (Tiled Image)      | The fill image is tiled.<br>                                     |

| Referenced By          |
|------------------------|
| fill@type (§19.2.2.13) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_FillType) is located in §A.6.2. *end note*]

#### 19.2.3.15 ST\_How (Alignment Type)

This simple type specifies types of alignment.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description                  |
|---------------------------|------------------------------|
| bottom (Bottom Alignment) | Bottom vertical alignment.   |
| center (Center Alignment) | Center horizontal alignment. |
| left (Left Alignment)     | Left horizontal alignment.   |
| middle (Middle Alignment) | Middle vertical alignment.   |
| right (Right Alignment)   | Right horizontal alignment.  |
| top (Top Alignment)       | Top vertical alignment.      |

| Referenced By      |
|--------------------|
| r@how (§19.2.2.22) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_How) is located in §A.6.2. *end note*]

### 19.2.3.16 ST\_HrAlign (Alignment Type)

This simple type specifies alignments for horizontal rules.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description     |
|---------------------------|-----------------|
| center (Center Alignment) | Center aligned. |
| left (Left Alignment)     | Left aligned.   |
| right (Right Alignment)   | Right aligned.  |

| Referenced By                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc@hralign (§19.1.2.1); curve@hralign (§19.1.2.3); group@hralign (§19.1.2.7); image@hralign (§19.1.2.10); line@hralign (§19.1.2.12); oval@hralign (§19.1.2.13); polyline@hralign (§19.1.2.15); rect@hralign (§19.1.2.16); roundrect@hralign (§19.1.2.17); shape@hralign (§19.1.2.19); shapetype@hralign (§19.1.2.20) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_HrAlign) is located in §A.6.2. *end note*]

### 19.2.3.17 ST\_InsetMode (Inset Margin Type)

This simple type specifies how inner text margins are obtained.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value        | Description                                           |
|--------------------------|-------------------------------------------------------|
| auto (Automatic Margins) | Inner text margins are calculated by the application. |
| custom (Custom Margins)  | Inner text margins are specified by the shape.        |

| Referenced By                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc@insetmode (§19.1.2.1); curve@insetmode (§19.1.2.3); group@insetmode (§19.1.2.7); image@insetmode (§19.1.2.10); line@insetmode (§19.1.2.12); oval@insetmode (§19.1.2.13); polyline@insetmode (§19.1.2.15); rect@insetmode (§19.1.2.16); roundrect@insetmode (§19.1.2.17); shape@insetmode (§19.1.2.19); shapetype@insetmode (§19.1.2.20); textbox@insetmode (§19.1.2.22) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_InsetMode) is located in §A.6.2. *end note*]

### 19.2.3.18 ST\_OLEDrawAspect ( Embedded Object Representations)

This simple type specifies the ways in which embedded objects are displayed in the application.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value  | Description                                                                                                           |
|--------------------|-----------------------------------------------------------------------------------------------------------------------|
| Content (Snapshot) | The object's presentation is a picture of the contained document (provided by the embedded object server technology). |
| Icon (Icon)        | The object's presentation is an icon.                                                                                 |

| Referenced By                     |
|-----------------------------------|

[Note: The W3C XML Schema definition of this simple type's content model (ST\_OLEDrawAspect) is located in §A.6.2. *end note*]

### 19.2.3.19 ST\_OLELinkType (Embedded Object Alternate Image Request Types)

This simple type specifies the kind of image that shall be requested from the application which hosts embedded object data for a linked object. This simple type allows any image format to be specified; however, the following values are reserved:

| Enumeration Value | Description                                                                                                    |
|-------------------|----------------------------------------------------------------------------------------------------------------|
| Bitmap            | Specifies that a bitmap should be requested.                                                                   |
| EnhancedMetaFile  | Specifies that a metafile (non-raster) image should be requested.                                              |
| Jpeg              | Specifies an image which should use the JPEG format.                                                           |
| Picture           | Specifies that any image format can be requested.<br>[Example: PNG or CGM (ISO/IEC 8632). <i>end example</i> ] |
| Png               | Specifies an image which should use the Portable Network Graphics format.                                      |

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Referenced By         |
|-----------------------|
| LinkType (§19.2.2.17) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_OLELinkType) is located in §A.6.2. *end note*]

### 19.2.3.20 ST\_OLEType ( Embedded Connection Type)

This simple type specifies whether the embedded object is included in the package (that is, embedded) or is stored outside the package (that is, linked).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value       | Description      |
|-------------------------|------------------|
| Embed (Embedded Object) | Embedded object. |
| Link (Linked Object)    | Linked object.   |

| Referenced By               |
|-----------------------------|
| OLEObject@Type (§19.2.2.20) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_OLEType) is located in §A.6.2. *end note*]

### 19.2.3.21 ST\_OLEUpdateMode ( Embedded Object Update Method Type)

This simple type specifies how an embedded object is updated.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                  | Description                                                                                                            |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Always (Server Application Update) | The object is updated whenever the server application using the embedded object indicates there is new data available. |
| OnCall (User Update)               | The object is updated when the user chooses to update it.                                                              |

| Referenced By                     |
|-----------------------------------|
| OLEObject@UpdateMode (§19.2.2.20) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_OLEUpdateMode) is located in §A.6.2. *end note*]

### 19.2.3.22 ST\_RType (Rule Type)

This simple type specifies types of rules.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value          | Description     |
|----------------------------|-----------------|
| align (Alignment Rule)     | Alignment rule. |
| arc (Arc Rule)             | Arc rule.       |
| callout (Callout Rule)     | Callout rule.   |
| connector (Connector Rule) | Connector rule. |

| Referenced By       |
|---------------------|
| r@type (§19.2.2.22) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_RType) is located in §A.6.2. *end note*]

### 19.2.3.23 ST\_ScreenSize (Screen Sizes Type)

This simple type specifies screen sizes.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value          | Description      |
|----------------------------|------------------|
| 1024,768 (1024x768 pixels) | 1024x768 pixels. |
| 1152,862 (1152x862 pixels) | 1152x862 pixels. |
| 544,376 (544x376 pixels)   | 544x376 pixels.  |
| 640,480 (640x480 pixels)   | 640x480 pixels.  |
| 720,512 (720x512 pixels)   | 720x512 pixels.  |
| 800,600 (800x600 pixels)   | 800x600 pixels.  |

| Referenced By                           |
|-----------------------------------------|
| background@targetscreensize (§19.1.2.2) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_ScreenSize) is located in §A.6.2. *end note*]

## 19.3 VML - WordprocessingML Drawing

Within a WordprocessingML document, it is possible to include graphical VML objects. When these objects are present in a word processing document, it is necessary to include information about the object which is specific to their presence in a word processing document.

[Note: The VML format is a legacy format originally introduced with Office 2000 and is included and fully defined in ISO/IEC 29500 for backwards compatibility reasons. The DrawingML format is a newer and richer format created with the goal of eventually replacing any uses of VML in the Office Open XML formats. VML should be considered a transitional format included in Office Open XML for legacy reasons only and new applications that need a file format for drawings are strongly encouraged to use preferentially DrawingML. *end note*]

The VML WordprocessingML Drawing namespace acts in this capacity, specifying all information necessary to anchor and display VML objects within a word processing document.

All elements defined in this subclause shall only appear in a WordprocessingML document.

[Example: Consider a 5-point star added to a WordprocessingML document, for example:

This object allows surrounding text to wrap around its top and bottom, but not to either side, so this interaction with the surrounding document text (which is specific to a word processing document) is stored in the WordprocessingML Drawing namespace as follows:

```
<v:shape ... >
...
<wd:wrap wd:type="topAndBottom" />
</v:shape>
```

The wrap element specifies how surrounding WordprocessingML document content must wrap around the floating VML object - in this case, by wrapping to its top and bottom extents via the type attribute value of topAndBottom. *end example*

### 19.3.1 Table of Contents

This subclause is informative.

|               |                                        |            |
|---------------|----------------------------------------|------------|
| <b>19.3.2</b> | <b>Elements</b>                        | <b>839</b> |
| 19.3.2.1      | anchorlock (Anchor Location Is Locked) | 839        |
| 19.3.2.2      | borderbottom (Bottom Border)           | 839        |
| 19.3.2.3      | borderleft (Left Border)               | 841        |
| 19.3.2.4      | borderright (Right Border)             | 842        |
| 19.3.2.5      | bordertop (Top Border)                 | 844        |
| 19.3.2.6      | wrap (Text Wrapping)                   | 845        |
| <b>19.3.3</b> | <b>Simple Types</b>                    | <b>847</b> |

|          |                                                    |     |
|----------|----------------------------------------------------|-----|
| 19.3.3.1 | ST_BorderShadow (Border Shadow Type) .....         | 847 |
| 19.3.3.2 | ST_BorderType (Border Type) .....                  | 848 |
| 19.3.3.3 | ST_HorizontalAnchor (Horizontal Anchor Type) ..... | 851 |
| 19.3.3.4 | ST_VerticalAnchor (Vertical Anchor Type) .....     | 852 |
| 19.3.3.5 | ST_WrapSide (Text Wrapping Side).....              | 853 |
| 19.3.3.6 | ST_WrapType (Text Wrapping Type).....              | 853 |

**End of informative text.**

## 19.3.2 Elements

The following elements comprise the contents of the urn:schemas-microsoft-com:office:word namespace:

[*Note*: As the VML format is a format provided for backward compatibility, those VML elements defined in the same urn:schemas-microsoft-com:office:word namespace remain in that namespace as it is already used by millions of documents already using VML. *end note*]

### 19.3.2.1 anchorlock (Anchor Location Is Locked)

This element specifies that the anchor location for this object shall not be modified at runtime when an application edits the contents of this document. [*Guidance*: An application might have automatic behaviors which reposition the anchor for a VML object based on user interaction - for example, moving it from one page to another as needed. This element must tell applications not to perform any such behaviors. *end guidance*]

If this element is omitted, then the anchor shall not be locked for the parent VML object.

[*Example*: Consider a floating VML object which must have its anchor locked at the current location. This setting is specified as follows:

```
<wd:anchorLock/>
```

The anchorLock element's presence specifies that the VML object's current anchor location must not be changed by applications editing this content. *end example*].

| Parent Elements                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); oval (§19.1.2.13); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

[*Note*: The W3C XML Schema definition of this element's content model ([CT\\_AnchorLock](#)) is located in §A.6.3. *end note*]

### 19.3.2.2 borderbottom (Bottom Border)

This element specifies the properties for the bottom border of a VML object.

| Parent Elements                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); oval (§19.1.2.13); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| shadow (Border shadow) | <p>Specifies whether this border should be modified to create the appearance of a shadow.</p> <p>For the right and bottom borders, this is accomplished by duplicating the border below and right of the normal border location. For the left and top borders, this is accomplished by moving the border down and to the right of its original location.</p> <p>If this attribute is omitted, then the border is not given the shadow effect.</p> <p>[Example: Consider a top border which must appear with a shadow effect, resulting in the following content:</p> <pre>&lt;wd:bordertop wd:shadow="true" ... /&gt;</pre> <p>This element's shadow attribute is true, indicating that the shadow effect must be applied to the border. <i>end example</i></p> <p>The possible values for this attribute are defined by the ST_BorderShadow simple type (§19.3.3.1).</p> |
| type (Border Style)    | <p>Specifies the style of border used on this object.</p> <p>See the simple type definition for a description of each border style.</p> <p>[Example: Consider a left border resulting in the following WordprocessingML:</p> <pre>&lt;wd:borderleft wd:type="single" .../&gt;</pre> <p>This border's type is single, indicating that the border style is a single line. <i>end example</i></p> <p>The possible values for this attribute are defined by the ST_BorderType simple type (§19.3.3.2).</p>                                                                                                                                                                                                                                                                                                                                                                    |
| width (Border Width)   | <p>Specifies the width of the current border.</p> <p>The width of this border is specified in measurements of eighths of a point, with a minimum value of two (one-fourth of a point) and a maximum value of 96 (twelve points). Any values outside this range can be reassigned to a more appropriate value.</p> <p>[Example: Consider a document with a three point wide dashed line border on all sides, resulting in the following WordprocessingML markup:</p> <pre>&lt;wd:bordertop wd:type="dashed" wd:width="24" .../&gt;</pre>                                                                                                                                                                                                                                                                                                                                   |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <pre>&lt;wd:borderleft wd:type="dashed" wd:width="24" .../&gt; &lt;wd:borderbottom wd:type="dashed" wd:width="24" .../&gt; &lt;wd:borderright wd:type="dashed" wd:width="24" .../&gt;</pre> <p>The width attribute specifies the size in eighths of a point (24 eighths of a point = 3 points). <i>end example</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema <code>positiveInteger</code> datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (`CT_Border`) is located in §A.6.3. *end note*]

### 19.3.2.3 `borderleft` (Left Border)

This element represents the properties for the left border of a VML object.

| Parent Elements                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| shadow (Border shadow) | <p>Specifies whether this border should be modified to create the appearance of a shadow.</p> <p>For the right and bottom borders, this is accomplished by duplicating the border below and right of the normal border location. For the left and top borders, this is accomplished by moving the border down and to the right of its original location.</p> <p>If this attribute is omitted, then the border is not given the shadow effect.</p> <p>[Example: Consider a top border which must appear with a shadow effect, resulting in the following content:</p> <pre>&lt;wd:bordertop wd:shadow="true" ... /&gt;</pre> <p>This element's shadow attribute is true, indicating that the shadow effect must be applied to the border. <i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_BorderShadow simple type (§19.3.3.1).</p> |
| type (Border Style)    | <p>Specifies the style of border used on this object.</p> <p>See the simple type definition for a description of each border style.</p> <p>[Example: Consider a left border resulting in the following WordprocessingML:</p> <pre>&lt;wd:borderleft wd:type="single" .../&gt;</pre> <p>This border's type is single, indicating that the border style is a single line. <i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_BorderType simple type</p>                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | (§19.3.3.2).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| width (Border Width) | <p>Specifies the width of the current border.</p> <p>The width of this border is specified in measurements of eighths of a point, with a minimum value of two (one-fourth of a point) and a maximum value of 96 (twelve points). Any values outside this range can be reassigned to a more appropriate value.</p> <p>[<i>Example:</i> Consider a document with a three point wide dashed line border on all sides, resulting in the following WordprocessingML markup:</p> <pre>&lt;wd:bordertop wd:type="dashed" wd:width="24" .../&gt; &lt;wd:borderleft wd:type="dashed" wd:width="24" .../&gt; &lt;wd:borderbottom wd:type="dashed" wd:width="24" .../&gt; &lt;wd:borderright wd:type="dashed" wd:width="24" .../&gt;</pre> <p>The width attribute specifies the size in eighths of a point (24 eighths of a point = 3 points). <i>end example</i>]</p> <p>The possible values for this attribute are defined by the W3C XML Schema <code>positiveInteger</code> datatype.</p> |

[*Note:* The W3C XML Schema definition of this element's content model (`CT_Border`) is located in §A.6.3. *end note*]

### 19.3.2.6 wrap (Text Wrapping)

This element specifies the type of text wrapping which should be allowed around the contents of this VML object.

If this element is omitted, then no text wrapping shall be performed (i.e. the object shall be presented in line with text).

[*Example:* Consider the following VML object:

```
<v:shape ... >
...
  <wd:wrap wd:type="square" />
</v:shape>
```

The wrap element specifies how surrounding WordprocessingML document content must wrap around the floating VML object - in this case, by wrapping around its extents in a square via the type attribute value of square. *end example*].

| Parent Elements                                                                                                                                                                                                               |

|                             | <p>page. <i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_VerticalAnchor simple type (§19.3.3.4).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <p>side (Wrapping side)</p> | <p>Specifies how text shall wrap around the object's left and right sides.</p> <p>[<i>Example</i>: Consider a floating DrawingML object which must allow text to wrap around its left side only. This setting is specified as follows:</p> <pre>&lt;wd:wrap side="left" ... /&gt;</pre> <p>The side attribute value of left specifies that text must only wrap around the left side of the object. <i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_WrapSide simple type (§19.3.3.5).</p>                                                                                                   |
| <p>type (Wrapping type)</p> | <p>Specifies the type of wrapping - see the simple type definition for a description of each type.</p> <p>[<i>Example</i>: Consider the following VML object:</p> <pre>&lt;v:shape ... &gt; ... &lt;wd:wrap wd:type="topAndBottom" /&gt; &lt;/v:shape&gt;</pre> <p>The wrap element specifies how surrounding WordprocessingML document content must wrap around the floating VML object - in this case, by wrapping around its top and bottom extents via the type attribute value of topAndBottom. <i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_WrapType simple type (§19.3.3.6).</p> |

[*Note*: The W3C XML Schema definition of this element's content model (CT\_Wrap) is located in §A.6.3. *end note*]

### 19.3.3 Simple Types

The following additional simple type information in the urn:schemas-microsoft-com:office:word namespace is used for documents of a transitional conformance class.

#### 19.3.3.1 ST\_BorderShadow (Border Shadow Type)

This simple type specifies logical true and false values.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description    |
|-------------------|----------------|
| f (False)         | Logical false. |
| false (False)     | Logical false. |
| t (True)          | Logical true.  |
| true (True)       | Logical true.  |

| Referenced By                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------|
| borderbottom@shadow (§19.3.2.2); borderleft@shadow (§19.3.2.3); borderright@shadow (§19.3.2.4); bordertop@shadow (§19.3.2.5) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_BorderShadow) is located in §A.6.3. *end note*]

### 19.3.3.2 ST\_BorderType (Border Type)

This type defines which types of borders are supported.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                                                                   | Description                                                                                                                |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| dash (pecifies a line border consisting of a dashed line around the parent object.) | Specifies a line border consisting of a dashed line around the parent object.                                              |
| dashDotDot (Dash Dot Dot Border)                                                    | Specifies a line border consisting of a alternating dotted, dotted, dashed line around the parent object.                  |
| dashDotStroked (Stroked Dash Dot Border)                                            | Specifies a line border consisting of a line with a series of alternating thin and thick strokes around the parent object. |
| dashedSmall (Small Dash Border)                                                     | Specifies a line border consisting of a dashed line with small gaps around the parent object.                              |
| dot (Dotted Border)                                                                 | Specifies a line border consisting of a dotted line around the parent object.                                              |
| dotDash (Dot Dash Border)                                                           | Specifies a line border consisting of a alternating dotted and dashed line around the parent object.                       |
| double (Double Line Border)                                                         | Specifies a line border consisting of a double line around the parent object.                                              |
| doubleWave (Double Wavy Lines Border)                                               | Specifies a line border consisting of a double wavy line around the parent object.                                         |
| hairline (Hairline Border)                                                          | Specifies a line border consisting of a very thin line.                                                                    |
| HTMLInset (Inset Border)                                                            | Specifies a line border consisting of an inset set of lines around the parent object.                                      |

| Enumeration Value                                          | Description                                                                                                                                                                                                           |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                            | <p>[Example:</p>  <p>end example]</p>                                                                                               |
| HTMLOutset (Outset Border)                                 | <p>Specifies a line border consisting of an outset set of lines around the parent object.</p> <p>[Example:</p>  <p>end example]</p> |
| none (No Border)                                           | Specifies that no border shall be applied to the current item.                                                                                                                                                        |
| single (Single Line Border)                                | Specifies a line border consisting of a single line around the parent object.                                                                                                                                         |
| thick (Thick Line Border)                                  | Specifies a line border consisting of a single line around the parent object.                                                                                                                                         |
| thickBetweenThin (Thin-thick-thin Border)                  | Specifies a line border consisting of a thick line contained within a thin line with a medium sized intermediate gap around the parent object.                                                                        |
| thickBetweenThinLarge (Large thin-thick-thin Border)       | Specifies a line border consisting of a thin line contained within a thick line, contained within a thin line with a medium sized intermediate gap around the parent object.                                          |
| thickBetweenThinSmall (Small thin-thick-thin Lines Border) | Specifies a line border consisting of a thin line contained within a thick line, contained within a thin line with a small intermediate gap around the parent object.                                                 |
| thickThin (Thick Thin Line Border)                         | Specifies a line border consisting of a thick line contained within a thin line with a medium sized intermediate gap around the parent object.                                                                        |
| thickThinLarge (Thick Thin Large Gap Border)               | Specifies a line border consisting of a thick line contained within a thin line with a large sized intermediate gap around the parent object.                                                                         |
| thickThinSmall (Small thick-thin lines border)             | Specifies a line border consisting of a thick line contained within a thin line with a small intermediate gap around the parent object.                                                                               |
| thinThick (Thin Thick Line Border)                         | Specifies a line border consisting of a thin line contained within a thick line contained within a thick                                                                                                              |

| Enumeration Value                            | Description                                                                                                                                                                                                                                               |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                              | thin with a medium sized intermediate gap between each around the parent object.                                                                                                                                                                          |
| thinThickLarge (Thin Thick Large Gap Border) | Specifies a line border consisting of a thin line contained within a thick line contained within a thick thin with a large sized intermediate gap between each around the parent object.                                                                  |
| thinThickSmall (Thin Thick Small Gap Border) | Specifies a line border consisting of a thin line contained within a thick line contained within a thick thin with a small intermediate gap between each around the parent object.                                                                        |
| threeDEmboss (3D Embossed Border)            | Specifies a line border consisting of three staged gradient lines around the parent object, getting darker towards the object.<br><br>[Example:<br><br>end example]     |
| threeDEngrave (3D Engraved Border)           | Specifies a line border consisting of three staged gradient lines around the parent object, getting darker away from the object.<br><br>[Example:<br><br>end example] |
| triple (Triple Line Border)                  | Specifies a line border consisting of a triple line around the parent object.                                                                                                                                                                             |
| wave (Wavy Border)                           | Specifies a line border consisting of a wavy line around the parent object.<br><br>[Example:<br><br>end example]                                                      |

| Referenced By                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------|
| borderbottom@type (§19.3.2.2); borderleft@type (§19.3.2.3); borderright@type (§19.3.2.4); bordertop@type (§19.3.2.5) |

[Note: The W3C XML Schema definition of this simple type's content model (ST BorderType) is located in §A.6.3. *end note*]

### 19.3.3.3 ST\_HorizontalAnchor (Horizontal Anchor Type)

This simple type specifies the horizontal position to which the parent object has been anchored in the document. This anchor position shall be used as the base location to determine the final horizontal position of the object in the document.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description                                                                                                                                                                                                                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| char (Character)  | Specifies that the parent object shall be horizontally anchored based on the position of the anchor within the text flow.                                                                                                                                                                                                                  |
| margin (Margin)   | Specifies that the parent object shall be horizontally anchored to the text margins.<br><br>This shall be used to specify that any horizontal positioning values shall be calculated with respect to the location of the text margin.                                                                                                      |
| page (Page)       | Specifies that the parent object shall be horizontally anchored to the page edge.<br><br>This shall be used to specify that any horizontal positioning values shall be calculated with respect to the location of the edge of the page.                                                                                                    |
| text (Text)       | Specifies that the parent object shall be horizontally anchored to the text extents.<br><br>This shall be used to specify that any horizontal positioning values shall be calculated with respect to the location of the edge of the text in the anchor paragraph (including text indentations on that paragraph within the text margins). |

| Referenced By            |

[Note: The W3C XML Schema definition of this simple type's content model (ST HorizontalAnchor) is located in §A.6.3. *end note*]

#### 19.3.3.4 ST\_VerticalAnchor (Vertical Anchor Type)

This simple type specifies the vertical position to which the parent object has been anchored in the document. This anchor position shall be used as the base location to determine the final vertical position of the object in the document.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description                                                                                                                                                                                                                                                                                            |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| line (Line)       | <p>Specifies that the parent object shall be vertically anchored to the line on which its anchor appears.</p> <p>This shall be used to specify that any vertical positioning values shall be calculated with respect to the location of the top edge of the anchor's line in the anchor paragraph.</p> |
| margin (Margin)   | <p>Specifies that the parent object shall be vertically anchored to the text margins.</p> <p>This shall be used to specify that any vertical positioning values shall be calculated with respect to the location of the text margin.</p>                                                               |
| page (Page)       | <p>Specifies that the parent object shall be vertically anchored to the page edge.</p> <p>This shall be used to specify that any vertical positioning values shall be calculated with respect to the location of the edge of the page.</p>                                                             |
| text (Text)       | <p>Specifies that the parent object shall be vertically anchored to the text extents.</p> <p>This shall be used to specify that any vertical positioning values shall be calculated with respect to the location of the top edge of the text in the anchor paragraph.</p>                              |

| Referenced By            |
|--------------------------|
| wrap@anchory (§19.3.2.6) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_VerticalAnchor) is located in §A.6.3. *end note*]

### 19.3.3.5 ST\_WrapSide (Text Wrapping Side)

This simple type defines which sides text can wrap around a VML object.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value      | Description                |
|------------------------|----------------------------|
| both (Both sides)      | Wrap text on both sides.   |
| largest (Largest side) | Wrap text on largest side. |
| left (Left side)       | Wrap text on left side.    |
| right (Right side)     | Wrap text on right side.   |

| Referenced By         |
|-----------------------|
| wrap@side (§19.3.2.6) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_WrapSide) is located in §A.6.3. end note]

### 19.3.3.6 ST\_WrapType (Text Wrapping Type)

This simple type specifies the type of text wrapping which shall be allowed around a VML object within a document.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                      | Description                                                                                                                                                                                 |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| none (No wrapping)                     | Specifies that text shall not be allowed to wrap around the remaining space on each lines around this VML object.                                                                           |
| square (Square wrapping)               | Specifies that text shall be allowed to wrap around the remaining space on each line around this text frame in the document using a rectangle touching each of the object's furthest edges. |
| through (Through wrapping)             | Specifies that text shall be allowed to wrap around the remaining space on each line around this text frame in the document, including any holes in the object.                             |
| tight (Tight wrapping)                 | Specifies that text shall be allowed to tightly wrap around the remaining space on each line around this text frame in the document.                                                        |
| topAndBottom (Top and bottom wrapping) | Specifies that text shall not be allowed to wrap around the remaining space on each lines around the VML object.                                                                            |

| Enumeration Value | Description                                                                                                                          |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------|
|                   | Any text content shall therefore be placed on the next line following the object which does not intersect with the object's extents. |

| Referenced By         |
|-----------------------|
| wrap@type (§19.3.2.6) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_WrapType) is located in §A.6.3. *end note*]

### 19.4 VML - SpreadsheetML Drawing

It is possible to attach user interface controls, such as comments, combo boxes (dropdowns) and embedded controls, to a SpreadsheetML document. VML is used to define certain aspects of the control, such as size and visual appearance. Additional information describing the control shall also be included. The VML SpreadsheetML Drawing namespace provides the additional information necessary to define the object type, settings and behavior for the control.

[Note: The VML format is a legacy format originally introduced with Office 2000 and is included and fully defined in ISO/IEC 29500 for backwards compatibility reasons. The DrawingML format is a newer and richer format created with the goal of eventually replacing any uses of VML in the Office Open XML formats. VML should be considered a transitional format included in Office Open XML for legacy reasons only and new applications that need a file format for drawings are strongly encouraged to use preferentially DrawingML. *end note*]

[Example: Assume the comment below exists on a spreadsheet:

The following defines the additional information necessary to describe the comment. The ObjectType attribute describes the object as a comment. The Anchor element defines that its edges are anchored to the first and fourth rows and the second and fourth columns. The Row and Column elements indicate that it points to the cell in the first row, first column.

```

<x:ClientData ObjectType="Note">
  <x:MoveWithCells/>
  <x:SizeWithCells/>
  <x:Anchor>1, 13, 0, 12, 2, 52, 2, 10</x:Anchor>
  <x:AutoFill>False</x:AutoFill>
  <x:Row>0</x:Row>
  <x:Column>0</x:Column>
  <x:Visible/>
</x:ClientData>

```

This additional comment data exists inside the VML shape that defines the comment object:

```

<v:shape id="_x0000_s1025" type="#_x0000_t202" style='position:absolute;margin
left:57.75pt;margin-top:9pt;width:77.25pt;height:28.5pt;z-index:1;mso-wrap-
style:tight' fillcolor="#ffffe1" o:insetmode="auto">
  <v:fill color2="#ffffe1"/>
  <v:shadow on="t" color="black" obscured="t"/>
  <v:path o:connecttype="none"/>
  <v:textbox style='mso-direction-alt:auto'>
    <div style='text-align:left'></div>
  </v:textbox>
  <x:ClientData ObjectType="Note"> ... </x:ClientData>
</v:shape>

```

*end example]*

## 19.4.1 Table of Contents

This subclause is informative.

|               |                                         |            |
|---------------|-----------------------------------------|------------|
| <b>19.4.2</b> | <b>Elements</b>                         | <b>857</b> |
| 19.4.2.1      | Accel (Primary Keyboard Accelerator)    | 857        |
| 19.4.2.2      | Accel2 (Secondary Keyboard Accelerator) | 857        |
| 19.4.2.3      | Anchor (Anchor)                         | 858        |
| 19.4.2.4      | AutoFill (AutoFill)                     | 859        |

**End of informative text.**

## 19.4.2 Elements

The following elements comprise the contents of the urn:schemas-microsoft-com:office:excel namespace:

[*Note:* As the VML format is a format provided for backward compatibility, those VML elements defined in the same urn:schemas-microsoft-com:office:excel namespace remain in that namespace as it is already used by millions of documents already using VML. *end note*]

### 19.4.2.1 Accel (Primary Keyboard Accelerator)

This element specifies the primary keyboard accelerator for an object. The value is the decimal value of the Unicode character corresponding to the accelerator key. This element is used for buttons, checkboxes, radio buttons and group boxes.

[*Example:* The primary accelerator key is 'A' (65 is the decimal value for 'A' (U+0041))]:

```
<x:ClientData ... >
  <x:Accel>65</x:Accel>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

### 19.4.2.2 Accel2 (Secondary Keyboard Accelerator)

This element specifies the secondary keyboard accelerator for an object. The value is the decimal value of the Unicode character corresponding to the accelerator key. This element is used for buttons, checkboxes, radio buttons and group boxes.

[*Example:* The secondary accelerator key is 'A' (65 is the decimal value for 'A' (U+0041))]:

```
<x:ClientData>
  <x:Accel2>65</x:Accel2>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

### 19.4.2.3 Anchor (Anchor)

This element specifies the anchor location for the object. This is a general-use element.

The value is a comma-separated list of data written out as: LeftColumn, LeftOffset, TopRow, TopOffset, RightColumn, RightOffset, BottomRow, BottomOffset.

| Value        | Description                                                                                                                                                                                  |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LeftColumn   | The left anchor column of the object (left-most column is 0). [ <i>Example:</i> An object whose left anchor was off of the third column has a LeftColumn value of 2. <i>end example</i> ]    |
| LeftOffset   | The offset of the object's left edge from the left edge of the left anchor column. This value is measured in pixels.                                                                         |
| TopRow       | The top anchor row of the object (top-most column is 0). [ <i>Example:</i> An object whose top anchor was off of the fifth row has a TopRow value of 4. <i>end example</i> ]                 |
| TopOffset    | The offset of the object's top edge from the top edge of the top anchor row. This value is measured in pixels.                                                                               |
| RightColumn  | The right anchor column of the object (left-most column is 0). [ <i>Example:</i> An object whose right anchor was off of the tenth column has a RightColumn value of 9. <i>end example</i> ] |
| RightOffset  | The offset of the object's right edge from the left edge of the right anchor column. This value is measured in pixels.                                                                       |
| BottomRow    | The bottom anchor row of the object (top-most column is 0). [ <i>Example:</i> An object whose bottom anchor was off of the tenth row has a BottomRow value of 9. <i>end example</i> ]        |
| BottomOffset | The offset of the object's bottom edge from the bottom edge of the bottom anchor row. This value is measured in pixels.                                                                      |

[*Example:* The left side of the object is 15 pixels to the right of the left edge of the second column. The top edge is 2 pixels below the upper edge of the first row. The right side is 15 pixels to the right of the left edge of the fourth column. The bottom edge is 16 pixels below the top of the fourth row.

```
<x:ClientData>
  <x:Anchor>1, 15, 0, 2, 3, 15, 3, 16</x:Anchor>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.4 AutoFill (AutoFill)

This element specifies that the object's fill properties are automatically provided by the application and are not overridden with a specific fill color or style. [*Rationale*: An application can choose to display objects with certain visual properties that are appropriate to the application environment. *end rationale*] If this element is specified without a value, it is assumed to be true. This is a general-use element.

[*Example*:

```
<x:ClientData> ...
  <x:AutoFill>False</x:AutoFill>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note*: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9. *end note*]

#### 19.4.2.5 AutoLine (AutoLine)

This element specifies that the object's line properties are automatically provided by the application and are not overridden with a specific line color, style, or width. [*Rationale*: An application can choose to display objects with certain visual properties that are appropriate to the application environment. *end rationale*] If this element is specified without a value, it is assumed to be true. This is a general-use element.

[*Example*:

```
<x:ClientData> ...
  <x:AutoLine>False</x:AutoLine>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
*end note]*

19.4.2.6      **AutoPict (Automatically Size)**

This element specifies whether the object's aspect ratio is locked when rendered in different views by the application. If this element is specified without a value, it is assumed to be true. This is a general-use element for objects that use an image representation, denoted by the Pict value of ST\_ObjectType. These objects are: embedded objects, embedded controls, cameras and signature lines.

[Example:

```
<x:ClientData> ...  
  <x:AutoPict>True</x:AutoPict>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
*end note]*

19.4.2.7      **AutoScale (Font AutoScale)**

This element specifies whether the object's font is automatically scaled by the application when the object is resized. If this element is specified without a value, it is assumed to be true. This element is used for attached text. Attached text refers to a class of objects that have text associated with them. The following values defined by the ST\_ObjectType simple type are attached text objects: Button, Checkbox, Dialog, Edit, GBox, Label, Note and Radio.

[Example:

```
<x:ClientData> ...  
  <x:AutoScale>True</x:AutoScale>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element’s content model (ST\_TrueFalseBlank) is located in §A.7.9.  
*end note]*

19.4.2.8 Camera (Camera Tool)

This element specifies that the object is a camera object. A camera object is a shape that is filled with a live view of a cell range in the same spreadsheet, including all applied styles. The cell range is defined by the fmlaPict element (§19.4.2.28), which shall be present. Shape properties such as the position and size of the camera object are defined by the shape. The shape shall be a rectangle. The view of the cell range is scaled vertically and horizontally to fill the rectangle exactly.

If this element is specified without a value, it is assumed to be true.

[*Example:*

```
<x:ClientData> ...  
  <x:FmlaPict>$A$2:$B$4</x:FmlaPict>  
  <x:Camera>True</x:Camera>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9. *end note*]

### 19.4.2.9 Cancel (Cancel Button)

This element specifies that the object is a cancel button. If this element is specified without a value, it is assumed to be true. This element is used for buttons.

[Example:

```
<x:ClientData> ...  
  <x:Cancel/>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the [ST\\_TrueFalseBlank](#) simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9. *end note*]

### 19.4.2.10 CF (Clipboard Format)

This element specifies the clipboard format used to render the object. This is a general-use element for objects that use an image representation, such as embedded objects, embedded controls, cameras and signature lines.

[Example:

```
<x:ClientData> ...  
  <x:CF>Pict</x:CF>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the [ST\\_CF](#) simple type (§19.4.3.1).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_CF](#)) is located in §A.6.4. *end note*]

### 19.4.2.11 Checked (Checked)

This element specifies that the checkbox is checked or the radio button is selected. This element is used for checkboxes and radio buttons. Permitted values are:

| Value | Description            |
|-------|------------------------|
| 0     | Unchecked / unselected |
| 1     | Checked / selected     |
| 2     | Mixed selection        |

[Example:

```
<x:ClientData> ...
  <x:Checked>2</x:Checked>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

### 19.4.2.12 ClientData (Attached Object Data)

This element specifies data associated with objects attached to a spreadsheet. While this element might contain any of the child elements below, only certain combinations are meaningful. The ObjectType attribute determines the kind of object the element represents and which subset of child elements is appropriate. Relevant groups are identified for each child element.

[Example: The following defines additional information for a comment. Its edges are anchored to the first and fourth rows and the second and fourth columns. It points to the cell in the first row, first column.

```
<x:ClientData ObjectType="Note">
  <x:MoveWithCells/>
  <x:SizeWithCells/>
  <x:Anchor>1, 15, 0, 2, 3, 15, 3, 16</x:Anchor>
  <x:AutoFill>False</x:AutoFill>
  <x:Row>0</x:Row>
  <x:Column>0</x:Column>
  <x:Visible/>
</x:ClientData>
```

end example]

[*Example:* The following defines additional information for a radio button. It is the first in a series of radio buttons and selected by default. The accelerator key is 'A' (65 is the decimal value for 'A' (U+0041)) and it is linked to the cell at column A, row 1 of the first sheet.

```
<x:ClientData ObjectType=3D"Radio">
  <x:SizeWithCells/>
  <x:AutoFill>False</x:AutoFill>
  <x:AutoLine>False</x:AutoLine>
  <x:TextVAlign>Center</x:TextVAlign>
  <x:Checked>1</x:Checked>
  <x:Accel>65</x:Accel>
  <x:FmlaLink>Sheet1!$A$1</x:FmlaLink>
  <x:FirstButton/>
</x:ClientData>
```

*end example]*

| Parent Elements                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); oval (§19.1.2.13); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

| Child Elements                          | Subclause  |
|-----------------------------------------|------------|
| Accel (Primary Keyboard Accelerator)    | §19.4.2.1  |
| Accel2 (Secondary Keyboard Accelerator) | §19.4.2.2  |
| Anchor (Anchor)                         | §19.4.2.3  |
| AutoFill (AutoFill)                     | §19.4.2.4  |
| AutoLine (AutoLine)                     | §19.4.2.5  |
| AutoPict (Automatically Size)           | §19.4.2.6  |
| AutoScale (Font AutoScale)              | §19.4.2.7  |
| Camera (Camera Tool)                    | §19.4.2.8  |
| Cancel (Cancel Button)                  | §19.4.2.9  |
| CF (Clipboard Format)                   | §19.4.2.10 |
| Checked (Checked)                       | §19.4.2.11 |
| ColHidden (Comment's Column is Hidden)  | §19.4.2.13 |
| Colored (Dropdown Color Toggle)         | §19.4.2.14 |
| Column (Comment Column Target)          | §19.4.2.15 |
| DDE (Dynamic Data Exchange)             | §19.4.2.16 |
| Default (Default Button)                | §19.4.2.17 |
| DefaultSize (Default Size Toggle)       | §19.4.2.18 |

| Child Elements                           | Subclause  |
|------------------------------------------|------------|
| Disabled (Macro Disable Toggle)          | §19.4.2.19 |
| Dismiss (Dismiss Button)                 | §19.4.2.20 |
| DropLines (Dropdown Maximum Lines)       | §19.4.2.21 |
| DropStyle (Dropdown Style)               | §19.4.2.22 |
| Dx (Scroll Bar Width)                    | §19.4.2.23 |
| FirstButton (First Radio Button)         | §19.4.2.24 |
| FmlaGroup (Linked Formula - Group Box)   | §19.4.2.25 |
| FmlaLink (Linked Formula)                | §19.4.2.26 |
| FmlaMacro (Reference to Custom Function) | §19.4.2.27 |
| FmlaPict (Camera Source Range)           | §19.4.2.28 |
| FmlaRange (List Items Source Range)      | §19.4.2.29 |
| FmlaTxbx (Text Formula)                  | §19.4.2.30 |
| Help (Help Button)                       | §19.4.2.31 |
| Horiz (Scroll Bar Orientation)           | §19.4.2.32 |
| Inc (Scroll Bar Increment)               | §19.4.2.33 |
| JustLastX (Far East Alignment Toggle)    | §19.4.2.34 |
| LCT (Callback Type)                      | §19.4.2.35 |
| ListItem (Non-linked List Item)          | §19.4.2.36 |
| Locked (Lock Toggle)                     | §19.4.2.37 |
| LockText (Text Lock)                     | §19.4.2.38 |
| MapOCX (Embedded Control)                | §19.4.2.39 |
| Max (Scroll Bar Maximum)                 | §19.4.2.40 |
| Min (Scroll Bar Minimum)                 | §19.4.2.41 |
| MoveWithCells (Move with Cells)          | §19.4.2.42 |
| MultiLine (Multi-line)                   | §19.4.2.43 |
| MultiSel (Multiple Selections)           | §19.4.2.44 |
| NoThreeD (Disable 3D)                    | §19.4.2.45 |
| NoThreeD2 (Disable 3D)                   | §19.4.2.46 |
| Page (Scroll Bar Page Increment)         | §19.4.2.47 |
| PrintObject (Print Toggle)               | §19.4.2.48 |
| RecalcAlways (Recalculation Toggle)      | §19.4.2.49 |
| Row (Comment Row Target)                 | §19.4.2.50 |
| RowHidden (Comment's Row is Hidden)      | §19.4.2.51 |
| ScriptExtended (HTML Script Attributes)  | §19.4.2.52 |

| Child Elements                         | Subclause  |
|----------------------------------------|------------|
| ScriptLanguage (HTML Script Language)  | §19.4.2.53 |
| ScriptLocation (HTML Script Location)  | §19.4.2.54 |
| ScriptText (HTML Script Text)          | §19.4.2.55 |
| SecretEdit (Password Edit)             | §19.4.2.56 |
| Sel (Selected Entry)                   | §19.4.2.57 |
| SelType (Selection Type)               | §19.4.2.58 |
| SizeWithCells (Resize with Cells)      | §19.4.2.59 |
| TextHAlign (Horizontal Text Alignment) | §19.4.2.60 |
| TextVAlign (Vertical Text Alignment)   | §19.4.2.61 |
| UIObj (UI Object Toggle)               | §19.4.2.62 |
| Val (Scroll bar position)              | §19.4.2.63 |
| ValidIds (Valid ID)                    | §19.4.2.64 |
| Visible (Comment Visibility Toggle)    | §19.4.2.65 |
| VScroll (Vertical Scroll)              | §19.4.2.66 |
| VTEdit (Validation Type)               | §19.4.2.67 |
| WidthMin (Minimum Width)               | §19.4.2.68 |

| Attributes               | Description                                                                                                                                                                                                                                                                  |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ObjectType (Object type) | <ul style="list-style-type: none"> <li>Specifies the kind of the object. Different sets of child elements are appropriate for different types of objects.</li> </ul> <p>The possible values for this attribute are defined by the ST_ObjectType simple type (§19.4.3.2).</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_ClientData](#)) is located in §A.6.4. *end note*]

#### 19.4.2.13 ColHidden (Comment's Column is Hidden)

This element specifies that the column of the cell to which this comment points is hidden. If this element is specified without a value, it is assumed to be true. This element is used for comments.

[Example:

```
<x:ClientData> ...
  <x:ColHidden>True</x:ColHidden>
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

#### 19.4.2.14 Colored (Dropdown Color Toggle)

This element specifies that the dropdown is colored. If this element is specified without a value, it is assumed to be true. This element is used for dropdowns.

[*Example:*

```
<x:ClientData> ...
  <x:Colored>True</x:Colored>
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

#### 19.4.2.15 Column (Comment Column Target)

This element specifies the column a comment points to. The column index is 0-based. This element is used for comments.

[*Example:*

```
<x:ClientData> ...
  <x:Column>0</x:Column>
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.16 DDE (Dynamic Data Exchange)

This element specifies that the object is a DDE (Dynamic Data Exchange) link. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:DDE>True</x:DDE>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
end note]

#### 19.4.2.17 Default (Default Button)

This element specifies that the object is a default (OK) button. If this element is specified without a value, it is assumed to be true. This element is used for buttons.

[Example:

```
<x:ClientData> ...
  <x:Default>True</x:Default>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
end note]

### 19.4.2.18 DefaultSize (Default Size Toggle)

This element specifies that the object is at its default size. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:DefaultSize>True</x:DefaultSize>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

### 19.4.2.19 Disabled (Macro Disable Toggle)

This element specifies that the object cannot run an attached macro. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:Disabled>True</x:Disabled>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

### 19.4.2.20 Dismiss (Dismiss Button)

This element specifies that the object is a dismiss button. If this element is specified without a value, it is assumed to be true. This element is used for buttons.

[Example:

```
<x:ClientData> ...
  <x:Dismiss>True</x:Dismiss>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.21 DropLines (Dropdown Maximum Lines)

This element specifies the maximum number of lines in the dropdown before scrollbars are added. This element is used for dropdowns.

If this element is omitted, one line is shown.

[Example:

```
<x:ClientData> ...
  <x:DropLines>8</x:DropLines>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.22 DropStyle (Dropdown Style)

This element specifies the style of the dropdown. Allowed values are:

| Value     | Description                                                                           |
|-----------|---------------------------------------------------------------------------------------|
| Combo     | Standard combo box                                                                    |
| ComboEdit | Editable combo box                                                                    |
| Simple    | Standard combo box with only the dropdown button visible when the box is not expanded |

This element is used for dropdowns.

[Example:

```
<x:ClientData> ...
  <x:DropStyle>Combo</x:DropStyle>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.23 Dx (Scroll Bar Width)

This element specifies the width of the scroll bar in screen pixels. This element is used for scroll bars and spinners. [Note: It is possible for other controls, such as combo boxes and list boxes, to use scroll bars and this element is permitted for those controls. end note]

[Example:

```
<x:ClientData> ...
  <x:Dx>16</x:Dx>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.24 FirstButton (First Radio Button)

This element specifies that the object is the first radio button in a set of radio buttons. If this element is specified without a value, it is assumed to be true. This element is used for radio buttons.

[Example:

```
<x:ClientData> ...
  <x:FirstButton>True</x:FirstButton>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element’s content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

**19.4.2.25 FmlaGroup (Linked Formula - Group Box)**

This element specifies the cell the object is linked to, using standard cell reference syntax. This element is used for group boxes. This overrides the FmlaLink for any radio buttons enclosed in the group box. The value in the linked cell and the index of the selected radio button are linked together. The formula syntax is described in Part 1, §18.17 of the SpreadsheetML reference.

[*Example:*

```
<x:ClientData> ...  
  <x:FmlaGroup>$A$1</x:FmlaGroup>  
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

**19.4.2.26 FmlaLink (Linked Formula)**

This element specifies the cell the object is linked to, using standard cell reference syntax. This element is used for checkboxes, radio buttons, scroll bars, spinners, dropdowns and list boxes. The value in the linked cell and the index of the selected item in the object are linked together. This link is ignored if the control allows multiple selections. The formula syntax is described in Part 1, §18.17 of the SpreadsheetML reference.

[*Example:*

```
<x:ClientData> ...  
  <x:FmlaLink>$A$4</x:FmlaLink>  
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.27 FmlaMacro (Reference to Custom Function)

This element specifies the custom function associated with the object. [*Example*: A macro script, add-in function, and so on. *end example*]

This element applies to objects defined by all values of the ST\_ObjectType simple type, except: LineA, Note, RectA.

The format of this string shall be application-defined, and should be ignored if not understood.

[*Example*:

```
<x:ClientData> ...
  <x:FmlaMacro>Button1_Click()</x:FmlaMacro>
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.28 FmlaPict (Camera Source Range)

This element specifies the range of source data cells visible in the camera object (§19.4.2.8). This element is used for cameras. The formula syntax is described in Part 1, §18.17 of the SpreadsheetML reference.

This element is ignored if the Camera element is absent.

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.29 FmlaRange (List Items Source Range)

This element specifies the range of source data cells used to populate the list box, using standard cell reference syntax. This element is used for list boxes. The formula syntax is described in Part 1, §18.17 of the SpreadsheetML reference.

[*Example*:

```
<x:ClientData> ...
  <x:FmlaRange>$A$1:$A$15</x:FmlaRange>
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

19.4.2.30 FmlaTxbx (Text Formula)

This element defines the formula associated with the object's text. This element is used for attached text.

[Example:

```
<x:ClientData> ...  
  <x:FmlaTxbx>$D$9</x:FmlaTxbx>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

19.4.2.31 Help (Help Button)

This element specifies that the object is a help button. If this element is specified without a value, it is assumed to be true. This element is used for buttons.

[Example:

```
<x:ClientData> ...  
  <x:Help>True</x:Help>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

19.4.2.32 Horiz (Scroll Bar Orientation)

This element specifies that the scroll bar is horizontal. If omitted, the scroll bar is vertical. If this element is specified without a value, it is assumed to be true. This element is used for scroll bars and spinners.

[Example:

```
<x:ClientData> ...
  <x:Horiz>True</x:Horiz>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.33 Inc (Scroll Bar Increment)

This element specifies the number of lines to move the scroll bar on an increment click. If omitted, the increment is 0. This element is used for scroll bars and spinners.

[Example:

```
<x:ClientData> ...
  <x:Inc>1</x:Inc>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.34 JustLastX (Far East Alignment Toggle)

This element specifies that Far East alignment is set for the last line in the text. Typically, justified text in Far East environments leaves the last line unjustified. Specifying this element also justifies the last line. If this element is specified without a value, it is assumed to be true. This element is used for attached text.

[Example:

```
<x:ClientData> ...
  <x:JustLastX>True</x:JustLastX>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element’s content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9. end note]

19.4.2.35 LCT (Callback Type)

This element specifies the kind of list box callback. The application should use the callback to determine how to handle user actions on the list box. The only allowed value is Normal. This element is used for list boxes.

[Example:

```
<x:ClientData> ...  
  <x:LCT>Normal</x:LCT>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

19.4.2.36 ListItem (Non-linked ListItem)

This element specifies a non-linked list item that shall be persisted with the list. This element is used for list boxes. [Rationale: This is a place for applications to store optional information associated with the list box. For example, an item to be shown in the list box that is not linked from another set of data. end rationale]

[Example:

```
<x:ClientData> ...  
  <x:ListItem>TheItem</x:ListItem>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

### 19.4.2.37 Locked (Lock Toggle)

This element specifies that the object is locked when the sheet is protected. If omitted, the object is assumed to be locked. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:Locked>False</x:Locked>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

### 19.4.2.38 LockText (Text Lock)

This element specifies that the object's text is locked. If omitted, the object's text is assumed to be locked. If this element is specified without a value, it is assumed to be true. This element is used for attached text.

[Example:

```
<x:ClientData> ...
  <x:LockText>False</x:LockText>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

### 19.4.2.39 MapOCX (Embedded Control)

This element specifies that the object is an embedded control. If this element is specified without a value, it is assumed to be true. This element is used for all embedded controls.

[Example:

```
<x:ClientData>...
  <x:MapOCX>True</x:MapOCX>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.40 Max (Scroll Bar Maximum)

This element specifies the maximum scroll bar position as the index of the list item just above the item at the top of the view when the control is scrolled all the way down. The list indexes are 1-based. If omitted, the value is assumed to be that which allows the last item to be viewed when the control is scrolled all the way down. This element is used for scroll bars and spinners.

[Example: Item 21 is the first item visible in the list when the object is scrolled all the way down.

```
<x:ClientData> ...
  <x:Max>20</x:Max>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.41 Min (Scroll Bar Minimum)

This element specifies the minimum scroll bar position as the index of the list item just above the item at the top of the view when the control is scrolled all the way up, typically 0. The list indexes are 1-based. If omitted, the value is assumed to be 0. This element is used for scroll bars and spinners.

[Example: The first item in the list is visible when the object is scrolled all the way up:

```
<x:ClientData> ...
  <x:Min>0</x:Min>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.42 MoveWithCells (Move with Cells)

This element specifies that the object moves with its underlying cells. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:MoveWithCells>True</x:MoveWithCells>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
*end note]*

#### 19.4.2.43 MultiLine (Multi-line)

This element specifies that the control is multiline. If this element is specified without a value, it is assumed to be true. This element is used for edit controls.

[Example:

```
<x:ClientData> ...
  <x:Multiline>True</x:Multiline>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

19.4.2.44      **MultiSel (Multiple Selections)**

This element specifies a comma-delimited list of selected items. This element overrides the Sel element (§19.4.2.57). This element is used for list boxes that allow multiple selections. See also the SelType element (§19.4.2.58).

[Example:

```
<x:ClientData> ...  
  <x:MultiSel>3, 5, 6</x:MultiSel>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

19.4.2.45      **NoThreeD (Disable 3D)**

This element specifies that 3D effects are disabled. If this element is specified without a value, it is assumed to be true. This element is used for checkboxes, radio buttons, group boxes and scroll bars.

[Example:

```
<x:ClientData> ...  
  <x>NoThreeD>True</x>NoThreeD>  
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

19.4.2.46      **NoThreeD2 (Disable 3D)**

This element specifies that 3D effects are disabled. If this element is specified without a value, it is assumed to be true. This element is used for dropdowns and list boxes.

[Example:

```
<x:ClientData> ...
  <x:NoThreeD2>True</x:NoThreeD2>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.47 Page (Scroll Bar Page Increment)

This element specifies the number of lines to move the scroll bar on a page click. This element is used for scroll bars and spinners.

[Example:

```
<x:ClientData> ...
  <x:Page>9</x:Page>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.48 PrintObject (Print Toggle)

This element specifies that the object is printed when the document is printed. If omitted, it is assumed the object prints when the document is printed. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:PrintObject>False</x:PrintObject>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element’s content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

19.4.2.49      [RecalcAlways \(Recalculation Toggle\)](#)

This element defines whether the object is always included in recalculation. If this element is specified without a value, it is assumed to be true. This is used by controls that reference cells in the spreadsheet to update themselves when the spreadsheet changes.

[*Example:*

```
<x:ClientData> ...  
  <x:RecalcAlways>True</x:RecalcAlways>  
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element’s content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note*]

19.4.2.50      [Row \(Comment Row Target\)](#)

This element specifies the row a comment points to. The row index is 0-based. This element is used for comments.

[*Example:*

```
<x:ClientData> ...  
  <x:Row>0</x:Row>  
</x:ClientData>
```

*end example*]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.51 RowHidden (Comment's Row is Hidden)

This element specifies that the row of the cell to which this comment points is hidden. If this element is specified without a value, it is assumed to be true. This element is used for comments.

[Example:

```
<x:ClientData> ...
  <x:RowHidden>True</x:RowHidden>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.52 ScriptExtended (HTML Script Attributes)

This element specifies custom extended attributes associated with the HTML script tag. The language and id are not included in the extended attributes. If the document contains no HTML script, this element should be ignored.

[Example: The extended script attribute is " src="file.js"":

```
<x:ClientData> ...
  <x:ScriptExtended>src=&quot;file.js&quot;</x:ScriptExtended>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.53 ScriptLanguage (HTML Script Language)

This element specifies the language of the custom function. If the document contains no HTML script, this element should be ignored. Allowed values are:

| Value | Description  |
|-------|--------------|
| 1     | Java         |
| 2     | Visual Basic |
| 3     | ASP          |
| 4     | Other        |

[Example:

```
<x:ClientData> ...
  <x:ScriptLanguage>1</x:ScriptLanguage>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema nonNegativeInteger datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.54 ScriptLocation (HTML Script Location)

This element specifies the location of the custom function. If the document contains no HTML script, this element should be ignored. Allowed values are:

| Value | Description |
|-------|-------------|
| 1     | Head        |
| 2     | Body        |

[Example:

```
<x:ClientData> ...
  <x:ScriptLocation>2</x:ScriptLocation>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema nonNegativeInteger datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.55 ScriptText (HTML Script Text)

This element specifies the script text (comment) associated with a block of HTML script in the document. If the document contains no HTML script, this element should be ignored.

[Example: The script text reads: "<!-- Comment -->":

```
<x:ClientData> ...
  <x:ScriptText>&lt;!-- Comment -->&gt;</x:ScriptText>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.56 SecretEdit (Password Edit)

This element specifies that the object represents a password edit field. If this element is specified without a value, it is assumed to be true. This element is used for attached text.

[Example:

```
<x:ClientData> ...
  <x:SecretEdit>True</x:SecretEdit>
</x:ClientData>
```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model ([ST\\_TrueFalseBlank](#)) is located in §A.7.9.  
*end note]*

#### 19.4.2.57 Sel (Selected Entry)

This element specifies the index of the selected item. The list indexes are 1-based. If omitted or set to a value of 0, no items are selected. This element is used for list boxes.

[Example:

```

<x:ClientData>...
  <x:Sel>1</x:Sel>
</x:ClientData>

```

*end example]*

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.58 SelType (Selection Type)

This element specifies the kind of selection for the list box. If omitted, the control is assumed to be Single.

Allowed values are:

| Value  | Description                                                                                      |
|--------|--------------------------------------------------------------------------------------------------|
| Single | The listbox shall only have one selected item.                                                   |
| Multi  | The listbox can have multiple items selected by clicking on each item.                           |
| Extend | The listbox can have multiple items selected by holding a control key and clicking on each item. |

This element is used for list boxes.

[Example:

```

<x:ClientData> ...
  <x:SelType>Single</x:SelType>
</x:ClientData>

```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.59 SizeWithCells (Resize with Cells)

This element specifies that the object resizes with its underlying cells. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```

<x:ClientData> ...
  <x:SizeWithCells>True</x:SizeWithCells>
</x:ClientData>

```

*end example]*

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[*Note:* The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
*end note]*

#### 19.4.2.60 TextHAlign (Horizontal Text Alignment)

This element specifies the horizontal text alignment for the object. Permitted values are Left, Justify, Center, Right and Distributed. If omitted, the alignment is assumed to be Left. This element is used for attached text.

[*Example:*

```

<x:ClientData> ...
  <x:TextHAlign>Right</x:TextHAlign>
</x:ClientData>

```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.61 TextVAlign (Vertical Text Alignment)

This element specifies the horizontal text alignment for the object. Permitted values are Top, Justify, Center, Bottom and Distributed. If omitted, the alignment is assumed to be Top. This element is used for attached text.

[*Example:*

```

<x:ClientData> ...
  <x:TextVAlign>Center</x:TextVAlign>
</x:ClientData>

```

*end example]*

The possible values for this element are defined by the W3C XML Schema string datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

19.4.2.62 UIObj (UI Object Toggle)

This element defines whether the object is a UI object. If this element is specified without a value, it is assumed to be true. This is a general-use element.

[Example:

```
<x:ClientData> ...  
  <x:UIObj>True</x:UIObj>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

19.4.2.63 Val (Scroll bar position)

This element specifies the scroll bar position as the index of the list item just above the item at the top of the view, given the current scroll position. The list indexes are 1-based. If omitted, the value is assumed to be 0. This element is used for scroll bars and spinners.

[Example: The first list item (item 1) is just off the top of the view. The second list item is at the top of the view.

```
<x:ClientData> ...  
  <x:Val>1</x:Val>  
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

#### 19.4.2.64 ValidIds (Valid ID)

This element specifies that the ID of a linked object is correct. This is a general-use element.

[Example:

```
<x:ClientData> ...
  <x:ValidIds>True</x:ValidIds>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.65 Visible (Comment Visibility Toggle)

This element specifies that a comment is visible. If omitted, the comment is assumed to be invisible. If this element is specified without a value, it is assumed to be true. This element is used for comments.

[Example:

```
<x:ClientData> ...
  <x:Visible>True</x:Visible>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.66 VScroll (Vertical Scroll)

This element specifies that the object has a vertical scroll. If omitted, a vertical scroll is not used. If this element is specified without a value, it is assumed to be true. This element is used for edit controls.

[Example:

```
<x:ClientData> ...
  <x:VScroll>True</x:VScroll>
</x:ClientData>
```

end example]

The possible values for this element are defined by the ST\_TrueFalseBlank simple type (§20.1.2.6).

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

[Note: The W3C XML Schema definition of this element's content model (ST\_TrueFalseBlank) is located in §A.7.9.  
end note]

#### 19.4.2.67 VTEdit (Validation Type)

This element specifies the kind of semantic validation to use for data input to the control. If omitted, the value is assumed to be Text. Permitted values are:

| Value | Description |
|-------|-------------|
| 0     | Text        |
| 1     | Integer     |
| 2     | Number      |
| 3     | Reference   |
| 4     | Formula     |

This element is used for edit controls.

[Example:

```
<x:ClientData> ...
  <x:VTEdit>True</x:VTEdit>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

### 19.4.2.68 WidthMin (Minimum Width)

This element specifies the smallest width allowed for the dropdown window in screen pixels. This element is used for list boxes and dropdowns.

[Example:

```
<x:ClientData ... > ...
  <x:WidthMin>78</x:WidthMin>
</x:ClientData>
```

end example]

The possible values for this element are defined by the W3C XML Schema integer datatype.

| Parent Elements         |
|-------------------------|
| ClientData (§19.4.2.12) |

## 19.4.3 Simple Types

The following additional simple type information in the urn:schemas-microsoft-com:office:excel namespace is used for documents of a transitional conformance class.

### 19.4.3.1 ST\_CF (Clipboard Format Type)

This simple type specifies the allowed clipboard formats. This simple type allows any image format to be specified; however, the following values are reserved:

| Value      | Description                                                                                                                                                                  |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bitmap     | Bitmap.                                                                                                                                                                      |
| Jpeg       | An image which should use the JPEG format.                                                                                                                                   |
| Pict       | Any picture format. [Example: SVG or JPEG. end example]                                                                                                                      |
| PictOld    | Any picture format, but preferably one that is more likely to be supported by legacy applications.                                                                           |
| PictPrint  | An image rendered using the default printer's settings. This is typically of higher resolution and scaled differently compared to a picture created for on-screen rendering. |
| PictScreen | An image rendered using screen settings. This is typically lower resolution than an image created for printing.                                                              |
| Png        | An image which should use the Portable Network Graphics format.                                                                                                              |

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Referenced By   |
|-----------------|
| CF (§19.4.2.10) |

[Note: The W3C XML Schema definition of this simple type's content model (ST CF) is located in §A.6.4. *end note*]

### 19.4.3.2 ST\_ObjectType (Object Type)

This simple type specifies the objects that a ClientData element can represent.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value          | Description                                        |
|----------------------------|----------------------------------------------------|
| Button (Pushbutton)        | A pushbutton control.                              |
| Checkbox (Checkbox)        | A checkbox control.                                |
| Dialog (Dialog)            | A dialog.                                          |
| Drop (Dropdown Box)        | A dropdown (combo box) control.                    |
| Edit (Editable Text Field) | An editable text field control.                    |
| GBox (Group Box)           | A group box control.                               |
| Group (Group)              | A group of objects, such as a group of checkboxes. |
| Label (Label)              | A label control.                                   |
| LineA (Auditing Line)      | A formula auditing arrow.                          |
| List (List Box)            | A list control.                                    |
| Movie (Movie)              | A movie object in Mac format.                      |
| Note (Comment)             | A comment.                                         |
| Pict (Image)               | A placeholder image.                               |
| Radio (Radio Button)       | A radio button control.                            |
| Rect (Plain Rectangle)     | A rectangle shape that is not a control.           |
| RectA (Auditing Rectangle) | A formula auditing rectangle.                      |
| Scroll (Scroll Bar)        | A scroll bar.                                      |
| Shape (Plain Shape)        | A general shape that is not a control.             |
| Spin (Spin Button)         | A spin button (spinner) control.                   |

| Referenced By                      |
|------------------------------------|
| ClientData@ObjectType (§19.4.2.12) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_ObjectType) is located in §A.6.4. *end note*]

## 19.5 VML - PresentationML Drawing

This section describes additional information attached to VML shapes that is specific to usage with PresentationML.

[Note: The VML format is a legacy format originally introduced with Office 2000 and is included and fully defined in ISO/IEC 29500 for backwards compatibility reasons. The DrawingML format is a newer and richer format created with the goal of eventually replacing any uses of VML in the Office Open XML formats. VML should be considered a transitional format included in Office Open XML for legacy reasons only and new applications that need a file format for drawings are strongly encouraged to use preferentially DrawingML. *end note*]

[Example: Assume the following annotation was drawn on a slide during a presentation and saved into the presentation:

- Bullet point

The red circle annotation is stored as a VML shape that is an ink annotation. For brevity, the specific path and ink data are omitted.

```
<v:shape id="_x0000_s1029" style='position:absolute;left:126pt;
top:327.375pt;width:27.625pt;height:24.75pt' coordorigin="4445,11549"
coordsize="973,874" path="..." filled="f" strokecolor="red"
strokeweight="1.5pt">
  <v:stroke endcap="round"/>
  <v:path shadowok="f" o:extrusionok="f" fillok="f" insetpenok="f"/>
  <o:lock v:ext="edit" rotation="t" aspectratio="t" verticies="t" text="t"
    shapetype="t"/>
  <o:ink i="..." annotation="t"/>
  <pvm1:iscomment/>
</v:shape>
```

*end example*

### 19.5.1 Table of Contents

This subclause is informative.

|                                                |            |
|------------------------------------------------|------------|
| <b>19.5.2 Elements .....</b>                   | <b>894</b> |
| 19.5.2.1 iscomment (Ink Annotation Flag) ..... | 894        |
| 19.5.2.2 textdata (VML Diagram Text) .....     | 894        |

End of informative text.

### 19.5.2 Elements

The following elements comprise the contents of the urn:schemas-microsoft-com:office:powerpoint namespace:

[*Note*: As the VML format is a format provided for backward compatibility, those VML elements defined in the same urn:schemas-microsoft-com:office:powerpoint namespace remain in that namespace as it is already used by millions of documents already using VML. *end note*]

#### 19.5.2.1 iscomment (Ink Annotation Flag)

Specifies that the object was created as an ink annotation. Default is false. If this element is specified without a value, it is assumed to be true. This element is only used with PresentationML. [*Rationale* This allows an application to treat annotation ink objects as any other annotation. For example, if annotations are hidden, the application can hide the ink object. *end rationale*]

[*Example*:

```
<v:shape ... >
  <o:ink ... annotation="true"/>
  <pvm1:iscomment/>
</v:shape>
```

• **Bullet point**

*end example*]

| Parent Elements    |
|--------------------|
| shape (§19.1.2.19) |

[*Note*: The W3C XML Schema definition of this element's content model (CT\_Empty) is located in §A.6.5. *end note*]

#### 19.5.2.2 textdata (VML Diagram Text)

This element specifies optional supplementary text information associated with a legacy VML shape that is a node in a VML diagram when it cannot otherwise be stored within the DrawingML framework.

[*Note*: An application could use this to preserve a specific diagram format for backward compatibility, but it is strongly recommended to upgrade all VML shapes to DrawingML shapes. *end note*]

| Parent Elements                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); oval (§19.1.2.13); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

| Attributes          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id (Text Reference) | <p>Specifies the identifier that is used in conjunction with a corresponding relationship file to resolve the location of the diagram shape text.</p> <p>[Example:</p> <pre data-bbox="454 426 938 562">&lt;v:shape ... o:dgmnodekind="0" &gt;   &lt;v:textbox inset="0,0,0,0"/&gt;   &lt;pvm1:textdata id="rId1"/&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

| 20.1.2.3 ST_ColorType (Color Type)                                       | 898        |
| 20.1.2.4 ST_CryptProv (Cryptographic Provider Types)                     | 899        |
| 20.1.2.5 ST_TrueFalse (Boolean Value)                                    | 900        |
| 20.1.2.6 ST_TrueFalseBlank (Boolean Value with Blank [False] State)      | 903        |
| <b>20.4.1 Changed attribute for sources element (Part 1, §22.6.2.60)</b> | <b>904</b> |

End of informative text.

### 20.1.2 Simple Types

The following additional simple type information in the <http://schemas.openxmlformats.org/officeDocument/2006/sharedTypes> namespace is used for documents of a transitional conformance class.

#### 20.1.2.1 ST\_AlgClass (Cryptographic Algorithm Classes)

This simple type specifies the possible classes of cryptographic algorithm used by protection. [*Note: The initial version of ISO/IEC 29500 only supports a single version - hash - but future versions may expand this as necessary. end note*]

[*Note: Omitting this attribute is logically equivalent to assigning it the value custom. end note*]

[*Example: Consider a WordprocessingML document with the following information stored in one of its protection elements:*

```
<... w:cryptAlgorithmClass="hash"
      w:cryptAlgorithmType="typeAny"
      w:cryptAlgorithmSid="1"
      w:hash="9oN7nWkCAyEZib1RomSJTjmPpCY=" />
```

The cryptAlgorithmClass attribute value of hash specifies that the algorithm used for the password is a hashing algorithm. *end example*]

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description                                                                                                                                        |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| custom (Custom Algorithm) | Specifies that a custom algorithm class, specified within the parent element's algIdExt attribute, generated the hash value.                       |
| hash (Hashing)            | Specifies that the algorithm is a hashing function, which creates a hash value for user-supplied input that is very difficult to reverse-engineer. |

| Referenced By                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| documentProtection@cryptAlgorithmClass (§14.7.2.3); modifyVerifier@cryptAlgorithmClass (§16.2.1.3); writeProtection@cryptAlgorithmClass (§14.7.2.5) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_AlgClass) is located in §A.7.9. *end note*]

### 20.1.2.2 ST\_AlgType (Cryptographic Algorithm Types)

This simple type specifies the possible values for the type of cryptographic algorithm used by protection. [Note: The initial version of ISO/IEC 29500 only supports a single type - typeAny - but future versions may expand this as necessary. *end note*]

[Note: Omitting this attribute is logically equivalent to assigning it the value custom. *end note*]

[Example: Consider a WordprocessingML document with the following information stored in one of its protection elements:

```
<... w:cryptAlgorithmClass="hash"
      w:cryptAlgorithmType="typeAny"
      w:cryptAlgorithmSid="1"
      w:hash="9oN7nWkCAyEZib1RomSJTjmPpCY=" />
```

The cryptAlgorithmType attribute value of typeAny specifies that any type of algorithm may have been used for the password. *end example*

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value             | Description                                                                                                                 |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| custom (Custom Algorithm)     | Specifies that a custom algorithm type, specified within the parent element's algIdExt attribute, generated the hash value. |
| typeAny (Any Predefined Type) | Specifies that one of the predefined cryptographic                                                                          |

| Enumeration Value | Description                                                                                          |
|-------------------|------------------------------------------------------------------------------------------------------|
|                   | algorithms, specified by the parent element's cryptAlgorithmSid attribute, generated the hash value. |

| Referenced By                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------|
| documentProtection@cryptAlgorithmType (§14.7.2.3); modifyVerifier@cryptAlgorithmType (§16.2.1.3); writeProtection@cryptAlgorithmType (§14.7.2.5) |

[Note: The W3C XML Schema definition of this simple type's content model (ST\_AlgType) is located in §A.7.9. *end note*]

20.1.2.3 ST\_ColorType (Color Type)

This simple type specifies a color. Colors are specified in one of three ways: named color, hexadecimal RGB or color palette entry. An optional index can be stored in square brackets following the color and a space. [Rationale: An application might store the color's index in a system color palette using this means. *end rationale*]

A named color is specified using the name of the color. The following named colors are supported:

- Black (#000000) 
- Silver (#C0C0C0) 
- Gray (#808080) 
- White (#FFFFFF) 
- Maroon (#800000) 
- Red (#FF0000) 
- Purple (#800080) 
- Fuchsia (#FF00FF) 
- Green (#008000) 
- Lime (#00FF00) 
- Olive (#808000) 
- Yellow (#FFFF00) 
- Navy (#000080) 
- Blue (#0000FF) 
- Teal (#008080) 
- Aqua (#00FFFF) 

[Example:  
  
    <... color="red" ... >  
  
*end example*]

Hexadecimal RGB is specified using a hash symbol (#) followed by six hexadecimal characters, where each pair represents the red, green and blue component of the color.

[Example:

```
< ... color="#5f2726" ... >
```

end example]

A color palette entry is specified using the name of the color in the palette.

[Example:

```
<... color="buttonFace [67]" ... >
```

end example]

This simple type's contents are a restriction of the W3C XML Schema string datatype.

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ColorType](#)) is located in §A.7.9. end note]

#### 20.1.2.4 ST\_CryptProv (Cryptographic Provider Types)

This simple type specifies the possible types of cryptographic providers which may be used.

[Note: Omitting this attribute is logically equivalent to assigning it the value custom. end note]

[*Example*: Consider a WordprocessingML document with the following information stored in one of its protection elements:

```
<... w:cryptProviderType="rsaAES"
      w:hash="9oN7nWkCAyEZib1RomSJTjmPpCY=" />
```

The cryptProviderType attribute value of rsaAES specifies that the cryptographic provider type shall be an Advanced Encryption Standard provider. *end example*

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value        | Description                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| custom (Custom Provider) | Specifies that a custom algorithm type, specified within the parent element's algIdExt attribute, generated the hash value. |
| rsaAES (AES Provider)    | Specifies that the provider shall support the Advanced Encryption Algorithm standard.                                       |
| rsaFull (Any Provider)   | Specifies that any suitable provider shall be used.                                                                         |

| Referenced By                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------|

[*Note*: The W3C XML Schema definition of this simple type's content model (ST\_CryptProv) is located in §A.7.9. *end note*]

#### 20.1.2.5 ST\_TrueFalse (Boolean Value)

This type specifies logical true and false.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description    |
|-------------------|----------------|
| f (False)         | Logical false. |
| false (False)     | Logical false. |
| t (True)          | Logical true.  |
| true (True)       | Logical true.  |

| Referenced By                                                                                                                                                                                                           |

### 20.1.2.6 ST\_TrueFalseBlank (Boolean Value with Blank [False] State)

This simple type specifies a boolean value with a third state, using a blank attribute, which specifies that the value be false.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value       | Description    |
|-------------------------|----------------|
| (Blank – Logical False) | Logical false. |
| f (Logical False)       | Logical false. |
| false (Logical False)   | Logical false. |
| t (Logical True)        | Logical true.  |
| true (Logical True)     | Logical true.  |

## 20.2 Extended Properties (Part 1, §22.2)

When used in a document of the Transitional conformance class, extended properties are stored within an Extended File Properties part with a source relationship of <http://schemas.openxmlformats.org/officeDocument/2006/relationships/extended-properties>.

## 20.3 Custom Properties (Part 1, §22.3)

When used in a document of the Transitional conformance class, custom properties are stored within a Custom File Properties part with a source relationship of <http://schemas.openxmlformats.org/officeDocument/2006/relationships/custom-properties>.

## 20.4 Changed attributes

The following attributes, which are defined in subclauses within Part 1, §22, “Shared MLs Reference Material”, have different source relationships when used in documents of the Transitional conformance class:

### 20.4.1 Changed attribute for sources element (Part 1, §22.6.2.60)

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## (normative)

### Schemas – W3C XML Schema

This Office Open XML specification includes a family of schemas defined using the W3C XML Schema 1.0 syntax. The normative definitions of these schemas follow below, and they also reside in an accompanying file named OfficeOpenXML-XMLSchema-Transitional.zip, which is distributed in electronic form.

#### A.1 WordprocessingML

This schema is available in the file wml.xsd.

```

1 <xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema"
2   xmlns:m="http://schemas.openxmlformats.org/officeDocument/2006/math"
3   xmlns:r="http://schemas.openxmlformats.org/officeDocument/2006/relationships"
4   xmlns:sl="http://schemas.openxmlformats.org/schemaLibrary/2006/main"
5   xmlns:wp="http://schemas.openxmlformats.org/drawingml/2006/wordprocessingDrawing"
6   xmlns="http://schemas.openxmlformats.org/wordprocessingml/2006/main"
7   xmlns:s="http://schemas.openxmlformats.org/officeDocument/2006/sharedTypes"
8   elementFormDefault="qualified" attributeFormDefault="qualified" blockDefault="#all"
