|                             | <pre>color2="blue" angle="45"&gt; &lt;/v:fill&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| aspect (Image Aspect Ratio) | <p>Specifies how the fill image aspect ratio is preserved. Default is ignore. Allowed values are:</p> <ul style="list-style-type: none"> <li>• ignore - Ignore aspect ratio.</li> <li>• atleast - At least as large as defined by the size attribute.</li> <li>• atmost - No larger than that defined by the size attribute.</li> </ul> <p>In each case, the size attribute is adjusted to preserve the aspect ratio of the image.</p> <p>[<i>Example:</i> The image that makes up the fill is no larger than 20 points by 20 points, limiting the size of the tiles inside the shape.</p> <pre>&lt;v:fill type="tile" aspect="atmost" size="20pt,20pt" src="myimage.gif"&gt; &lt;/v:fill&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ImageAspect simple type (§19.1.3.5).</p> |
| color (Primary Color)       | <p>Specifies the main fill color; functions the same as the fillcolor attribute of the shape element (§19.1.2.19). This attribute overrides the shape's fillcolor. Default is white. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[<i>Example:</i> The shape is blue:</p> <pre>&lt;v:shape ... fillcolor="red" ... &gt; &lt;v:fill color="blue"/&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                  |

| Attributes                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                     | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <p>color2 (Secondary Color)</p>     | <p>Specifies the secondary fill color, used when a fill type is a pattern or a gradient. Default is white. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example: The shape is filled with a horizontal gradient with red at the bottom and blue on top:</p> <pre>&lt;v:fill type="gradient"   color="red" color2="blue"&gt; &lt;/v:fill&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>colors (Intermediate Colors)</p> | <p>Specifies an array of comma-separated percentage-color pairs that define intermediate colors and their positions in a gradient fill. The primary color, specified either by the fillcolor attribute of the shape element (§19.1.2.19) or the color attribute of the fill element (§19.1.2.5), is used at the 0% endpoint. The secondary color, specified by the color2 attribute of the fill element (§19.1.2.5), is used at the 100% endpoint. The numeric values can also be specified in 1/65536ths if a trailing "f" is supplied. [Example: For example, a value of "52429f" represents 52429/65536 or 0.8. <i>end example]</i></p> <p>[Example: The shape is filled with a horizontal gradient colored, from bottom to top, red, yellow, green, blue:</p> <pre>&lt;v:fill type="gradient"   color="red" color2="blue"   colors="30% yellow,70% green"&gt; &lt;/v:fill&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>detectmouseclick<br/>(Detect Mouse Click)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether a mouse click is detected on the fill of a shape.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>focus (Gradient Center)</p>                                                                                 | <p>Specifies the center starting position of a gradient. Values <a href="#">are in the</a> range 100% to -100%. Default is 0.</p> <p>A value of 100% or -100% reverses the direction of the gradient (in effect swapping color and color2). A value of 50% changes the gradient so that color is at both ends and color2 is in the middle. A value of -50% changes the gradient so that color2 is at both ends and color is in the middle.</p> <p>[Example: The shape is filled with a horizontal gradient with red at both ends and blue in the middle:</p> <pre>&lt;v:fill type="gradient"   color="red" color2="blue"   focus="50%"&gt; &lt;/v:fill&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype:</p> |
| <p>focusposition<br/>(Radial Gradient Center)</p>                                                              | <p>Specifies the position of the center rectangle of a radial gradient. The vector is a fraction of the width and height of the shape. The first is a percentage of the fill to the left edge; the second is a percentage of the fill to the top. Default is 0,0. To position a radial fill at the center of a shape, use a value of 50%,50%.</p> <p>[Example: The shape is filled with a rectangular gradient positioned in the top-left quadrant of the shape. The interior of the gradient is blue and the exterior is red:</p> <pre>&lt;v:fill type="gradientradial"   color="red" color2="blue"   focusposition="25%,25%"&gt; &lt;/v:fill&gt;</pre>                                                                                                                                                                                                                         |

| Attributes                                                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| focussize (Radial Gradient Size)                                                             | <p>Specifies the size of the center rectangle of a radial gradient. The vector is a fraction of the width and height of the shape. The first is a percentage of the fill to the right edge; the second is a percentage of the fill to the bottom. Default is 0,0.</p> <p>A focussize value of 100%,100% and a focusposition of 0,0 makes color2 dominate the gradient completely. Small values of around 10%,10% are recommended for balanced gradients.</p> <p>[Example: The shape is filled with a rectangular gradient positioned in the top-left quadrant of the shape. The interior of the gradient is blue and the exterior is red. The red portion is wider on the bottom and right sides of the blue region. The pure blue region is 25% the width and 25% the height of the shape:</p> <pre>&lt;v:fill type="gradientradial"   color="red" color2="blue"   focussize="25%,25%"   focusposition="25%,25%"&gt; &lt;/v:fill&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>href (Hyperlink Target)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies the URL to the original image file. Used only if the picture has been linked and embedded. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:fill ... o:href="myimage.gif" ... &gt; &lt;/v:fill&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

#### 19.1.2.6 formulas (Set of Formulas)

This element defines a set of formulas whose calculated values are referenced by other attributes. Each formula is contained in a child *f* element (§19.1.2.4).

| Parent Elements                                                                                                                                                                                                                                                                                                            |

#### 19.1.2.7 group (Shape Group)

This element is used to collect shapes and groups so they can be positioned and transformed as a single unit. A group contains group, shapetype, shape, pre-defined shape - arc, curve, image, line, oval, polyline, rect, roundrect - and lock elements.

[Example: The following example defines a few basic parts of a flying saucer graphic. The group consists of five shapes. Each shape's position is determined within the coordinate space of the group, which is defined by the group's attributes.

```

<v:group id="saucer"
  style='position:relative;left:200;top:200;width:50;height:50'
  coordorigin="0,0" coordsize="6000,6000">
  <v:shape id="body"

```

```

style='position:relative;left:234.75pt;top:208.875pt;

| <b>coordorigin</b><br>(Coordinate Space Origin) | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the <code>path</code> attribute. Thus a path can be defined against a generic (0,0) origin and the <code>coordorigin</code> value translates the entire path within the shape's bounding space.</p> <p>[<i>Example:</i> The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (<code>coordsize</code>) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>coordsize</b><br>(Coordinate Space Size)     | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (<code>coordsize</code>) and the size of the shape (style width and height). The <code>coordsize</code> attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of <code>coordsize</code> and style width/height effective scales the shape anisotropically.</p> <p>[<i>Example:</i> The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|            | edited         | property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | mso-wrap-style | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | position       | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation       | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top            | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility     | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                        |

|            |                       | horizontally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                                                                                                                                                                                         |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                      |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>• top</li> <li>• middle</li> <li>• bottom</li> <li>• top-center</li> <li>• middle-center</li> <li>• bottom-center</li> <li>• top-baseline</li> <li>• bottom-baseline</li> <li>• top-center-baseline</li> <li>• bottom-center-baseline</li> </ul> |

| Attributes   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |

| Property     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font-family  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font-size    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font-style   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"> <li>• normal</li> <li>• italic</li> <li>• oblique - Treated the same as italic.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font-variant | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"> <li>• normal</li> <li>• small-caps</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                 |                  |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
| font-weight  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table border="1"> <tr> <th data-bbox="677 1404 878 1451">Value</th><th data-bbox="878 1404 1469 1451">Description</th></tr> <tr> <td data-bbox="677 1451 878 1497">normal</td><td data-bbox="878 1451 1469 1497" rowspan="6">Treated as non-bold.</td></tr> <tr> <td data-bbox="677 1497 878 1543">lighter</td></tr> <tr> <td data-bbox="677 1543 878 1589">100</td></tr> <tr> <td data-bbox="677 1589 878 1635">200</td></tr> <tr> <td data-bbox="677 1635 878 1682">300</td></tr> <tr> <td data-bbox="677 1682 878 1728">400</td></tr> <tr> <td data-bbox="677 1728 878 1774">bold</td><td data-bbox="878 1728 1469 1774">Treated as bold.</td></tr> </table>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Value    | Description | normal | Treated as non-bold.                                                                                                                                                                                                                                | lighter     | 100                                                                                                                      | 200       | 300                                                                                                                                                      | 400        | bold                                                                                                                                                                                                                                                                            | Treated as bold. |                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                         |  |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|            |                       | <div><div>bolder</div><div>500</div><div>600</div><div>700</div><div>800</div><div>900</div></div>                                                                                                                                                                                                                      |  |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                     |  |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"><li>none</li><li>underline</li><li>overline</li><li>line-through</li><li>blink</li></ul>                                           |  |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                 |  |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                    |  |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"><li>left</li><li>right</li><li>center</li><li>justify</li><li>letter-justify - Distributes the extra space between the letters.</li><li>stretch-justify - Stretches the letters to fill in the space.</li></ul> |  |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                               |  |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                        |  |

| Attributes                                                                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                              |

| tablelimits (Table Row Height Limits)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies a list of minimum height values for each row in a table. Default is no value.</p> <p>Used by PresentationML for native tables. This attribute is only useful when the table is made up of shapes that are grouped. When text is added to table cells, the row height can increase. The tablelimits attribute stores the original row height so that if text is deleted, the row height does not fall below the original value.</p> <p>[Example:</p>                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                              |

| Attributes                                                                                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |

| wrapcoords (Shape Bounding Polygon) | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to <i>tight</i> or <i>through</i>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_Group) is located in §A.6.1. *end note]*

#### 19.1.2.8 h (Shape Handle)

This element defines a single handle, which is a user interface element tied to one or two adj values. Moving the handle changes its linked adj values, which in turn changes formulas and attributes that depend on them. The handle is optionally constrained vertically or horizontally. The linked adj values store the position of the handle in the shape's coordinate space.

[Example: The example below defines a simple kite shape with a resizable width:

```
<v:shape coordsize="200,200" coordorigin="-100,-100" adj="100"
style="width:50;height:50;position:relative"
path="m @1,-50 l 0,-200 @0,-50 0,200 x e">
<v:formulas>
  <v:f eqn="val #0"/>
  <v:f eqn="sum 0 0 @0"/>
</v:formulas>
<v:handles>
```

```

    <v:h position="#0,0"/>
  </v:handles>
</v:shape>

```

*end example]*

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| invx (Invert Handle's X Position) | <p>Specifies whether the x position of the handle should be inverted according to:<br/> <math>x_{\text{new}} = \text{coordorigin}_x + \text{coordsize}_x - x_{\text{old}}</math></p> <p>Default is false.</p> <p>[Example:</p> <pre>     &lt;v:handles&gt;       &lt;v:h ... invx="true" ... /&gt;     &lt;/v:handles&gt; </pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| invy (Invert Handle's Y Position) | <p>Specifies whether the y position of the handle should be inverted according to:<br/> <math>y_{\text{new}} = \text{coordorigin}_y + \text{coordsize}_y - y_{\text{old}}</math></p> <p>Default is false.</p> <p>[Example:</p> <pre>     &lt;v:handles&gt;       &lt;v:h ... invy="true" ... /&gt;     &lt;/v:handles&gt; </pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| map (Handle Coordinate Mapping)   | <p>Specifies how the x and y positions of the handle are mapped from the coordsize range into the specified range. Default is "0,1000".</p> <p>[Example:</p>                                                                                                                                                                                                                                                                                                       |

| Attributes                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <pre>&lt;v:handles&gt;   &lt;v:h ... map="-1000,1000" ... /&gt; &lt;/v:handles&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| polar (Handle Polar Center) | <p>Specifies the center position of a handle that uses polar coordinates. If specified, the position attribute is assumed to contain radius and angle values. If omitted, the position attribute is assumed to contain x and y positions. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:handles&gt;   &lt;v:h ... polar="0,0" ... /&gt; &lt;/v:handles&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                            |
| position (Handle Position)  | <p>Specifies the x and y position of the handle. If the polar attribute is present, defines the handle position using radius and angle values. Default is "0,0".</p> <p>Each value in the vector is one of the following:</p> <ul style="list-style-type: none"> <li>• constant</li> <li>• formula (e.g., @2)</li> <li>• adj value (e.g., #2)</li> <li>• center</li> <li>• topleft</li> <li>• bottomright</li> </ul> <p>Each of the above except for an adj value reference fixes the handle position for that dimension. Specifying an adj value allows the handle to move in that dimension and the handle position for that dimension is stored in the adj value.</p> <p>[Example: The handle's x position is fixed but it is free to move in the y dimension:</p> <pre>&lt;v:handles&gt;   &lt;v:h ... position="topleft,#2" ... /&gt; &lt;/v:handles&gt;</pre> <p><i>end example]</i></p> |

| Attributes                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                            | The possible values for this attribute are defined by the W3C XML Schema string datatype.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| radiusrange<br>(Handle Polar Radius Range) | <p>Specifies a range of minimum and maximum values that constrain the radius of a handle using polar coordinates. Default is "0,0". Each value is either a constant or a formula reference. Omitting a value leaves that bound unconstrained.</p> <p>[Example: The polar handle can only be moved within a radius range of 25 to 50.</p> <pre>&lt;v:handles&gt;   &lt;v:h ... radiusrange="25,50" ... /&gt; &lt;/v:handles&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| switch (Handle Inversion Toggle)           | <p>Specifies whether the x and y dimensions of the handle are switched when the shape is taller than it is wide. Default is false. This is useful for shapes with limo stretch behavior.</p> <p>[Example:</p> <pre>&lt;v:handles&gt;   &lt;v:h ... switch="true" ... /&gt; &lt;/v:handles&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalseBlank simple type (§20.1.2.6).</p>                                                                                                                       |
| xrange (Handle X Position Range)           | <p>Specifies a range of minimum and maximum values that constrain the x position of a handle. Default is "0,0". Each value is either a constant or a formula reference. Omitting a value leaves that bound unconstrained.</p> <p>[Example: The handle's x position has a maximum bound of 500 and no minimum bound:</p> <pre>&lt;v:handles&gt;   &lt;v:h ... xrange=",500" ... /&gt; &lt;/v:handles&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                        |
| yrange (Handle Y                           | Specifies a range of minimum and maximum values that constrain the y position of a                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Attributes      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Position Range) | <p>handle. Default is "0,0". Each value is either a constant or a formula reference. Omitting a value leaves that bound unconstrained.</p> <p>[<i>Example:</i> The handle's y position has a minimum bound of -500 and no maximum bound:</p> <pre>&lt;v:handles&gt;   &lt;v:h ... yrange="-500," ... /&gt; &lt;/v:handles&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[*Note:* The W3C XML Schema definition of this element's content model (CT H) is located in §A.6.1. *end note]*

#### 19.1.2.9 handles (Set of Handles)

This element defines a set of user interface elements which can vary a shape's adj values. All dependent formulas and attributes are recalculated. Each handle is defined by a child h element.

| Parent Elements                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); background (Part 1, §17.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); object (Part 1, §17.3.3.19); oval (§19.1.2.13); pict (§14.2.2.2); pict (§14.5.1); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

|------------------|-----------|
| h (Shape Handle) | §19.1.2.8 |

[*Note:* The W3C XML Schema definition of this element's content model (CT Handles) is located in §A.6.1. *end note]*

#### 19.1.2.10 image (Image File)

This element is used to draw an image that has been loaded from an external source. There is an implied rectangle that is the same size as the image. Any stroke or fill is applied to this implied rectangle. The stroke is drawn on top of the image. The fill is behind the image and therefore only visible through transparent areas of the image. Image transparency is either encoded in the file or defined via a color value using the chromakey attribute. Unlike the imagedata element (§19.1.2.11), the image element does not have a parent element.

[*Example:*

```
<v:image src="myimage.gif"
  style="position:relative;top:1;left:1;width:50;height:45"
  cropbottom="10%" gamma="0.5" gain="2">
</v:image>
```

*end example]*

| <p>button (Button Behavior Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>        | <p>Specifies whether a shape exhibits button press behavior on click. Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:button="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>bwmode (Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>          | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. end example]</p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| <p>bwnormal (Normal Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies the black-and-white mode for normal black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in a pale grayscale in a normal black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwnormal="lightgrayscale" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p>bwpure (Pure Black-and-White)</p>                                                                        | <p>Specifies the black-and-white mode for pure black-and-white output devices. Default is auto.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Attributes                                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>[Example: This shape renders in high contrast when in a pure black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwpure="highcontrast" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p>                                                                                                                                                                      |
| <p>chromakey (Image Transparency Color)</p>                                | <p>Specifies a color value that is transparent and show anything behind the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:image ... chromakey="white" ...&gt; &lt;/v:image&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                              |
| <p>class (CSS Reference)</p>                                               | <p>Specifies a reference to the definition of a CSS style. Default is no value.</p> <p>[Example: The snippets below are equivalent:</p> <pre>... .narrowstyle {width:50;height:100} ... &lt;v:shape ... class="narrowstyle" style="top:1;left:1"&gt; &lt;/v:shape&gt;</pre> <pre>&lt;v:shape ... style="top:1;left:1; width:50;height:100"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>clip (Clipping Toggle)</p>                                              | <p>Specifies that the clipping region is active. This is used in conjunction with the clippath (§19.2.2.3) element to create a clipping region.</p>                                                                                                                                                                                                                                                                                                                                        |

| Attributes                                                                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                                              | <p>[Example:</p> <pre>&lt;v:shape ... o:clip="true"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                    |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100).</p> |

| Attributes                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                             | <p>The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>coordsize</b><br>(Coordinate Space Size) | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>cropbottom</b> (Image Bottom Crop)       | <p>Specifies the how much to crop the image from the bottom up as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. For example, a value of "52429f" represents 52429/65536 or 0.8.</p> <p>[Example:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to Identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                      |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                   |
| <p>src (Image Source)</p>                                                                   | <p>Specifies the URL of the image to use.</p> <p>[Example:</p> <pre>&lt;v:image ... src="myimage.gif" ...&gt; &lt;/v:image&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                         |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre> |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                   |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre data-bbox="451 751 1063 856">&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre data-bbox="451 1392 987 1465">&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                  |
| style (Shape Styling Properties)   | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available</p>                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|            |                          | <ul style="list-style-type: none"> <li>• text</li> <li>• line</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|            | mso-wrap-distance-bottom | Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                         |
|            | mso-wrap-distance-left   | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                      |
|            | mso-wrap-distance-right  | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-top    | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                            |
|            | mso-wrap-edited          | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-wrap-style           | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                              |
|            | position                 | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the</li> </ul> |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|            |             | normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                     |
|            | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page,</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <p>title (Shape Title)</p>                                                                              | <p>Specifies the text displayed when the mouse pointer moves over the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... title="tooltip" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                       |
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                 |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is</p>                                                                                                                                                                                                                                                                                        |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to <code>tight</code> or <code>through</code>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Image](#)) is located in §A.6.1. end note]

#### 19.1.2.11 imagedata (Image Data)

This element is used to draw an image that has been loaded from an external source. There is an implied rectangle that is the same size as the image. Any stroke or fill is applied to this implied rectangle. The stroke is drawn on top of the image. The fill is behind the image and therefore only visible through transparent areas of the image. Image transparency is either encoded in the file or defined via a color value using the chromakey attribute. Unlike the image element (§19.1.2.10), the imagedata element shall have a parent element.

[Example:

```
<v:shape style="position:relative;top:1;left:1;width:50;height:50"
  path="m 0,0 l 1000,0 1000,1000 0,1000 x e" fillcolor="blue">
  <v:imagedata src="myimage.gif"/>
</v:shape>
```

end example]

| Parent Elements                                                                                                                                                                                                                                                                                                            |

|                                       | <p>[Example:</p> <pre>&lt;v:image ... chromakey="white" ...&gt; &lt;/v:image&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                   |
| <p>cropbottom (Image Bottom Crop)</p> | <p>Specifies the how much to crop the image from the bottom up as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. For example, a value of "52429f" represents 52429/65536 or 0.8.</p> <p>[Example:</p> <pre>&lt;v:image ... cropbottom="10%" ...&gt; &lt;/v:image&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>cropleft (Image Left Crop)</p>     | <p>Specifies how much to crop the image from the left in as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. For example, a value of "52429f" represents 52429/65536 or 0.8.</p> <p>[Example:</p> <pre>&lt;v:image ... cropleft="10%" ...&gt; &lt;/v:image&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>       |
| <p>cropright (Image Right Crop)</p>   | <p>Specifies how much to crop the image from the right in as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. [Example: For example, a value of "52429f" represents 52429/65536 or 0.8.</p>                                                                                                                                                                                                                                                                                         |

| Attributes                                                                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                            | <p><i>end example]</i></p> <p>[Example:</p> <pre>&lt;v:image ... cropright="10%" ...&gt; &lt;/v:image&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                      |
| <p>croptop (Image Top Crop)</p>                                                                            | <p>Specifies how much to crop the image from the top down as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. [Example: For example, a value of "52429f" represents 52429/65536 or 0.8. <i>end example]</i></p> <p>[Example:</p> <pre>&lt;v:image ... croptop="10%" ...&gt; &lt;/v:image&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>detectmouseclick (Detect Mouse Click)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether a mouse click is detected on the fill of a shape.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>embosscolor (Embossed Color)</p>                                                                        | <p>Specifies the color to use to create an embossed effect in the image. Default is no value. This can be set to a percentage of the shadow color to create an embossed picture effect.</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                 |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| gain (Image Intensity)             | <p>Specifies an adjustment for the intensity of all colors. Essentially sets how bright white is. Default is 1.</p> <p>[Example:</p> <pre>&lt;v:image ... gain="0.5" ...&gt; &lt;/v:image&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                  |
| gamma (Image Gamma Correction)     | <p>Specifies the gamma correction. Default is 1.</p> <p>Gamma correction is a factor by which the intended target display gamma differs from the sRGB profile. It can be used to correct for images not prepared for sRGB displays and to adjust overall image contrast. Decreasing it below 1 gives a higher contrast image.</p> <p>[Example:</p> <pre>&lt;v:image ... gamma="0.5" ...&gt; &lt;/v:image&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| grayscale (Image Grayscale Toggle) | <p>Specifies to display the image in grayscale. Default is false.</p> <p>[Example:</p> <pre>&lt;v:image ... gamma="0.5" ...&gt; &lt;/v:image&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                   |

| bwmode (Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office          | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. <i>end example]</i></p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| bwnormal (Normal Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies the black-and-white mode for normal black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in a pale grayscale in a normal black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwnormal="lightgrayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| bwpure (Pure Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-                                | <p>Specifies the black-and-white mode for pure black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in high contrast when in a pure black-and-white environment:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200" coordorigin="-100,-100"</pre> |

| Attributes                                                                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| microsoft-com:office:office        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| strokecolor (Shape Stroke Color)   | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red" stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                         |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                     |

It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul data-bbox="727 1612 1458 1860" style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Attributes | Description   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                        |
|            | margin-left   | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                            |
|            | margin-right  | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|            | margin-top                       | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul>                                                                                                                                                                                                                                                                                                                                                                   |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Attributes | Description                    |                                                                                                                                                                                                                                                                                               |
|------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                | <ul style="list-style-type: none"> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                             |
|            | mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
|            | mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
|            | mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
|            | mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
|            | mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
|            | mso-wrap-edited                | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.</p>                                                                             |
|            | mso-wrap-style                 | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> </ul>                                                             |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <ul style="list-style-type: none"> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | position    | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation    | <p>Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Attributes                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|            |                       | <div>700</div> <div>800</div> <div>900</div>                                                                                                                                                                                                                                                                                        |  |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                                 |  |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"><li>• none</li><li>• underline</li><li>• overline</li><li>• line-through</li><li>• blink</li></ul>                                             |  |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                             |  |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                |  |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"><li>• left</li><li>• right</li><li>• center</li><li>• justify</li><li>• letter-justify - Distributes the extra space between the letters.</li><li>• stretch-justify - Stretches the letters to fill in the space.</li></ul> |  |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                                           |  |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                                    |  |
|            | v-text-spacing-mode   | Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are:                                        |  |

| Attributes                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |

| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                           |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                           |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ... wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Line](#)) is located in §A.6.1. *end note*]

### 19.1.2.13 oval (Oval)

This element draws an oval sized according to the CSS2 style content width and height.

[Example:

```
<v:oval fillcolor="blue"
  style="position:relative;top:1;left:1;width:150;height:50">
</v:oval>
```

*end example*]

| bwmode (Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office   | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. <i>end example]</i></p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> |

| coordorigin<br>(Coordinate Space Origin) | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| coordsize<br>(Coordinate Space Size)     | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Attributes                                                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p>doubleclicknotify<br/>(Double-click Notification Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that an event message is sent when a shape is double-clicked. Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:doubleclicknotify="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>fillcolor (Fill Color)</p>                                                                                                 | <p>Specifies the color to use for the fill. Default is white. If the fill element (§19.1.2.5) is present, its color attribute takes precedence. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example: This shape is red if its fill is visible:</p> <pre>&lt;v:shape ... fillcolor="red" ... &gt; &lt;/v:shape&gt;</pre> <p>This is equivalent to:</p> <pre>&lt;v:shape ... fillcolor="#ff0000" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>filled (Shape Fill Toggle)</p>                                                                                             | <p>Specifies whether the closed path is filled. Default is true. This attribute is overridden by the fill on attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... filled="f" fillcolor="red" ...&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>strokeweight</b><br>(Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                               |
| <b>style</b> (Shape Styling Properties)      | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <table border="1" data-bbox="414 1392 1477 1850"> <thead> <tr> <th data-bbox="414 1392 662 1438">Property</th><th data-bbox="662 1392 1477 1438">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="414 1438 662 1707">flip</td><td data-bbox="662 1438 1477 1707"> <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> </td></tr> <tr> <td data-bbox="414 1707 662 1850">height</td><td data-bbox="662 1707 1477 1850"> <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> </td></tr> </tbody> </table> | Property | Description | flip | <p>Specifies that the orientation of a shape is flipped. Default is no value. |------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                | Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-style | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>square - Wraps text inside the shape in a square.</li> <li>none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|            | position       | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation       | <p>Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | top            | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>auto - Default position of an element in the flow of the page.</li> <li>&lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>&lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility     | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                    |

| Attributes                                                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                                                                                                                                                                                         |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                      |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>• top</li> <li>• middle</li> <li>• bottom</li> <li>• top-center</li> <li>• middle-center</li> <li>• bottom-center</li> <li>• top-baseline</li> <li>• bottom-baseline</li> <li>• top-center-baseline</li> <li>• bottom-center-baseline</li> </ul> |

| Attributes   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |

| Property     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font-family  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font-size    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font-style   | <p>Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• normal</li> <li>• italic</li> <li>• oblique - Treated the same as italic.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font-variant | <p>Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• normal</li> <li>• small-caps</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| font-weight  | <p>Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are:</p> <table border="1"> <tr> <th data-bbox="678 1371 878 1417">Value</th><th data-bbox="878 1371 1474 1417">Description</th></tr> <tr> <td data-bbox="678 1417 878 1459">normal</td><td data-bbox="878 1417 1474 1459" rowspan="6">Treated as non-bold.</td></tr> <tr> <td data-bbox="678 1459 878 1501">lighter</td></tr> <tr> <td data-bbox="678 1501 878 1543">100</td></tr> <tr> <td data-bbox="678 1543 878 1585">200</td></tr> <tr> <td data-bbox="678 1585 878 1627">300</td></tr> <tr> <td data-bbox="678 1627 878 1669">400</td></tr> <tr> <td data-bbox="678 1669 878 1843">bold</td><td data-bbox="878 1669 1474 1843">Treated as bold.</td></tr> </table>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Value    | Description | normal | Treated as non-bold.                                                                                                                                                                                                                                | lighter     | 100                                                                                                                      | 200       | 300                                                                                                                                                      | 400        | bold                                                                                                                                                                                                                                                                                   | Treated as bold. |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
| Value        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |        |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                        |                  |                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |

| Attributes            | Description |                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       |             | <p><b>bolder</b></p> <p>500</p> <p>600</p> <p>700</p> <p>800</p> <p>900</p>                                                                                                                                                                                                                                                                       |
| mso-text-shadow       |             | <p>Specifies whether a shadow is applied to the text on a text path. Default is false.</p>                                                                                                                                                                                                                                                        |
| text-decoration       |             | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul>                                              |
| v-rotate-letters      |             | <p>Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.</p>                                                                                                                                                                                                                                    |
| v-same-letter-heights |             | <p>Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.</p>                                                                                                                                                       |
| v-text-align          |             | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between the letters.</li> <li>• stretch-justify - Stretches the letters to fill in the space.</li> </ul> |
| v-text-kern           |             | <p>Specifies whether kerning is turned on. Default is false.</p>                                                                                                                                                                                                                                                                                  |
| v-text-reverse        |             | <p>Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.</p>                                                                                                                                                                                                                           |

| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                           |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                            | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ... wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_Oval) is located in §A.6.1. *end note]*

#### 19.1.2.14 path (Shape Path)

This element defines the path that makes up the shape. This is done through a string that contains a rich set of pen movement commands. This element also describes the limo-stretch point, inscribed textbox rectangle locations and connection site locations. The limo-stretch definition and the formulas element (§19.1.2.6) allow greater designer control of how the path scales. [Example: They allow, for example, definition of a true rounded corner rectangle where the corners remain circular even though the rectangle is scaled anisotropically. *end example]*

| Parent Elements                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| arc (§19.1.2.1); background (Part 1, §17.2.1); curve (§19.1.2.3); group (§19.1.2.7); image (§19.1.2.10); line (§19.1.2.12); object (Part 1, §17.3.3.19); oval (§19.1.2.13); pict (§14.2.2.2); pict (§14.5.1); polyline (§19.1.2.15); rect (§19.1.2.16); roundrect (§19.1.2.17); shape (§19.1.2.19); shapetype (§19.1.2.20) |

| Attributes                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>arrowok</b><br>(Arrowhead Display Toggle)              | <p>Specifies whether arrowheads are allowed to be displayed. This attribute overrides all other arrowhead attributes in the parent or the stroke element (§19.1.2.21). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape style="width:50;height:50"&gt;   &lt;v:stroke endarrow="block"/&gt;   &lt;v:path arrowok="true"     v="m 0,0 l 1000,0 1000,1000 e"/&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <b>connectangles</b><br>(Connection Point Connect Angles) | <p>Specifies the angle at which curves connect to a shape's connection points. The connection angles are defined by a string consisting of angle values delimited by commas. Default is no value.</p> <p>[Example: Connections are made along the horizontal and vertical axes:</p> <pre>&lt;v:path ... o:connectangles="0,90,180,270" ... &gt; &lt;/v:path&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                  |
| <b>connectlocs</b><br>(Connection Points)                 | <p>Specifies the location of connection points on a path. The connection points are defined by a string consisting of pairs of x and y values, delimited by commas. This is used if connecttype is custom. Default is no value.</p> <p>[Example: Connection points exist at the midpoints of the sides of the square:</p>                                                                                                                                                                                                                                                                                   |

| Attributes                                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                                     | <p>[Example: The shape has no shadow:</p> <pre>&lt;v:shape style="width:50;height:50"&gt;   &lt;v:path v="m 0,0 l 0,1000, 1000,1000, 1000,0 x e"     shadowok="false"/&gt;   &lt;v:shadow on="true"/&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| strokeok (Stroke Toggle)            | <p>Specifies whether a stroke is displayed. This attribute overrides all other stroke attributes in the parent or the stroke element (§19.1.2.21). Default is true.</p> <p>[Example: The shape's red stroke is not shown:</p> <pre>&lt;v:shape style="width:50;height:50"   fillcolor="blue" strokecolor="red"&gt;   &lt;v:path v="m 0,0 l 0,1000, 1000,1000, 1000,0 x e"     strokeok="false"/&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                   |
| textboxrect (Text Box Bounding Box) | <p>Specifies one or more text boxes inside a shape. Default is the same as the geometry's bounding box.</p> <p>A textbox is defined by one or more sets of numbers specifying (in order) the left, top, right, and bottom points of the rectangle. Multiple sets are delimited by a semicolon. The default value is the same dimension value as the containing rectangle. If more than one textbox is defined, the comma-delimited quadruple sets that define each textbox are separated by semicolons. Normally textboxes come in sets of 1, 2, 3, or 6 rectangles on a shape. The textboxrect dimensions clip any text that extends beyond its region.</p> <p>[Example: The textbox is 25% down from the top and the exclamation point is clipped:</p> <pre>&lt;v:shape style="width:60;height:50"&gt;   &lt;v:path v="m 0,0 l 0,1000, 1000,1000, 1000,0 x e"     textboxrect="0,250,850,1000"/&gt;</pre> |

|                               | <p><code>&lt;v:textbox&gt;VML!&lt;/v:textbox&gt;</code><br/> <code>&lt;/v:shape&gt;</code></p> <div data-bbox="415 348 535 449" data-label="Image"> </div> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| textpathok (Text Path Toggle) | <p>Specifies whether a text path is displayed. Default is false.</p> <p>If true, this indicates that the path is an appropriate warping path for the textpath element (§19.1.2.23). Otherwise, the textpath element shall be ignored.</p> <p>[Example: The defined textpath is ignored:</p> <pre> &lt;v:curve from="50,100" to="400,100"   control1="200,200" control2="300,200"&gt;   &lt;v:path textpathok="false"&gt;   &lt;v:textpath on="false" style="font:normal normal     normal 36pt Arial" string="textpath"/&gt; &lt;/v:curve&gt; </pre> <div data-bbox="415 1129 1117 1289" data-label="Image"> </div> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                  |
| v (Path Definition)           | <p>Specifies a string containing the commands that define the shape's path. This value consists of commands followed by zero or more parameters. Default is no value.</p> <p>The following rules apply to path strings:</p> <ul style="list-style-type: none"> <li>Commas or spaces delimit parameters for each command. Both "m 0,0" and "m0 0" are acceptable.</li> <li>A parameter that is omitted using commas is treated as having a value of zero. Thus, "c 10,10,0,0,25,13" and "c 10,10,,,25,13" are equivalent.</li> <li>Parameterized paths are also allowed. In this case, the shape shall also have a formulas element (§19.1.2.6) with a list of formulas that are substituted into the path using the @ symbol followed by the number of the formula. The adj</li> </ul> |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |            |                                                                                                                                                                                      |            |             |   |        |   |                                                     |   |        |    |                                                                                                                                                                 |   |         |    |                                                                                                                                                                  |   |       |   |                                                                                                            |   |     |   |                                                                                                                                                                                      |   |         |    |                                                                                        |   |         |    |                                                                                     |   |          |    |                                                                              |    |        |   |                                                              |

|            | <p>property of the shape contains the input parameters for these formulas. [Example: For example, "moveto @1@4". end example] The evaluations of the formulas are substituted into the appropriate positions. The @ character also serves as a delimiter.</p> <p>The allowed commands are given below. An asterisk (*) indicates that the command is allowed to be repeated. For the qb command, the controlpoint parameter is also allowed to be repeated.</p> <table><tr><th>Command</th><th>Name</th><th>Parameters</th><th>Description</th></tr><tr><td>m</td><td>moveto</td><td>2</td><td>Start a new sub-path at the given (x,y) coordinate.</td></tr><tr><td>l</td><td>lineto</td><td>2*</td><td>Draw a line from the current point to the given (x,y) coordinate which becomes the new current point. Specifying a number of coordinate pairs forms a polyline.</td></tr><tr><td>c</td><td>curveto</td><td>6*</td><td>Draw a cubic bézier curve from the current point to the coordinate given by the final two parameters. The control points are given by the first four parameters.</td></tr><tr><td>x</td><td>close</td><td>0</td><td>Close the current sub-path by drawing a straight line from the current point to the original moveto point.</td></tr><tr><td>e</td><td>end</td><td>0</td><td>End the current set of sub-paths. A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones.</td></tr><tr><td>t</td><td>rmoveto</td><td>2*</td><td>Start a new sub-path at a coordinate relative to the current point, cp (cpx+x, cpy+y).</td></tr><tr><td>r</td><td>rlineto</td><td>2*</td><td>Draw a line from the current point to the given relative coordinate (cpx+x, cpy+y).</td></tr><tr><td>v</td><td>rcurveto</td><td>6*</td><td>Cubic bézier curve using the given coordinate relative to the current point.</td></tr><tr><td>nf</td><td>nofill</td><td>0</td><td>The current set of sub-paths (delimited by e) is not filled.</td></tr></table> | Command    | Name                                                                                                                                                                                 | Parameters | Description | m | moveto | 2 | Start a new sub-path at the given (x,y) coordinate. | l | lineto | 2* | Draw a line from the current point to the given (x,y) coordinate which becomes the new current point. Specifying a number of coordinate pairs forms a polyline. | c | curveto | 6* | Draw a cubic bézier curve from the current point to the coordinate given by the final two parameters. The control points are given by the first four parameters. | x | close | 0 | Close the current sub-path by drawing a straight line from the current point to the original moveto point. | e | end | 0 | End the current set of sub-paths. A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. | t | rmoveto | 2* | Start a new sub-path at a coordinate relative to the current point, cp (cpx+x, cpy+y). | r | rlineto | 2* | Draw a line from the current point to the given relative coordinate (cpx+x, cpy+y). | v | rcurveto | 6* | Cubic bézier curve using the given coordinate relative to the current point. | nf | nofill | 0 | The current set of sub-paths (delimited by e) is not filled. |
| Command    | Name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Parameters | Description                                                                                                                                                                          |            |             |   |        |   |                                                     |   |        |    |                                                                                                                                                                 |   |         |    |                                                                                                                                                                  |   |       |   |                                                                                                            |   |     |   |                                                                                                                                                                                      |   |         |    |                                                                                        |   |         |    |                                                                                     |   |          |    |                                                                              |    |        |   |                                                              |

A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. |            |             |   |        |   |                                                     |   |        |    |                                                                                                                                                                 |   |         |    |                                                                                                                                                                  |   |       |   |                                                                                                            |   |     |   |                                                                                                                                                                                      |   |         |    |                                                                                        |   |         |    |                                                                                     |   |          |    |                                                                              |    |        |   |                                                              |

|            | ns          | nostroke                | 0  | The current set of sub-paths (delimited by e) is not stroked.                                                                                                                                                                                                                                                                                                                                                                                               |
|            | ae          | angleellipseto          | 6* | Draws a segment of an ellipse as described using these parameters. A straight line is drawn from the current point to the start point of the segment. The parameters are: center (x,y), size(w,h), start angle, end angle.                                                                                                                                                                                                                                  |
|            | al          | angleellipse            | 6* | Same as angleellipseto except that there is an implied moveto the starting point of the segment.                                                                                                                                                                                                                                                                                                                                                            |
|            | at          | arcto                   | 8* | A segment of the ellipse is drawn which starts at the angle defined by the start radius vector and ends at the angle defined by the end vector. A straight line is drawn from the current point to the start of the arc. The arc is always drawn in a counterclockwise direction. The parameters are: left, top, right, bottom, start(x,y), end(x,y). The first four values define the bounding box of an ellipse. The last four define two radial vectors. |
|            | ar          | arc                     | 8* | Same as arcto except there is an implied moveto the start point of the arc.                                                                                                                                                                                                                                                                                                                                                                                 |
|            | wa          | clockwisearco           | 8* | Same as arcto but the arc is drawn in a clockwise direction.                                                                                                                                                                                                                                                                                                                                                                                                |
|            | wr          | clockwisearc            | 8* | Same as arc but the arc is drawn in a clockwise direction                                                                                                                                                                                                                                                                                                                                                                                                   |
|            | qx          | ellipticalquadrant<br>x | 2* | A quarter ellipse is drawn from the current point to the given end point. The elliptical segment is initially tangential to a line parallel to the x-axis. (i.e. the segment starts out horizontal). The parameters are: end(x,y).                                                                                                                                                                                                                          |
|            | qy          | ellipticalquadrant<br>y | 2* | Same as ellipticalquadrantx except that the elliptical segment is initially tangential to a line parallel to the y-axis (i.e. the segment starts out vertical).                                                                                                                                                                                                                                                                                             |

| Attributes | Description                                                                               |                 |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|-------------------------------------------------------------------------------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | qb                                                                                        | quadraticbezier | 2+2* | Defines one or more quadratic bézier curves by means of control points and an end point. Intermediate (on-curve) points are obtained by interpolation between successive control points as in the OpenType font specification. The sub-path need not be started in which case the sub-path is closed. In this case the last point of the sub-path defines the start point of the quadratic bézier. The parameters are: controlpoint(x,y)*, end(x,y). |
|            | The possible values for this attribute are defined by the W3C XML Schema string datatype. |                 |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

[Note: The W3C XML Schema definition of this element’s content model ([CT\\_Path](#)) is located in §A.6.1. *end note*]

19.1.2.15 [polyline \(Multiple Path Line\)](#)

This element defines shapes made up of connected line segments.

[Example:

```
<v:polyline
  points="50pt,0pt 120pt,50pt 150pt,100pt 170pt,75pt 250pt,50pt">
</v:polyline>
```

*end example*]

| cliptowrap (Clip to Wrapping Polygon)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                           |
| connectortype (Shape Connector Type)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| coordorigin (Coordinate Space Origin)                                                              | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"</pre> |

| Attributes                                                                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

If true, hides all shape handles except the top left and bottom right; that is, the same handles that are used for a straight line segment. Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:oned="true" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                           |

| Attributes                                                                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                              | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <p>opacity (Fill Color Opacity)</p>                                                                          | <p>Specifies the opacity of the primary fill color. Default is 1.0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. [<i>Example:</i> A value of "52429f" represents 52429/65536 or 0.8. <i>end example]</i></p> <p>[<i>Example:</i> The red color is 25% opaque:</p> <pre data-bbox="451 653 1015 751">&lt;v:fill type="gradient" color="red"   color2="blue" opacity=".25"&gt; &lt;/v:fill&gt;</pre> <div data-bbox="451 783 779 1003">  <p>opacity="1"</p> <p>opacity=".25"</p> </div> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>points (Points for Compound Line)</p>                                                                     | <p>Specifies a set of straight line segments that are composed of a series of pairs of points. Default is "0,0 10,10".</p> <p>Points are specified in the coordinate system of the parent element. If the parent is not a VML element, the default unit is a pixel. Allowed units are in, cm, mm, pt, pc and px. While commas are not required, they should be used for easier readability.</p> <p>See above for an example.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                             |
| <p>preferrelative (Relative Resize Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the original size of an object is saved after reformatting. Default is false. If true, the original size of the object is stored and all resizing is based on a percentage of that original size. Otherwise, each resizing resets the scale to 100%.</p> <p>[<i>Example:</i></p> <pre data-bbox="451 1816 1063 1879">&lt;v:shape ... o:preferrelative="true" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                             |

| Attributes                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                             | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                    |
| <p>print (Print Toggle)</p>                                                                 | <p>Specifies whether the shape is printed. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                              |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                           |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits</p>                                                                                                                                                                                      |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    | <p>representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                    |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                           |

| <p>style (Shape Styling Properties)</p> | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:<br/> <code>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ...</code><br/> <code>&gt;</code><br/> <code>&lt;/v:shape&gt;</code><br/> <i>end example]</i></p> <table border="1"> <thead> <tr> <th data-bbox="415 966 664 1012">Property</th><th data-bbox="664 966 1479 1012">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="415 1012 664 1283">flip</td><td data-bbox="664 1012 1479 1283"> <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> </td></tr> <tr> <td data-bbox="415 1283 664 1692">height</td><td data-bbox="664 1283 1479 1692"> <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> </td></tr> <tr> <td data-bbox="415 1692 664 1877">left</td><td data-bbox="664 1692 1479 1877"> <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> </td></tr> </tbody> </table> | Property | Description | flip | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> | height | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> | left | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> |
| Property                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                    |
| flip                                    | <p>Specifies that the orientation of a shape is flipped. Default is no value. If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                            |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | margin-left   | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>    |
|            | margin-right  | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>  |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | margin-top                       | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul>                                                                                                                                                                                                                                                                                                                                                                   |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                             |

| Attributes | Description                    |                                                                                                                                                                                                                                                                                               |
|------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
|            | mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
|            | mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
|            | mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
|            | mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
|            | mso-wrap-edited                | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.</p>                                                                             |
|            | mso-wrap-style                 | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                       |
|            | position                       | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p>                                                                                                      |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <ul style="list-style-type: none"> <li>• <b>static</b> - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• <b>absolute</b> - The element is positioned relative to the parent, using the top and left properties.</li> <li>• <b>relative</b> - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>                                                                                                                                                                                                       |
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b> - Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>hidden</b> - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• <b>inherit</b> - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                            |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> </ul>                                                                                                                                                                                                                                          |

|            | shadow                | Default is false.                                                                                                                                                                                                                                                                                                                                                                      |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul>                                                                                   |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                                                                                |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                                                                   |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between the letters.</li> <li>• stretch-justify - Stretches the letters to fill in the space.</li> </ul>                                      |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                                                                                              |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                                                                                       |
|            | v-text-spacing-mode   | <p>Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• tightening</li> <li>• tracking</li> </ul> |
|            | v-text-spacing        | Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.                                                                                                                                                                                                                                                                                             |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |

| wrapcoords (Shape Bounding Polygon) | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre> &lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt; </pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_PolyLine](#)) is located in §A.6.1. *end note]*

### 19.1.2.16 `rect` (Rectangle)

This element is used to draw a simple rectangle. The CSS2 style content width and height define the width and height of the rectangle.

[Example:

```

<v:rect fillcolor="red"
  style="position:relative;top:0;left:0;width:100;height:100">
</v:rect>

```

*end example]*

| <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                                              | <p>[Example:</p> <pre>&lt;v:shape ... o:clip="true"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                    |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100).</p> |

| Attributes                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                         | <p>The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>coordsize<br/>(Coordinate Space Size)</p>                            | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>dgmlayout<br/>(Diagram Node Layout Identifier)</p> <p>Namespace:</p> | <p>Specifies the kind of automatic layout to apply to the diagram node. This is only meaningful if the shape is a node in an organization chart, which is denoted by the orgchart value of the editas attribute of the group element.</p> <p>[Example:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Attributes                                                                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>                                                |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                      |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                   |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre> |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                       |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                    |
| style (Shape Styling               | Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Attributes  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Properties) | <p>2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:<br/> <code>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ...</code><br/> <code>&gt;</code><br/> <code>&lt;/v:shape&gt;</code><br/> end example]</p> <table border="1"> <thead> <tr> <th>Property</th><th>Description</th></tr> </thead> <tbody> <tr> <td>flip</td><td> <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> </td></tr> <tr> <td>height</td><td> <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> </td></tr> <tr> <td>left</td><td> <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> </ul> </td></tr> </tbody> </table> | Property | Description | flip | <p>Specifies that the orientation of a shape is flipped. Default is no value. |            |                          | <ul style="list-style-type: none"> <li>• page</li> <li>• text</li> <li>• line</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | mso-wrap-distance-bottom | Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                        |
|            | mso-wrap-distance-left   | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-right  | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                    |
|            | mso-wrap-distance-top    | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                           |
|            | mso-wrap-edited          | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                          |
|            | mso-wrap-style           | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                             |
|            | position                 | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> </ul> |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <ul style="list-style-type: none"> <li>• <b>relative</b> - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b> - Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>hidden</b> - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• <b>inherit</b> - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                            |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b> - Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                     |
|            | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Attributes | Description                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <p>title (Shape Title)</p>                                                                              | <p>Specifies the text displayed when the mouse pointer moves over the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... title="tooltip" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                       |
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                 |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is</p>                                                                                                                                                                                                                                                                                        |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre data-bbox="454 430 1161 525">&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model (CT\_Rect) is located in §A.6.1. end note]

#### 19.1.2.17 roundrect (Rounded Rectangle)

This element is used to draw a rectangle with rounded corners. The CSS2 style content width and height define the width and height of the rectangle.

[Example:

```
<v:roundrect fillcolor="red" arcsize="35%"
  style="position:relative;top:0;left:0;width:200;height:100">
</v:roundrect>
```

end example]

| Attributes                                                                                     | Description                                                                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| allowincell (Allow in Table Cell)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | Specifies whether a shape can be placed in a table. Default is false.<br><br>[Example:<br><br><pre>&lt;v:shape ... o:allowincell="true" ... &gt; &lt;/v:shape&gt;</pre> <i>end example</i> ]<br><br>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5). |
| allowoverlap (Allow Shape Overlap)                                                             | Specifies whether a shape can overlap another shape. Default is true. If false, the shape shifts left or right so as not to overlap another shape, similar to the behavior of the HTML float attribute.                                                                                             |

| Attributes                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Namespace:<br>urn:schemas-microsoft-com:office:office | <p>[<i>Example:</i></p> <pre>&lt;v:shape ... o:allowoverlap="false" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| alt (Alternate Text)                                  | <p>Specifies alternative text describing the graphical object. This text should provide a brief description of the shape for use by accessibility tools. Default is no value.</p> <p>[<i>Example:</i> The alt text describes the basic shape:</p> <pre>&lt;v:shape ... fillcolor="red" alt="Red rectangle"&gt; &lt;/v:shape&gt;</pre> <p>The alt text describes the contents of a shape displaying an image:</p> <pre>&lt;v:shape ... alt="Picture of a sunset"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                       |
| arcsize (Rounded Corner Arc Size)                     | <p>Specifies the amount of roundness for a rounded rectangle as a percentage of half the smaller dimension of the length and width of the rectangle. Default is 20%. An arc size of 0% yields square corners and 100% forms circular corners. A square with an arc size value of 100% is a circle. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. [<i>Example:</i> For example, a value of "52429f" represents 52429/65536 or 0.8. <i>end example]</i></p> <p>[<i>Example:</i></p> <pre>&lt;v:roundrect ... arcsize="35%"&gt; &lt;/v:roundrect&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| borderbottomcolor (Bottom Border)                     | <p>Specifies the bottom border color of an inline shape. Default is no value.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| bwmode (Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office   | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. <i>end example]</i></p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| bwnormal (Normal Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-           | <p>Specifies the black-and-white mode for normal black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in a pale grayscale in a normal black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwnormal="lightgrayscale" ... &gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                   |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p>                                                                                                                                                                                                                     |

| Attributes                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             | <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>coordsize</b><br>(Coordinate Space Size) | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p>                                                                  |

| Attributes                                                                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                |
| regroupid (Regroup ID)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |
| spid (Optional String)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                              |
| spt (Optional Number)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                           |
| strokecolor (Shape Stroke Color)                                                    | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are</p>                                                                                                                                                                                                                                                                          |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    | <p>typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                              |

| Attributes                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                            |

| style (Shape Styling Properties) | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:<br/> <code>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ...</code><br/> <code>&gt;</code><br/> <code>&lt;/v:shape&gt;</code><br/> <i>end example]</i></p> <table border="1"> <thead> <tr> <th data-bbox="415 1077 662 1123">Property</th><th data-bbox="662 1077 1477 1123">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="415 1123 662 1392">flip</td><td data-bbox="662 1123 1477 1392"> <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> </td></tr> <tr> <td data-bbox="415 1392 662 1801">height</td><td data-bbox="662 1392 1477 1801"> <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> </td></tr> <tr> <td data-bbox="415 1801 662 1877">left</td><td data-bbox="662 1801 1477 1877"> <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page.</p> </td></tr> </tbody> </table> | Property | Description | flip | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> | height | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> | left | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page.</p> |
| Property                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                            |
| flip                             | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                            |
| height                           | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                            |
| left                             | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                            |

|            | margin-right  | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or</li> </ul>                                                                                                                                                   |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                  | <p>ex). If no units are given, pixels (px) is assumed.</p> <ul style="list-style-type: none"> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | margin-top                       | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul>                                                                                                                                                                                                                                                                                                                                                                   |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                    |                                                                                                                                                                                                                                                                                               |
|------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                | <ul style="list-style-type: none"> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                 |
|            | mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
|            | mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
|            | mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
|            | mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
|            | mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
|            | mso-wrap-edited                | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.</p>                                                                             |
|            | mso-wrap-style                 | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                       |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | position    | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation    | <p>Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|            |                       | 900                                                                                                                                                                                                                                                                                                                                                                          |  |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                                                                          |  |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"><li>• none</li><li>• underline</li><li>• overline</li><li>• line-through</li><li>• blink</li></ul>                                                                                      |  |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                                                                      |  |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                                                         |  |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"><li>• left</li><li>• right</li><li>• center</li><li>• justify</li><li>• letter-justify - Distributes the extra space between the letters.</li><li>• stretch-justify - Stretches the letters to fill in the space.</li></ul>                                          |  |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                                                                                    |  |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                                                                             |  |
|            | v-text-spacing-mode   | Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are: <ul style="list-style-type: none"><li>• tightening</li><li>• tracking</li></ul> |  |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                |                                                                                            |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |

| wrapcoords (Shape Bounding Polygon) | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_RoundRect](#)) is located in §A.6.1.  
*end note]*

#### 19.1.2.18 shadow (Shadow Effect)

This element adds shadow effects to a shape. The on attribute shall be true for the shadow to be displayed.

[Example:

```
<v:shadow on="true" type="perspective"
  matrix="1,25,-2,,1.5,,.000001"
  offset="38pt,-6pt">
</v:shadow>
```

*end example]*

| matrix (Shadow Perspective Matrix) | <p>Specifies a perspective transform for a shadow. Default is no value.</p> <p>The matrix is given in the form "<math>s_{xx}</math>, <math>s_{xy}</math>, <math>s_{yx}</math>, <math>s_{yy}</math>, <math>p_x</math>, <math>p_y</math>" where <math>s</math> = scale and <math>p</math> = perspective. If the offset attribute is in absolute units then <math>p_x</math>, <math>p_y</math> are in 1/EMU units; otherwise they are an inverse fraction of the shape size.</p> <p>[Example: The following snippets explain the matrix parameters. The shadow is applied to a simple square with no fill and a red stroke color (note there is a default shadow offset):</p> <div data-bbox="451 932 558 1037" data-label="Image"> </div> <p>matrix=",,,,"</p> <p><math>s_{xx}</math>, <math>s_{yy}</math> specify scaling factors for the x and y dimensions:</p> <div data-bbox="451 1159 656 1264" data-label="Image"> </div> <p>matrix="2,,,,,"</p> <div data-bbox="451 1310 558 1520" data-label="Image"> </div> <p>matrix=",,,2,,"</p> <p><math>s_{xy}</math>, <math>s_{yx}</math> specify skews in the x and y dimensions:</p> <div data-bbox="451 1625 753 1730" data-label="Image"> </div> <p>matrix=",2,,,,,"</p> |

#### 19.1.2.19 `shape` (Shape Definition)

This element is used to describe a shape, the core object in VML. This element can appear by itself or within a group element (§19.1.2.7). If a `shapetype` element (§19.1.2.20) is referenced using the `type` attribute, any attributes specified in the shape override those found in the `shapetype`.

[Example:

```
<v:shape style="position:absolute;top:50;left:20;width:50;height:50"
  path="m 0,0 l 0,1000 1000,1000 1000,0 x e">
  <v:shadow on="true" type="perspective"
    matrix="1.25,-2,,1.5,,.000001" offset="38pt,-6pt"/>
</v:shape>
```

```
<v:shape style="position:absolute;top:50;left:20;width:50;height:50"
  fillcolor="yellow" path="m 0,0 l 0,1000 1000,1000 1000,0 x e">
  <v:extrusion on="true" lightposition="0,-2000,10000"/>
</v:shape>
```

*end example]*

| adj (Adjustment Parameters) | <p>Specifies a comma-delimited list of parameters, or adjustment values, used to define values for a parameterized formula. Values can be omitted. There can be up to 8 adjust values. Each value is referenced using # followed by a number corresponding to the zero-based index for that value in the list of adjustment values. [Example: For example, #2 references the second value in the adj list. end example]</p> <p>[Example: The following shape uses formulas to define a simple rectangle. The adj values are referenced by the eqn attribute of the f element (§19.1.2.4) and in turn referenced by the path element (§19.1.2.14).</p> <pre> &lt;v:shape   coordorigin="0 0" coordsize="200 200"   style="position:relative;top:30;left:30;width:20;height:20"   adj="1, 1, 1, 200, 200, 200, 200, 1"&gt;   &lt;v:path v="m @0,@1 l @2,@3, @4,@5, @6,@7 x e"/&gt;   &lt;v:formulas&gt;     &lt;v:f eqn="val #0"/&gt;     &lt;v:f eqn="val #1"/&gt;     &lt;v:f eqn="val #2"/&gt;     &lt;v:f eqn="val #3"/&gt;     &lt;v:f eqn="val #4"/&gt;     &lt;v:f eqn="val #5"/&gt;     &lt;v:f eqn="val #6"/&gt;     &lt;v:f eqn="val #7"/&gt;   &lt;/v:formulas&gt; &lt;/v:shape&gt; </pre> <p>This is the equivalent of:</p> <pre> &lt;v:shape   coordorigin="0 0" coordsize="200 200"   style="position:relative;top:30;left:30;width:20;height:20"   path="m 1,1 l 1,200, 200,200, 200,1 x e"&gt; &lt;/v:shape&gt; </pre> |

| <p>bwmode (Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. end example]</p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| <p>bwnormal (Normal Black-and-White Mode)</p>                                                        | <p>Specifies the black-and-white mode for normal black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in a pale grayscale in a normal black-and-white</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <p>clip (Clipping Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                | <p>Specifies that the clipping region is active. This is used in conjunction with the clippath (§19.2.2.3) element to create a clipping region.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:clip="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                       |
| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                   |

| Attributes                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>coordorigin</b><br>(Coordinate Space Origin) | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>coordsize</b><br>(Coordinate Space Size)     | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                             | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                    |
| <p>print (Print Toggle)</p>                                                                 | <p>Specifies whether the shape is printed. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                              |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                           |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details</p>                                                                                              |

| Attributes                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    | <p>are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                            |
| stroked (Shape Stroke Toggle)      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| strokeweight (Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                           |

|            | margin-right  | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>  |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | margin-top                       | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul>                                                                                                                                                                                                                                                                                                                                                                   |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                             |

| Attributes                     | Description                                                                                                                                                                                                                                                                                   |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
| mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
| mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
| mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
| mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
| mso-wrap-edited                | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.</p>                                                                             |
| mso-wrap-style                 | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                       |
| position                       | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p>                                                                                                      |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <ul style="list-style-type: none"> <li>• <b>static</b> - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• <b>absolute</b> - The element is positioned relative to the parent, using the top and left properties.</li> <li>• <b>relative</b> - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>                                                                                                                                                                                                       |
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b> - Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>hidden</b> - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• <b>inherit</b> - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                            |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> </ul>                                                                                                                                                                                                                                          |

| Attributes                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|            | shadow                | Default is false.                                                                                                                                                                                                                                                                                                                                                                      |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul>                                                                                   |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                                                                                |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                                                                   |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between the letters.</li> <li>• stretch-justify - Stretches the letters to fill in the space.</li> </ul>                                      |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                                                                                              |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                                                                                       |
|            | v-text-spacing-mode   | <p>Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• tightening</li> <li>• tracking</li> </ul> |
|            | v-text-spacing        | Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.                                                                                                                                                                                                                                                                                             |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |

A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                           |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ... wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Shape](#)) is located in §A.6.1. *end note*]

### 19.1.2.20 shapetype (Shape Template)

This element defines a shape template that can be used to create other shapes. Shapetype is identical to the shape element (§19.1.2.19) except it cannot reference another shapetype element. The type attribute shall not be used with shapetype. Attributes defined in the shape override any that appear in the shapetype. CSS positioning attributes (such as top, width, z-index, rotation, flip) are not passed to a shape from a shapetype. To use this element, create a shapetype with a specific id attribute. Then create a shape and reference the shapetype's id using the type attribute.

[Example:

```
<v:shapetype id="mytype" fillcolor="silver" strokecolor="blue">
  <v:path v="m 0,0 l 0,1000, 1000,1000, 1000,0 x e"/>
  <v:fill on="true" type="gradient" color2="navy" angle="-45"/>
</v:shapetype>
<v:shape type="#mytype"
  style="position:absolute;top:10;left:10;width:50;height:50"/>
<v:shape type="#mytype" fillcolor="teal"
  style="position:absolute;top:10;left:75;width:75;height:50"/>
<v:shape type="#mytype"
  style="position:absolute;top:10;left:165;width:50;height:50">
  <v:fill type="solid"/>
</v:shape>
<v:shape type="#mytype" path="m 500,0 l 1000,1000 0,1000 x e"
  style="position:absolute;top:10;left:230;width:50;height:50"/>
```

*end example]*

| print (Print Toggle)                                                                                 | <p>Specifies whether the shape is printed. Default is true.</p> <p><i>[Example:</i></p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Attributes                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                             | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>                                                                                                                             |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                                                                                                       |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  |

| Attributes                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>stroked (Shape Stroke Toggle)</p>      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>strokeweight (Shape Stroke Weight)</p> | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                   |
| <p>style (Shape Styling Properties)</p>   | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined</p>                                                                                                                                                                                                   |
