October 1968

COPYRIGHT RESERVED

The copyright of ISO Recommendations and ISO Standards belongs to ISO Member Bodies. Reproduction of these documents, in any country, may be authorized therefore only by the national standards organization of that country, being a member of ISO.

For each individual country the only valid standard is the national standard of that country.

Printed in Switzerland

Also issued in French and Russian. Copies to be obtained through the national standards organizations.

BRIEF HISTORY

The ISO Recommendation R 858, *Netting yarns for fishing nets – Designation in the Tex System*, was drawn up by Technical Committee ISO/TC 38, *Textiles*, the Secretariat of which is held by the British Standards Institution (BSI).

Work on this question by the Technical Committee began in 1963 and led, in 1966, to the adoption of a Draft ISO Recommendation.

In April 1967, this Draft ISO Recommendation (No. 1239) was circulated to all the ISO Member Bodies for enquiry. It was approved, subject to a few modifications of an editorial nature, by the following Member Bodies :

Australia	India	Spain
Austria	Iran	Sweden
Belgium	Israel	Switzerland
Brazil	Japan	Thailand
Bulgaria	Netherlands	Turkey
Canada	New Zealand	United Kingdom
Denmark	Norway	U.S.A.
France	Romania	U.S.S.R.
Germany	South Africa, Rep. of	

Two Member Bodies opposed the approval of the Draft :

Czechoslovakia
Italy

The Draft ISO Recommendation was then submitted by correspondence to the ISO Council, which decided, in October 1968, to accept it as an ISO RECOMMENDATION.

NETTING YARNS FOR FISHING NETS

DESIGNATION IN THE TEX SYSTEM*

INTRODUCTION

The designation of netting yarns for fishing nets in the Tex System will ultimately replace designations made according to traditional systems.

The new designation will principally consist in naming the resultant linear density.

1. SCOPE

This ISO Recommendation describes a method for the designation of netting yarns for fishing nets by the use of their linear density or of their resultant linear density, expressed in tex.

2. FIELD OF APPLICATION

As a general rule, netting yarns designated by their linear density or their resultant linear density are usually grey yarns without any preparation.

If the indication of resultant linear density takes account of any effects of chemical or physical treatment, this should be mentioned.
