Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/TC 215, *Health informatics*.

ISO/IEC/TR 80001 consists of the following parts, under the general title *Application of risk management for IT-networks incorporating medical devices*:

- *Part 1: Roles, responsibilities and activities*
- *Part 2-1: Step-by-step risk management of medical IT-networks; Practical applications and Examples*
- *Part 2-2: Guidance for the communication of medical device security needs, risks and controls*
- *Part 2-3: Guidance for wireless networks*
- *Part 2-4: General implementation guidance for Healthcare Delivery Organizations*
- *Part 2-5: Application guidance — Guidance for distributed alarm systems*
- *Part 2-6: Application guidance — Guidance for responsibility agreements*
- *Part 2-7: Guidance for Healthcare Delivery Organizations (HDOs) on how to self-assess their conformance with IEC 80001-1*

The following parts are under preparation:

- *Part 2-8: Application guidance — Guidance on standards for establishing the security capabilities identified in IEC 80001-2-2*

Introduction

This part of ISO/TR 80001 provides guidance for a Healthcare Delivery Organization (HDO) that wishes to self-assess its implementation of the processes of IEC 80001-1. This part of ISO/TR 80001 can be used to assess Medical IT-Network projects where IEC 80001-1 has been determined to be applicable. This part of ISO/TR 80001 provides an exemplar assessment method which includes a set of questions which can be used to assess the performance of risk management of a Medical IT-Network incorporating a medical device. This assessment method can be used in its presented form or can be tailored to meet the needs of a specific HDO. A Process Reference Model (PRM) and an example Process Assessment Model (PAM) that meet the requirements of ISO/IEC 15504-2 are included in the Appendices of this part of ISO/TR 80001. The PRM and PAM can be used to provide a standardized basis for tailoring the exemplar assessment method where required.

This part of ISO/TR 80001 can be used in a number of ways including the following:

- a) The assessment method can be used to perform an assessment to determine conformance against IEC 80001-1.
- b) In instances where conformance has been established, the assessment method can also be used to assess risk management processes and determine the capability level at which these processes are being performed.
- c) Based on the context of the HDO being assessed, the assessment method can be tailored to address the individual HDO use, needs and concerns.

The results of the assessment will highlight any weaknesses within current risk management processes and can be used as a basis for the improvement of these processes. Where necessary, modification of the assessment method can be undertaken with reference to the PRM and PAM for IEC 80001-1 which are also included in this part of ISO/TR 80001. This approach allows for a lightweight assessment approach to which more rigour can be added if required. For example, a re-assessment may be required in instances where an initial assessment revealed weaknesses in the current risk management processes and improvements have subsequently been made which require re-assessment to assess their impact on conformance. A re-assessment may also be performed in instances where confirmation is required that process improvement measures which have been undertaken have resulted in the achievement of a higher capability level.

This part of ISO/TR 80001 provides the following:

- guidance for a HDO to self-assess implementation of the processes of IEC 80001-1;
- an exemplar assessment method which
 - includes a set of questions,
 - can be used to assess the performance of risk management of a Medical IT-Network incorporating a medical device,
 - can be used in its presented form, and
 - can be tailored on a standardised basis using the included PRM and PAM;
- a PRM that meet the requirements of ISO/IEC 15504-2;
- an example PAM that meet the requirements of ISO/IEC 15504-2.

NOTE This part of ISO/TR 80001 contains original material that is © 2013, Dundalk Institute of Technology, Ireland. Permission is granted to ISO and IEC to reproduce and circulate this material, this being without prejudice to the rights of Dundalk Institute of Technology to exploit the original text elsewhere.

Application of risk management for IT-networks incorporating medical devices — Application guidance —

Part 2-7:

Guidance for Healthcare Delivery Organizations (HDOs) on how to self-assess their conformance with IEC 80001-1

1 Scope

The purpose of this part of ISO/TR 80001 is to provide guidance to HDOs on self-assessment of their conformance against IEC 80001-1.

The purpose of this part of ISO/TR 80001 is to

- a) provide guidance to HDOs on self-assessment of their conformance against IEC 80001-1,
- b) provide an exemplar assessment method which can be used by HDOs in varying contexts to assess themselves against IEC 80001-1,
- c) define a PRM comprising a set of processes, described in terms of process purpose and outcomes that demonstrate coverage of the requirements of IEC 80001-1, and
- d) define a PAM that meets the requirements of ISO/IEC 15504-2 and that supports the performance of an assessment by providing indicators for guidance on the interpretation of the process purposes and outcomes as defined in IEC 80001-1 (PRM) and the process attributes as defined in ISO/IEC 15504-2.

This part of ISO/TR 80001 does not introduce any requirements in addition to those expressed in IEC 80001-1.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

Members of ISO and IEC maintain registers of currently valid International Standards.

IEC 80001-1:2010, *Application of Risk Management for IT-Networks incorporating Medical Devices — Part 1: Roles, responsibilities and activities*

ISO/IEC 15504-1, *Information technology — Process assessment — Part 1: Concepts and vocabulary*

ISO/IEC 15504-2:2003, *Information technology — Process assessment — Part 2: Performing an assessment*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 15504-1 and IEC 80001-1 apply.

4 Assessment Method

4.1 Prerequisites

In order to perform an assessment, an assessor is required. When performing an assessment, it is preferable to have more than one assessor. In cases where the assessment is performed by more than one assessor, a lead assessor should be nominated. The need for multiple assessors is determined by the context of the HDO and the system under assessment. The context of the HDO and the scope of the assessment also determine the need for the modification of the presented exemplar assessment method. In addition, to performing the assessment, the assessor should consider interacting with all relevant risk management stakeholders both those internal and external to the HDO. The assessor should also have access to all relevant materials related to the performance of risk management activities.

4.2 Assessment Method Overview

The use of an assessment method allows assessments to be performed in a consistent and repeatable manner. The assessment method which is presented in this part of ISO/TR 80001 is based on the processes and practices as defined in the PRM and PAM which are presented in the appendices of this part of ISO/TR 80001. [Figure 1](#) shows the 14 processes and their respective process categories which are contained in the PAM. The PAM, which can be found in [Annex C](#), provides a full description of these processes including the activities (base practices) which must be performed to successfully achieve the purpose of the process. The assessment method consists of an approach to performing the assessment and a set of questions which allows the assessor to collect objective evidence to support an assessment of how each of the activities are being performed (and support the assignment of a capability rating to each process). On the basis of the evidence gathered during the assessment, the strengths and weaknesses of the processes can be identified and recommendations can be made to improve risk management practices and conformance with IEC 80001-1.

PAM Processes:

Medical IT Network Risk Management Process Group (MRM)			
MRM.1	Medical IT Network Risk Management Process		
MRM.1.1	Risk Analysis & Evaluation		
MRM.1.2	Risk Control		
MRM.1.3	Residual Risk		

Change Release Management & Configuration Management Process Group (CRCM)	
CRCM.1	Change Release & Configuration Management
CRCM.2	Decision on how to apply Risk Management
CRCM.3	Go Live

Live Network Risk Management Process Group (LNRM)	
LNRM.1	Monitoring
LNRM.2	Event Management

Medical IT Network Documentation and Planning Process Group (MDP)			
MDP.1	Medical IT Network Planning		
MDP.2	Medical IT Network Documentation		MDP.4 Risk Management Policy
MDP.3	Responsibility Agreements		MDP.5 Organisational Risk Management Process

Figure 1 — PAM Processes — Assessment Method

4.3 Assessment Stages

In order to produce a repeatable and consistent approach to assessment, the assessment is carried out in a number of stages. A seven-stage procedure for the performance of the assessment has been defined. Each of the stages is described in the following sections of this clause:

4.3.1 Stage 1 — Defining Assessment Scope

This is the initial planning stage of the assessment. During this stage of the assessment, the lead assessor meets with Top management and the scope of the assessment is defined. This stage can be used to define to which Medical IT-Networks IEC 80001-1 is applicable. The system (or IT network modification project) which is to be the focus of the assessment is defined and the context of the system is understood. Risk management stakeholders should be identified. Risk management stakeholders are both internal (e.g. clinical engineering) and external (e.g. medical device manufacturers) to the HDO. The lead assessor should ensure that Top management sponsors the assessment and that all relevant risk management stakeholders are available to participate for the duration of the assessment process.

4.3.2 Stage 2 — Stakeholder Involvement

Having secured the commitment of all relevant risk management stakeholders to participate in the assessment process, the lead assessor meets with risk management stakeholders to explain the assessment method. The lead assessor explains the agreed scope of the assessment and explains how the assessment is to be conducted and how findings from the assessment are to be communicated. As risk management stakeholders consist of members from a cross disciplinary team, the lead assessor ensures that all stakeholders are clear on what their participation in the assessment involves.

A sample template which can be used to record the information collected in stages 1 and 2 of the assessment process is provided in [A.2.2](#).

4.3.3 Stage 3 — Information Collection and Evaluation

During this stage of the assessment, the lead assessor interviews various risk management stakeholders using a set of scripted questions (for the exemplar assessment questions, see [A.1](#)) and evaluates the responses. Group interviews should be used where possible to gain an understanding of risk management processes from varying stakeholder perspectives. A combination of individual and group interviews may be used. To facilitate the recording of the responses, a second assessor may be used to take notes on the interviews. Additional questions may be required if clarification is necessary. The assessor uses the questions to promote discussion on risk management practices which are currently in place. At this stage, the lead assessor can also inspect work products related to risk management activities and evaluate these work products on the basis of the assessment questions.

A sample template which can be used to record the information collected during the interviews which are performed in stage 3 of the assessment process is provided in [A.2.3](#).

4.3.4 Stage 4 — Findings Report

A findings report is drafted based on the data gathered during stage 3. The lead assessor reviews the interview notes and evaluates the responses to the scripted questions and any available work products. Having reviewed the evidence gathered during the assessment, the lead assessor generates a rating for the response to the questions based on the Process Attribute Rating Scale as detailed in [4.4](#). In the case of an assessment to assess conformance, the findings report should state whether conformance to the standard (based on an assessment of all 14 processes) has been achieved. On the basis of the evidence gathered during the assessment, the lead assessor identifies strengths and weaknesses within the current risk management practices. The lead assessor includes in the findings report a set of recommendations to address identified issues and which can be implemented in order to improve risk management practices and facilitate the improvement of risk management processes.

A sample template which can be used to draft the findings report which is prepared during stages 3 of the assessment process is provided in [A.2.3](#).

4.3.5 Stage 5 — Presentation of Findings

The findings report is presented by the lead assessor to Top management and risk management stakeholders who have taken part in the assessment. At this stage, a date for a reassessment can be agreed.

Stages 1 to 5 above complete the assessment process. Where a follow-up assessment is required, stages 6 and 7 below can be performed. A reassessment can be used to confirm that the recommendations for improvements to the risk management process have improved risk management processes as envisaged.

4.3.6 Stage 6 — Improvement Plan (optional)

Having allowed time for the findings report to be read and understood, the lead assessor meets with Top management and risk management stakeholders to review the findings of the report. On the basis of the report, a plan for improvements to the risk management process is agreed. The plan should include specific improvement objectives and discussion and timelines for the implementation of the identified improvements.

4.3.7 Stage 7 — Follow-up Assessment (optional)

A follow-up assessment can be performed to ensure that improvements to the risk management processes have been implemented. The reassessment, if required, can be performed on the same project or on a similar Medical IT-Network project to assess if improvements to the process have been made and the impact of these improvements. For example, a reassessment can be initiated in instances where conformance was not determined to have been achieved in the previous assessment and improvements have been made to address the weaknesses. The reassessment determines if the implemented improvements have achieved conformance. A reassessment can also be initiated to confirm that improvements (identified and implemented as a result of the previous assessment) have resulted in the achievement of a higher capability level for a specific process or processes. The scope of the reassessment depends on the weaknesses highlighted in the previous assessment and as such can address all processes or a subset of processes.

4.4 Process attribute rating scale

4.4.1 Rating of process attributes

When performing an assessment of the capability of risk management processes, each of the base practices is reviewed using objective evidence gathered during assessment interviews and through examination of work products. On the basis of this review, each of the base practices can be assigned a rating. The capability level of the process is based on the average rating of the base practices related to the process. ISO/IEC 15504-2 defines six capability levels from Level 0 (Incomplete Process) to Level 5 (Optimizing Process) and defines attributes of the process that are associated with the achievement of each of the capability levels. An assessment of conformance seeks to confirm that all processes are being performed at Capability Level 1 (Performed Process). For achievement of Capability Level 1, it must be determined during the assessment that risk management processes (as defined within the PAM in [Annex C](#)) are being performed in a manner that the purpose of all processes has been achieved. Process performance and capability attributes as defined in ISO/IEC 15504-2 are discussed in detail in [C.2.2.3, Table C.1](#). When performing an assessment of risk management processes at all capability levels, the process attribute rating scale as defined in ISO/IEC 15504-2 should be used.

The extent of achievement of a process attribute is measured using an ordinal scale of measurement as defined [4.4.2](#).

4.4.2 Process attribute rating values

The ordinal rating scale defined below shall be used to express the levels of achievement (process attribute rating values) of the process attributes.

N Not achieved

There is little or no evidence of achievement of the defined attribute in the assessed process.

P Partially achieved

There is some evidence of an approach to, and some achievement of, the defined attribute in the assessed process. Some aspects of achievement of the attribute may be unpredictable.

L Largely achieved

There is evidence of a systematic approach to, and significant achievement of, the defined attribute in the assessed process. Some weakness related to this attribute may exist in the assessed process.

F Fully achieved

There is evidence of a complete and systematic approach to, and full achievement of, the defined attribute in the assessed process. No significant weaknesses related to this attribute exist in the assessed process.

The ordinal points defined above shall be understood in terms of a percentage scale representing extent of achievement.

The corresponding values shall be:

N	Not achieved	0 to 15 % achievement
P	Partially achieved	>15 % to 50 % achievement
L	Largely achieved	>50 % to 85 % achievement
F	Fully achieved	>85 % to 100 % achievement

4.5 Capability Levels

The exemplar assessment method which is provided in this part of ISO/TR 80001 allows HDO's to assess their current risk management processes. The focus of the exemplar assessment method is to allow for an assessment to be performed to identify areas of the risk management processes which are not being performed in accordance with the requirements of IEC 80001-1 (i.e. processes which have not achieved level 1 capability) and allow recommendations to be made to allow for a level 1 capability level to be achieved. The exemplar assessment method uses a set of scripted questions, each of which are related to specific base practices as outlined in the PAM, to review risk management processes and identify any weaknesses within the current processes in line with the achievement of level 1 capability. Through the identification of weaknesses in the current process and the implementation of recommendations to address these weaknesses, capability levels upper than 1 may be achieved. The exemplar assessment method provided can also be used to assess against capability levels upper than 1 through the use of the capability level assessment as outlined in the PAM in [Annex C](#) which contains a full explanation of all capability levels and the associated assessment indicators which can be reviewed in assessing against capability levels upper than level 1.

4.6 Tailoring the Assessment Method

The exemplar assessment method as outlined in this part of ISO/TR 80001 provides a sample set of questions for use in the assessment of IEC 80001-1 risk management processes. The set of questions provided is intended as a guide who can then be tailored for use in a specific HDO context. The questions should be reviewed on the basis of the context of the HDO in question and amendments made to take into account any variation that are specific to the HDO. The exemplar questions which are provided are based on the base practices as outlined within the PAM in [Annex C](#). To tailor the assessment method questions, the base practices on which the questions are based should be reviewed by the assessor. The questions can then be modified, removed, or additional questions added as required by the individual context of the HDO. The assessor should ensure that they are fully aware of the HDO context in order to tailor the questions appropriately. The assessor should also ensure that the questions continue to be related to the base practices as described in the PAM. As the base practices within the PAM describe

high level activities that shall be performed in order to achieve the process purpose, they can be used as the basis for more specific questions related to the HDO context. Using this approach ensures that assessments take into account individual HDO context while performing a consistent approach to the assessment of the process purpose and the requirements of IEC 80001-1.

It should be noted that the assessment of a single base practice may require the use of more than one question. The use of the scripted questions in the assessment method is intended to be used as a tool to initiate a discussion on current risk movement processes and allow the assessor to collect objective evidence to support the achievement of a specific capability level. To facilitate the assessors ability to gain an understanding of current risk management processes, additional questions may be posed by the assessor which are not contained in the assessment method to support the judgement of the achievement of the capability level. The assessor may also review documentation which is generated by the performance of risk management activities at this stage.

Annex A (informative)

Assessment Method

A.1 Exemplar Assessment Questions

A.1.1 General

This Annex contains a set of exemplar assessment questions for each of the 14 processes which are defined in the PRM and PAM contained in [Annex B](#) and [C](#). The assessment questions are based on the base practices related to each process. For each process, the questions are provided along with some guidance for the assessor on points which should be considered when asking the questions. Where more information on a specific base practice is provided in other parts of IEC 80001, details of the technical report and the relevant section are provided. Details of the technical reports which have been published are provided in the bibliography section of this part of ISO/TR 80001. It should be noted that where a specific technical report is appropriate to the context of the network (e.g. a wireless network) then this part of ISO/TR 80001 should be consulted in full prior to the commencement of an assessment of the risk analysis processes related to this network. This set of questions is intended as a starting point for performing an assessment and are based on the base practices which are included in the PAM. Additional questions can be added to this set and asked during the assessment if clarification or additional information is required. This set of questions can also be modified to include questions which address the specific context of a particular HDO or a particular geographical region. These questions are intended to be used to perform an assessment against capability level 1. Additional questions can be added to address capability levels upper than 1. An explanation of capability levels is provided in the PRM and PAM which can be found in [Annex B](#) and [Annex C](#).

Each question relates to a specific base practice within a specific process within the PAM. To facilitate traceability between the PAM and the assessment questions each question has a unique identifier, e.g. MRM.1 BP1 Q.1. The code consists of the process ID which is used in the PRM and PAM (e.g. MRM.1), the base practice number (e.g. BP1), and the question number (e.g. Q.1).

A.1.2 MRM.1 Medical IT-Network Risk Management Process

Table A.1 — MRM.1 BP1

MRM.1 BP1: Establish a Medical IT-Network Risk Management File. Establish a Medical IT-Network Risk Management file that serves as a central repository for all documentation as required to carry out risk management activities.	
Question:	Guidance:
MRM.1 BP1 Q.1 Do you have a Medical IT-Network Risk Management File?	A Medical IT-Network Risk Management File shall be established to act as a central repository for all documentation required to carry out risk management activities in line with this standard. In addition, the file shall contain all supporting documentation required for risk management activities. The file shall contain the current configuration management information for the Medical IT-Network either through explicit documentation or by reference, for example, to a live database.
MRM.1 BP1 Q.2 How is the file stored, accessed, and maintained?	
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures
IEC 80001-2-1	7.4.6.4 Re-evaluate RISK

Table A.1 (continued)

IEC 80001-2-1	7.4.6.5 RISK/benefit analysis
IEC 80001-2-1	7.4.7 Step 7 Implement RISK CONTROL measures
IEC 80001-2-1	7.4.8.2 VERIFICATION of effectiveness
IEC 80001-2-1	7.4.9 Step 9: Evaluate any new RISKS arising from RISK CONTROL
IEC 80001-2-1	7.4.10 Step 10: Evaluate and report overall RESIDUAL RISK (in reference to documenting individual residual risks and overall residual risk)
IEC 80001-2-1	Figure 8 — Sample summary RISK ASSESSMENT register for the PACU example
IEC 80001-2-1	E.6 VERIFICATION of the design and execution of the RISK MANAGEMENT PROCESS
IEC 80001-2-1	Annex F RISK ANALYSING small changes in a MEDICAL IT-NETWORK (Figure F.1)
IEC 80001-2-4	4.1 Top management Responsibilities

Table A.2 — MRM.1 BP2

MRM.1 BP2: Assign Risk Management Resources. Ensure that adequate appropriately qualified resources (including Medical IT-Network Risk Manager) for management, performance of work, and assessment activities are assigned.	
Question:	Guidance:
MRM.1 BP2 Q.1 Have risk management resources been assigned?	Ensure that top management input into risk management process and ensure that adequate and relevant risk management resources are assigned (including Medical IT-Network Risk Manager) for the management, performance of work, and assessment activities are assigned. Personnel involved in the performance of risk management activities shall have the necessary qualifications, knowledge, and competence to perform risk management of the Medical IT-Network.
Technical Report:	Section:
IEC 80001-2-4	4.1 Top management Responsibilities
IEC 80001-2-4	4.2 Small Responsible Organization — points to consider
IEC 80001-2-4	4.3 Large Responsible Organization — points to consider
IEC 80001-2-4	5.3 Establish underlying risk framework
IEC 80001-2-4	5.4.1 Performing a Risk Assessment
IEC 80001-2-4	5.4.2.3 Large Responsible Organization — points to consider
IEC 80001-2-4	5.4.4 Manufacturer Identification

Table A.3 — MRM.1 BP3

MRM.1 BP3: Identify Risk Management Stakeholders and inform of their responsibilities. Identify people responsible for risk management and lifecycle management activities of medical devices incorporated into IT networks. Ensure resources are adequately informed of their responsibilities and that they co-operate with the Medical IT-Network Risk Manager.	
Question:	Guidance:
MRM.1 BP3 Q.1 Are risk management stakeholders identified and aware of their responsibilities?	Ensure that relevant risk management stakeholders are identified and informed of their responsibilities and that communication paths exist between the Medical IT-Network risk manager and risk management stakeholders. Risk management stakeholders shall co-operate with the Medical IT-Network Risk Manager in gathering, analysing, assessment, and storage of information needed for risk management; lifecycle management of medical devices incorporated into IT networks; choice and procurement of medical devices. Risk management activities require co-operation from management responsible for Medical IT-Networks, general IT networks, lifecycle management of medical devices connected to IT network, users of medical devices, and maintenance and technical support for medical devices.

Table A.3 (continued)

Technical Report:	Section:
IEC 80001-2-4	4.1 Top management Responsibilities
IEC 80001-2-4	4.2 Small Responsible Organization — points to consider
IEC 80001-2-4	4.3 Large Responsible Organization — points to consider
IEC 80001-2-4	5.3 Establish underlying risk framework
IEC 80001-2-4	5.4.1 Performing a Risk Assessment
IEC 80001-2-4	5.4.2.3 Large Responsible Organization — points to consider
IEC 80001-2-4	5.4.4 Manufacturer Identification
IEC 80001-2-4	5.4.5 External IT and bio-medical engineering support

Table A.4 — MRM.1 BP4

MRM.1 BP4: Manage the Medical IT-Network throughout the life cycle as per the Risk Management Plan and Process. Manage the supervision, operation, installation, and maintenance of Medical IT-Network(s) throughout the life cycle according to the Risk Management plan and follow the results of the IT-Network Risk Management Process. Maintain the key properties of the medical IT-network throughout the life cycle.	
Question:	Guidance:
MRM.1 BP4 Q.1 Is a life cycle approach taken to the management of the Medical IT-Network?	Consider whether risk management activities are performed during the supervision, operation, installation, and maintenance of Medical IT-Network(s) throughout the life cycle.
MRM.1 BP4 Q.2 Are risk management activities performed according to the risk Management Plan and process?	Consider whether risk management activities are being performed according to the RM plan and process.
MRM.1 BP4 Q.3 Are the key properties of the network considered during the performance of risk management activities?	Consider the impact to the network in terms of safety, effectiveness, and data and system security throughout the life cycle.
Technical Report:	Section:
IEC 80001-2-4	All Sections

Table A.5 — MRM.1 BP5

MRM.1 BP5: Document Risk Management activities. Risk management activities of risk analysis, risk evaluation, risk control, residual risk evaluation, and reporting and approval are documented in the Risk Management File.	
Question:	Guidance:
MRM.1 BP5 Q.1 Are risk management activities documented?	Ensure that risk management activities of risk analysis, risk evaluation, risk control, residual risk evaluation, reporting, and approval are documented in the risk management file. Documentation related to these risk management activities can be documented directly within the file or can exist as separate documents. Consider the appropriateness of the approach to documenting risk management activities according to the scope of the Medical IT-Network project.
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures

Table A.6 — MRM.1 BP6

MRM.1 BP6: Review Risk Management Activities at defined intervals. Risk management activities, including Event Management, are reviewed at defined intervals.	
Question:	Guidance:
MRM.1 BP6 Q.1 Are risk management activities reviewed at defined intervals?	Ensure that risk management activities including event management are reviewed at defined intervals to ensure the continuing suitability and effectiveness of the risk management process.
Technical Report:	Section:
IEC 80001-2-4	4.1 Top management responsibilities

A.1.3 MRM 1.1 Risk Analysis and Evaluation Process**Table A.7 — MRM1.1 BP1**

MRM.1.1 BP1: Identify likely hazards. Identify hazards that are likely to arise from the Medical IT-Network.	
Question:	Guidance:
MRM.1.1 BP1 Q.1 How do you identify likely hazards?	Identify hazards that are likely to arise from the Medical IT-Network when establishing a new Medical IT-Network, adding a device to the IT network, changing or modifying a device on the network, performing maintenance activities, or removing a device from the network. Consideration should be given to the Safety, Effectiveness, and Data and System security of the network when identifying hazards.

Table A.8 — MRM1.1 BP2

MRM.1.1 BP2: Estimate, Analyse, and Evaluate associated risks. Evaluate associated risks using available information or data throughout the lifecycle for each identified hazard.	
Question:	Guidance:
MRM.1.1 BP2 Q.1 How do you estimate, analyse, and evaluate associated risk for each identified hazard throughout the life cycle?	Consider how to estimate, analyse, and evaluate associated risks using the available information or data throughout the lifecycle. For each identified hazard, associated risk shall be estimated using available information or data. Results of these activities shall be recorded in the Medical IT-Network Risk Management File.
Technical Report:	Section:
IEC 80001-2-1	5.7 Degrees of RISK

Table A.9 — MRM1.1 BP3

MRM.1.1 BP3: List possible consequences of harm. List possible consequences of harm (where probability of occurrence cannot be estimated) for use in risk control.	
Question:	Guidance:
MRM.1.1 BP3 Q.1 How do you identify possible consequences of harm?	Where probability of occurrence of harm cannot be estimated, the possible consequences shall be listed for use in risk evaluation and control. Results of these activities shall be recorded in the Medical IT-Network Risk Management File

Table A.10 — MRM1.1 BP4

MRM.1.1 BP4: Record results of Risk Analysis and Evaluation activities. Record the results of these activities in the Medical IT-Network Risk Management file. Record instances where the estimated risk is so low that risk reduction need not be pursued (as per RM plan) in the Medical IT-Network Risk Management File.	
Question:	Guidance:
MRM.1.1 BP4 Q.1 How are the results of risk analysis and evaluation activities recorded?	Consider how risk analysis and evaluation activities are recorded throughout the life cycle. Record the results of these activities in the Medical IT-Network Risk Management file. Record instances where the estimated risk is so low that risk reduction need not be pursued (as per Risk Management plan) in the Medical IT-Network Risk Management File.

A.1.4 MRM 1.2 Risk Control Process**Table A.11 — MRM1.2 BP1**

MRM.1.2 BP1: Identify proposed risk control measures for each identified risk. Use risk control measures in the following order — inherent control by design, protective measures, and information for assurance. Consider key properties in the following order — safety, effectiveness, and data and systems security when considering risk control options.	
Question:	Guidance:
MRM.1.2 BP1 Q.1 Are proposed risk control measures identified for every risk?	Risk control measures shall be used in the following order, inherent control by design, protective measures, and information for assurance. Risk Control measures can include for example, Instructions and constraints documented as a change permit, network components, organizational considerations, or changes to the incorporated medical devices. For each risk, the design should carefully consider where to best implement the control to ensure sustainability, for example, by changes to the medical IT-network or manufacturer-authorized changes to the medical device. Consider key properties in the following order, safety, effectiveness, and data and systems security when considering risk control options. If, during risk control option analysis, the responsible organization determines that required risk reduction is not practicable, the responsible organization shall conduct and document a risk/benefit analysis of the residual risk.
MRM.1.2 BP1 Q.2 How are risk control measures considered in relation to the key properties and prioritised?

Table A.12 — MRM1.2 BP2

MRM.1.2 BP2: Manage Risk Control measures under the Change/Release Management process. Manage risk control measures that require a change to the Medical IT-Network under the Change Release Management process. Notify the medical device manufacturer (if a change is undertaken without documented consent of the manufacturer) and follow all necessary regulatory steps for putting such a modified medical device into service.	
Question:	Guidance:
MRM.1.2 BP2 Q.1 Are risk control measures managed under the Change/Release Management Process?	Risk Control measures shall be managed and implemented as per the Change/Release Management Process and recorded in the Medical IT-Network risk management file. Risk control measures within the medical device should only be implemented by the medical device manufacturer or by the responsible organization following the instructions for use or with the documented permission of the medical device manufacturer. Notify the medical device manufacturer (if a change to a medical device is undertaken without documented consent of the manufacturer) and follow all necessary regulatory steps for putting such a modified medical device into service. Changes to a medical device without documented consent of the medical device manufacturer are NOT recommended.

A.1.6 CRCM.1 Change Release and Configuration Management Process

Table A.24 — CRCM.1 BP1

CRCM.1 BP1: Document and Apply Configuration Management process. Document configuration management process and apply during the risk management of change release management.	
Question:	Guidance:
CRCM.1 BP1 Q.1 Is Configuration Management process documented and applied during the risk management of change release management?	Document configuration management process and apply during the risk management of change release management. Documentation related to these activities shall be maintained in the Medical IT-Network Risk Management File.

Table A.25 — CRCM.1 BP2

CRCM.1 BP2: Document Configuration Management information. Document current configuration management information in the Medical IT-Network Risk Management file.	
Question:	Guidance:
CRCM.1 BP2 Q.1 Is configuration management information documented in the Medical IT-Network Risk Management File?	Document current configuration management information in the Medical IT-Network Risk Management file. A configuration management process shall be documented and applied to control the versions of the medical IT-network across all risk management processes during medical IT-network change-release management. The configuration management information can be included in the medical IT-network risk management file either through explicit documentation or by reference, for example, to a live database. This file shall contain the current configuration management information for the medical IT-network.

Table A.26 — CRCM.1 BP3

CRCM.1 BP3: Document Change/Release Management Process. Document and apply change-release management (including Risk Management).	
Question:	Guidance:
CRCM.1 BP3 Q.1 Is the Change/Release Management Process documented?	Document and apply change-release management (including Risk Management). The medical IT-network risk manager shall ensure that a change-release management process exists for the medical IT-network and that the process includes risk management. It should be noted that unintended consequences can occur when two or more projects running in parallel are insufficiently coordinated. There is a single set of risk management documents per medical IT-network, because risk control measures for any given project or change must not conflict with existing risk control measures for the medical IT-network or with risk control measures proposed by a concurrent project.

Table A.27 — CRCM.1 BP4

CRCM.1 BP4: Use risk management process to determine acceptability of changes. Determine the approval and acceptability of changes using the results of the risk management process during the change-release process.	
Question:	Guidance:
CRCM.1 BP4 Q.1 Are the acceptability of changes determined using the risk management process.	Using the risk management process, determine the approval and acceptability of changes using the results of the risk management process during the change-release process.

Table A.28 — CRCM.1 BP5

CRCM.1 BP5: Implement action plans following the Change-Release management process.	
Question:	Guidance:
CRCM.1 BP5 Q.1 Are action plans implemented following the Change/Release Management Process?	Implement action plans following the Change-Release management process. For each change to the Medical IT-Network, the change Release Process is implemented. Action plans arising from risk assessment activities of risk analysis, risk evaluation, risk control, residual risk evaluation shall follow the change-release management process.

A.1.7 CRCM.2 Decision on how to apply Risk Management Process

Table A.29 — CRCM.2 BP1

CRCM.2 BP1: Implement Change-Release Management process. Implement the Change-release management process for any new medical IT-Network or a change to an existing medical IT-Network.	
Question:	Guidance:
CRCM.2 BP1 Q.1 Is the Change-Release Management Process implemented?	Implement the Change-release management process for any new medical IT-Network or a change to an existing medical IT-Network.

Table A.30 — CRCM.2 BP2

CRCM.2 BP2: Consider the nature of the change. Consider the nature of the change to decide if the change can be made by an applicable change permit or if a Medical IT-Network project is initiated.	
Question:	Guidance:
CRCM.2 BP2 Q.1 Has the nature of the change been identified?	Consider the nature of the change to decide whether the requirements are met by an applicable change permit. Where no applicable change permit exists, a medical IT-network project shall be initiated.
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures Annex F (informative) RISK ANALYSING small changes in a MEDICAL IT-NETWORK
IEC 80001-2-1	All sections — Guidance for Large and Small Organizations

Table A.31 — CRCM.2 BP3

CRCM.2 BP3: Define change permit. Define change permit and specify what records are to be kept for each permitted change.	
Question:	Guidance:
CRCM.2 BP3 Q.1 Has a change permit been defined and have records of what is to be kept for each permitted change been specified?	Define change permit and specify what records are to be kept for each permitted change. If the responsible organization decides, as a result of risk management activities, that a specified type of routine change may be performed with acceptable risk, subject to specified constraints, then the responsible organization may define a change permit which allows such routine changes and specifies the constraints.
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures Annex F (informative) RISK ANALYSING small changes in a MEDICAL IT-NETWORK

Table A.32 — CRCM.2 BP4

CRCM.2 BP4: Specify the constraints of the change permit.	
Question:	Guidance:
CRCM.2 BP4 Q.1 Have the constraints of the change permit been specified?	Specify the constraints of the change permit. For example, a change permit might allow varying the number of medical devices of a specified type in a medical IT-network within a specified range. Provided that the changes performed always conform to the change permit and its limitations, no change-release management or risk management is needed each time the change permit is used. Change permits can only be established as an outcome of the risk management process.
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures Annex F (informative) RISK ANALYSING small changes in a MEDICAL IT-NETWORK

Table A.33 — CRCM.2 BP5

CRCM.2 BP5: Implement routine change. Implement routine change once change permit has been defined and the constraints have been specified.	
Question:	Guidance:
CRCM.2 BP5 Q.1 Have routine changes been implemented according to the change permit?	Implement routine change once change permit has been defined and the constraints have been specified.

Table A.34 — CRCM.2 BP6

CRCM.2 BP6: Document Change permits. Document change permits and maintain in the Medical IT- Network Risk Management File.	
Question:	Guidance:
CRCM.2 BP6 Q.1 Are change permits documented and maintained in Medical IT-Network Risk Management File?	Document change permits and maintain in the Medical IT-Network Risk Management File.
Technical Report:	Section:
IEC 80001-2-1	7.4.6.2 Identify RISK CONTROL measures Annex F (informative) RISK ANALYSING small changes in a MEDICAL IT-NETWORK

Table A.35 — CRCM.2 BP7

CRCM.2 BP7: Establish project plan. Establish project plan for specific circumstances that have the potential to introduce new risk (not covered by change permit).	
Question:	Guidance:
CRCM.2 BP7 Q.1 Has a project plan been established?	Establish and maintain a project plan for the incorporation of a new type of medical device into an IT-network, for change to the medical IT-network, for change to the medical devices incorporated in the medical IT-network, for decommissioning of a medical device or medical IT-network, or any other activity that has the potential to introduce new risk. The project plan shall provide: <i>requirements for risk management activities including the following:</i> — activities to establish or update any risk management file documents needed as a result of this project, such as the risk management plan or other risk Management documents; — a plan to meet the requirements stated in the risk management plan for the affected medical IT-network(s); — activities for verification of risk control measures. <i>a description of the project including the following:</i> — identification of medical IT-network(s) developed or affected by the project; — requirements specification for the project; — specification of minimum set of documents required for the medical IT-network project. <i>the scope of the planned changes to the medical IT-network, including but not limited to the following:</i> — physical and logical configuration of the medical IT-network before and after the planned changes; — information flow before and after the planned changes; — components to be acquired or removed; — specifications of non-medical network components where relevant; — constraints on the extendability of the existing medical IT-network.

Table A.36 — CRCM.2 BP8

CRCM.2 BP8: Maintain and revise Project Plan. Maintain project plan and revise to reflect changes to the project.	
Question:	Guidance:
CRCM.2 BP8 Q.1 Has the project plan been maintained and revised to reflect changes to the project?	Maintain project plan and revise to reflect changes to the project. Where changes to the IT-Network occur frequently, the project plan may be established as a reusable protocol document containing all these essential elements.

Table A.37 — CRCM.2 BP9

CRCM.2 BP9: Document Project plan. Document the project plan in the Medical IT-Network Risk management file.	
Question:	Guidance:
CRCM.2 BP9 Q.1 Has the project Plan been documented?	Document the project plan in the Medical IT-Network Risk management file.

A.1.8 CRCM.3 Go-Live Process**Table A.38 — CRCM.3 BP1**

CRCM.3 BP1: Review residual risk. Review Medical IT-Network residual risk summaries for acceptability of risk associated with interactions of recent or pending projects or changes, prior to going live.	
Question:	Guidance:
CRCM.3 BP1 Q.1 Is residual risk reviewed in the context of recent or pending changes prior to go-live?	Prior to going live, review all residual risk summaries (from changes or projects) for acceptability of risk associated with interactions of recent or pending projects or changes

Table A.39 — CRCM.3 BP2

CRCM.3 BP2: Approve specified change. Approval is given for the specified change by the Medical IT-Network Risk Manager prior to go-live.	
Question:	Guidance:
CRCM.3 BP2 Q.1 Have the specified changes been approved prior to go-live?	Approval is given for the specified change by the Medical IT-Network Risk Manager prior to go-live.

Table A.40 — CRCM.3 BP3

CRCM.3 BP3: Document approval of residual risk. Document the approval of the Medical IT-Network residual risk in the Medical IT-Network risk management file.	
Question:	Guidance:
CRCM.3 BP3 Q.1 Is approval of residual risk documented?	Document the approval of the Medical IT-Network residual risk in the Medical IT-Network risk management file.

A.1.9 LNRM.1 Monitoring Process**Table A.41 — LNRM.1 BP1**

LNRM.1 BP1: Establish process outlining monitoring requirements. Establish a process which outlines the monitoring requirements as part of the risk management plan to monitor each installed Medical IT-Network.	
Question:	Guidance:
LNRM.1 BP1 Q.1 Has a process for monitoring of the live network been established?	Establish a process which outlines the monitoring requirements as part of the risk management plan to monitor each installed Medical IT-Network for emerging risks, effectiveness of risk control measures, and accuracy of original estimations of risk.
Technical Report:	Section:
IEC 80001-2-3	7.2 Network and application management

Table A.42 — LNRM.1 BP2

LNRM.1 BP2: Include monitoring requirements as part of the risk management plan.	
Question:	Guidance:
LNRM.1 BP2 Q.1 Are requirements for monitoring included in the risk management plan?	Include monitoring requirements as part of the risk management plan. Examples of what to monitor are the following: — environment changes (including local/connected environment as well as relevant network or component DATA AND SYSTEMS SECURITY vulnerabilities); — operational/performance feedback, e.g. user feedback, speed problems, high error rates, failure, malicious software attacks; — information about the incorporated components; — information about similar medical IT-networks; — reported events; — auditing of non-technical risk control measures such as organizational policies and procedures.

Table A.43 — LNRM.1 BP3

LNRM.1 BP3: Initiate Event Management process. Initiate the Event Management process where monitoring indicates actual or potential increase in risk.	
Question:	Guidance:
LNRM.1 BP3 Q.1 Has event management process been initiated where monitoring indicates actual or potential increase in risk?	Initiate the Event Management process where monitoring indicates actual or potential increase in risk associated with the medical IT-network or its components (potential or actual negative impact). Significant findings shall be reported to the appropriate party in the responsible organization. In some cases, the responsible organization might be required to report observations to regulatory bodies.

A.1.10 LNRM.2 Event Management Process

Table A.44 — LNRM.2 BP.1

LNRM.2 BP1: Establish Event Management Process. Establish Event Management process to ensure that negative events are captured and documented.	
Question:	Guidance:
LNRM.2 BP1 Q.1 Has an event management process been established?	Establish Event Management process to ensure that negative events are captured and documented.
LNRM.2 BP1 Q.2 Are negative events captured and documented?	

Table A.45 — LNRM.2 BP.2

LNRM.2 BP2: Evaluate events and proposed changes arising from events. Evaluate events and proposed changes arising from events.	
Question:	Guidance:
LNRM.2 BP2 Q.1 Are events and proposed changes arising from events evaluated?	Evaluate events and proposed changes arising from events as appropriate through the Change Release Management Process.

Table A.46 — LNRM.2 BP.3

LNRM.2 BP3: Manage proposed changes. Manage proposed changes through the change-release management process.	
Question:	Guidance:
LNRM.2 BP3 Q.1 Are post event proposed changes managed through the change-release management process?	Manage proposed changes through the change-release management process.

Table A.47 — LNRM.2 BP.4

LNRM.2 BP4: Track corrective and preventive actions. Track all corrective and preventive actions leading to closure.	
Question:	Guidance:
LNRM.2 BP4 Q.1 Are corrective and preventive actions tracked to closure?	Track all corrective and preventive actions leading to closure.

Table A.48 — LNRM.2 BP.5

LNRM.2 BP5: Report significant finds. Report significant finds to the medical IT-network risk manager and/or others in the responsible organization.	
Question:	Guidance:
LNRM.2 BP5 Q.1 Are significant finds reported?	Report significant finds to the medical IT-network risk manager and/or others in the responsible organization.

A.1.11 MDP.1 Medical IT-Network Planning Process**Table A.49 — MDP.1 BP.1**

MDP.1 BP1: Establish Risk Management plan. Establish risk management plan for each Medical IT-Network for risk management activities.	
Question:	Guidance:
MDP.1 BP1 Q.1 Has a risk management plan been established for each Medical IT-Network?	Establish risk management plan for each Medical IT-Network for risk management activities. The risk management plan shall include the following: — a description of the medical IT-network, including: — identified stakeholders within the responsible organization that shall be informed about hazards to ensure their risk awareness; — the defined use and expected benefits of the medical IT-network; — the reason for each medical device incorporation; — the use of each medical device, due to its incorporation into the medical IT-network that is not included in the manufacturer's intended use; — a description of activities, roles, and responsibilities for all parties involved in operating/maintaining the medical IT-network, with respect to risk management.; — requirements for monitoring the medical IT-network, criteria for risk acceptability, based on the responsible organization's policy for determining acceptable risk, including criteria for accepting risks when the probability of occurrence of harm cannot be estimated.
Technical Report:	Section:
IEC 80001-2-3	5 Wireless MEDICAL IT-NETWORKS: planning and design

Table A.50 — MDP.1 BP.2

MDP.1 BP2: Plan risk management. Plan risk management activities considering the current state of the IT network and planned changes.	
Question:	Guidance:
MDP.1 BP2 Q.1 Has risk management been planned considering the current state of the IT network and planned changes?	Plan risk management activities considering the current state of the IT network and planned changes. The responsible organization shall plan risk management of the medical IT-network by providing — risk-relevant asset description, — IT-network documentation, and — a risk management plan for the medical IT-network. Assessment and documentation of the structure of the network is essential to provide the necessary information for risk analysis and risk evaluation. Because of the nature of IT-networks, both the current state of the IT-network and planned changes shall be considered.

Table A.50 (continued)

Technical Report:	Section:
IEC 80001-2-3	All Sections
IEC 80001-2-4	5.4.3 Development status 5.4.3 of MEDICAL IT-NETWORK

Table A.51 — MDP.1 BP.3

MDP.1 BP3: Initiate project. Initiate a project for the development of a new Medical IT-Network or for changes which are not covered by documented change permits.	
Question:	Guidance:
MDP.1 BP3 Q.1 Has a project been initiated for the development of a new Medical IT-Network or for changes which are not covered by documented change permits?	Initiate a project for the development of a new Medical IT-Network or for changes which are not covered by documented change permits. Initial development of new medical IT-networks as well as changes to existing medical IT-networks not covered by documented change permits shall be managed by projects. A medical IT-network can have multiple concurrent or sequential projects.
Technical Report:	Section:
IEC 80001-2-3	All Sections
IEC 80001-2-4	4.3 Large RESPONSIBLE ORGANIZATION — points to consider
IEC 80001-2-4	5.4.1 Performing a RISK ASSESSMENT

Table A.52 — MDP.1 BP.4

MDP.1 BP4: Maintain and update risk management plan. Risk Management plan is maintained and updated when a project introduces changes to an existing Medical IT-Network.	
Question:	Guidance:
MDP.1 BP4 Q.1 Has the risk management plan been maintained and updated when a project changes an existing Medical IT-Network?	Risk Management plan is maintained and updated when a project introduces changes to an existing Medical IT-Network.

Table A.53 — MDP.1 BP.5

MDP.1 BP5: Establish document control procedure.	
Question:	Guidance:
MDP.1 BP5 Q.1 Has a document control procedure been established?	Establish document control procedure.

Table A.54 — MDP.1 BP.6

MDP.1 BP6: Maintain documents as per the document control procedure. Revise, amend, review, and approve all relevant documents in the medical IT-network life cycle in accordance with the document control procedure.	
Question:	Guidance:
MDP.1 BP6 Q.1 Are documents maintained and approved as per the document control procedure?	Revise, amend, review, and approve all relevant documents in the medical IT-network life cycle in accordance with the document control procedure.

Table A.55 — MDP.1 BP.7

MDP.1 BP7: Provide traceability for each identified hazard. Provide traceability for each identified hazard within the Medical IT-Network risk management file.	
Question:	Guidance:
MDP.1 BP7 Q.1 Has traceability been provided for each identified hazard?	Provide traceability for each identified hazard within the Medical IT-Network risk management file. The medical IT-network risk management file shall provide traceability for each identified hazard to the following: — the risk analysis; — the risk evaluation; — the implementation and verification of the risk control measures; — the assessment of the acceptability of any residual risk(s) with approval. The records and other documents that make up the medical IT-network risk management file can form part of other documents and files. The medical IT-network risk management file need not physically contain all the records and other documents; however, it should contain at least references or pointers to all required documentation. The responsible organization should be able to assemble the information referenced in the medical IT-network risk management file in a timely fashion. The medical IT-network risk management file can be in any form or type of medium. In those organizations where an “assurance case” is the means of organizing the medical IT-network risk management file, refer to ISO/IEC 15026-2 (under development) for more information.

A.1.12 MDP.2 Medical IT-Network Documentation Process

Table A.56 — MDP.2 BP.1

MDP.2 BP1: Obtain/Provide additional documentation for the connection of a medical device to an IT network. Obtain (Responsible organization)/Provide (medical device manufacturer) instructions for implementing the connection of a medical device to an IT network.	
Question:	Guidance:
MDP.2 BP1 Q.1 Has additional documentation for the connection of a medical device to an IT network been provided?	Obtain instructions for implementing the connection of a medical device to an IT network. The Responsible organization shall ensure that the medical device manufacturer shall make available, instructions for implementing such connection, including but not limited to the following: — the purpose of the medical device's connection to an IT-network; — the required characteristics for the IT-network incorporating the medical device; — the required configuration of the IT-network incorporating the medical device; — the technical specifications of the network connection of the medical device including security specifications; — the intended information flow between the medical device, the medical IT-network and other devices on the medical IT-network and, if relevant to the key properties, the intended routing through the medical IT-network; — a list of the hazardous situations resulting from a failure of the IT-network to provide the characteristics required to meet the purpose of the medical device connection to the IT-network. Compliance is checked by availability of the medical device manufacturer's accompanying documents and other available instructions for implementing such connection. Where the content made available does not meet the responsible organization's risk management need, additional content can be made available under a responsibility agreement. Pursuant to applicable regulations and relevant standards, the responsible organization shall ensure that each provider of other information technology (equipment and/or software) shall make available documentary information applicable to the technology being supplied as follows: — technical descriptions and technical manuals; — required IT-network characteristics; — recommended product configurations; — known incompatibilities and restrictions; — operating requirements; — product corrective actions and recalls; — cyber security notices (warnings of known security vulnerabilities). Compliance is checked by confirming the availability of the documentary information from each provider of other information technology. Where the content made available does not meet the responsible organization's risk management need, additional content can be made available under a responsibility agreement. The responsible organization shall obtain supplementary documentary information for other information technology as necessary to further support the risk management activities of the medical IT-network.

Table A.56 (continued)

	Examples of supplementary information are the following: — test strategies and test acceptance criteria; — disclosure of failure modes; — system reliability statistics; — safety assurance cases; — performance
--	---

Table A.57 — MDP.2 BP.2

MDP.2 BP2: Maintain accompanying documents in the Medical IT-Network risk management file. Maintain documents and additional documentation (obtained for a medical device incorporated into an IT network) as required for risk management purposes in the Medical IT-Network Risk Management file.	
Question:	Guidance:
MDP.2 BP2 Q.1 Are accompanying documents maintained in the Medical IT-Network Risk Management File?	Maintain documents and additional documentation (obtained for a medical device incorporated into an IT network) as required for risk management purposes in the Medical IT-Network Risk Management file.

Table A.58 — MDP.2 BP.3

MDP.2 BP3: Maintain risk relevant asset description. Maintain risk relevant asset description, including a list of assets of IT networks interfacing with medical devices, as part of the risk management process.	
Question:	Guidance:
MDP.2 BP3 Q.1 Has a risk relevant asset description been maintained?	Maintain risk relevant asset description, including a list of assets of IT networks interfacing with medical devices, as part of the risk management process. The responsible organization shall plan risk management of the medical IT-network by providing a risk-relevant asset description. Typical assets include, but are not limited to hardware, software, and data essential to the intended use of the medical device and the defined use of the medical IT-network. The asset list may include for example: — specific components of the medical IT-network and all incorporated medical devices and other equipment (e.g. image creating modalities, network components) of the IT infrastructure; — operational characteristics of the IT infrastructure of the medical IT-network (e.g. performance properties such as bandwidth); — configuration management information; — medical application software; — data about configuration of hardware and software; — characterization of identifiable patient data on the medical IT-network or used by the incorporated medical device including its nature, volume, and sensitivity; — healthcare procedure support information, including history of use and operator/user details; and — a security description and other materials relevant to total system safety considerations (in case security is an aspect of safety).

Table A.58 (continued)

	The responsible organization shall establish and maintain network documentation necessary to support the risk management of the medical IT-network for the interfaces between the medical device(s) and all network components (both software and hardware). This documentation shall include but not be limited to: — physical and logical network configuration; The network configuration includes defining the boundaries of the network. Documentation can contain IT-Network electrical properties that might impact the performance of the Medical IT-network and incorporated devices. Examples include, but are not limited to, grounding, galvanic (de)coupling, stray currents, and power over Ethernet. — applied standards and conformance statements; — physical and logical client/server structure; — network security, reliability and data integrity; — network communication requirements for each medical device as specified by the manufacturer; and — future (planned/reasonably foreseeable) changes/upgrades/enhancements.
Technical Report:	Section:
IEC 80001-2-4	5.4.2.1 Understanding of the components of the MEDICAL IT-NETWORK
IEC 80001-2-4	5.4.2.2 Small RESPONSIBLE ORGANIZATION — points to consider.

A.1.13 MDP.3 Responsibility Agreements Process

Table A.59 — MDP.3 BP.1

MDP.3 BP1: Determine the need for a responsibility agreement. Determine the need for one or more documented responsibility agreements whenever a medical device is incorporated into an IT network or the configuration of such a connection is changed.	
Question:	Guidance:
MDP.3 BP1 Q.1 Has the need for a responsibility agreement(s) been determined?	Determine the need for one or more documented responsibility agreements whenever a medical device is incorporated into an IT network or the configuration of such a connection is changed.
Technical Report:	Section:
IEC 80001-2-3	8.12 External partnering with both MEDICAL DEVICE and networking manufacturer
IEC 80001-2-4	5.4.5 External IT and bio-medical engineering support
IEC 80001-2-4	6 RESPONSIBILITY AGREEMENTS

Table A.60 — MDP.3 BP.2

MDP.3 BP2: Define the responsibilities of stakeholders within the responsibility agreement.	
Question:	Guidance:
MDP.3 BP2 Q.1 Do the responsibility agreement(s) define the responsibilities of stakeholders?	Define the responsibilities of stakeholders within the responsibility agreement. A responsibility agreement may cover one or more projects or the maintenance of one or more medical IT-networks, and shall identify responsibility for all aspects of the medical IT-network life cycle and all activities that form part of that life cycle. The responsibility agreements shall contain (or refer to documents which contain) at a minimum: — the name of the person responsible for risk management for the activities covered by the responsibility agreement; — the scope of the activities covered by the responsibility agreement, including a summary of and/or reference to the requirements; — a list of the medical devices and other equipment which are to be incorporated into the IT-network or changed, together with the names of medical device manufacturers or other organizations responsible for the provision of technical information necessary for the completion of the project; — a list of documents to be supplied by the medical device manufacturers and other equipment suppliers that contain instructions for connection to or disconnection from an IT-network; — technical information to be supplied by the medical device or IT manufacturers and other equipment suppliers that is necessary to perform risk analysis for the IT-network; — definition of roles and responsibilities in managing potentially adverse events. The responsible organization shall provide a summary of responsibilities as appropriate. If the co-operation of manufacturers of medical devices, suppliers of other equipment, or other organizations is necessary in addition to the listed documents supplied by the manufacturers or organizations, a responsibility agreement shall: — identify the nature of the co-operation required; State: — Who is responsible for requesting such co-operation? — Who is responsible for responding to such requests? — What criteria will be used to judge the adequacy of such response? Since this information can change through the lifecycle of a medical IT-network, it is recommended that it be updated periodically in the responsibility agreement.
Technical Report:	Section:
IEC 80001-2-3	8.12 External partnering with both MEDICAL DEVICE and networking manufacturer
IEC 80001-2-4	5.4.5 External IT and bio-medical engineering support
IEC 80001-2-4	6 RESPONSIBILITY AGREEMENTS

Table A.61 — MDP.3 BP.3

MDP.3 BP3: Define the scope of the responsibility agreement. Define the scope of the responsibility agreement including whether the agreement applies to one or more project or the maintenance of one or more Medical IT-Networks. Compliance is checked by inspection of the Medical IT-Network risk management file.	
Question:	Guidance:
MDP.3 BP3 Q.1 Has the scope of the responsibility agreement(s) been defined and documented?	Define the scope of the responsibility agreement including whether the agreement applies to one or more project or the maintenance of one or more Medical IT-Networks. Compliance is checked by inspection of the Medical IT-Network risk management file.
Technical Report:	Section:
IEC 80001-2-3	8.12 External partnering with both MEDICAL DEVICE and networking manufacturer

A.1.14 MDP.4 Risk Management Policy Process**Table A.62 — MDP.4 BP.1**

MDP.4 BP1: Establish Risk Management Policy. Risk Management policy outlines criteria for determining acceptable risk, taking into account relevant international standards and national or regional regulations.	
Question:	Guidance:
MDP.4 BP1 Q.1 Has a risk management policy been established?	Top management ensure that a risk Management policy is established and that it outlines criteria for determining acceptable risk, taking into account relevant international standards and national or regional regulations.
Technical Report:	Section:
IEC 80001-2-4	1.4 Prerequisites
IEC 80001-2-4	4.1 TOP MANAGEMENT responsibilities
IEC 80001-2-4	4.3 Large RESPONSIBLE ORGANIZATION — points to consider

Table A.63 — MDP.4 BP.2

MDP.4 BP2: Document Risk Management Policy with the Medical IT-Network Risk Management file.	
Question:	Guidance:
MDP.4 BP2 Q.1 Has the risk management policy been documented with the Medical IT-Network Risk Management File?	Document Risk Management Policy within the Medical IT-Network Risk Management file.
Technical Report:	Section:
IEC 80001-2-4	1.4 Prerequisites
IEC 80001-2-4	4.1 TOP MANAGEMENT responsibilities
IEC 80001-2-4	4.3 Large RESPONSIBLE ORGANIZATION — points to consider

Table A.64 — MDP.4 BP.2

MDP.4 BP3: Design the risk management policy to balance the three key properties with the mission of the responsible organization.	
Question:	Guidance:
MDP.4 BP3 Q.1 Has the risk management policy been designed to balance the 3 key properties with the mission of the responsible organization?	Design the risk management policy to balance the three key properties with the mission of the responsible organization.
Technical Report:	Section:
IEC 80001-2-4	1.4 Prerequisites
IEC 80001-2-4	4.1 TOP MANAGEMENT responsibilities
IEC 80001-2-4	4.3 Large RESPONSIBLE ORGANIZATION — points to consider

Table A.65 — MDP.4 BP.4

MDP.4 BP4: Include description of or reference to processes applying to Medical IT-Networks. Include description of or reference to processes applying to Medical IT-Networks (including at least Event Management, Change — Release Management, Configuration Management and Monitoring).	
Question:	Guidance:
MDP.4 BP4 Q.1 Does the risk management policy include description of or reference to processes applying to Medical IT-Networks?	Description of or reference to processes applying to Medical IT-Networks to include: Event Management, Change — Release Management, Configuration Management and Monitoring. Medical IT-network life cycle activities can be captured in an IT service management policy (e.g. per ISO/IEC 20000) provided there is a clear relationship to the risk management policy. The policy shall be expressed in terms that can be interpreted throughout all risk management activities.
Technical Report:	Section:
IEC 8001-2-4	5.3 Establish underlying RISK framework

A.1.15 MDP.5 Organizational Risk Management Process

Table A.66 — MDP.5 BP.1

MDP.5 BP1: Establish and maintain Risk Management Process. Establish and maintain a risk management process which takes into account the defined use of the medical IT-network.	
Question:	Guidance:
MDP.5 BP1 Q.1 Has a risk management process been established and maintained which takes into account the defined use of the medical IT-network?	Establish and maintain a risk management process for identifying hazards, estimating and evaluating the associated risks, controlling these risks, and monitoring the effectiveness of the risk controls, which takes into account the defined use of the medical IT-network. Subsequent changes to the medical IT-network could introduce new risks and require additional analyses
Technical Report:	Section:
IEC 80001-2-4	5.2 Determine the clinical context within which the healthcare provision is made
IEC 80001-2-4	5.4 Determining and understanding a MEDICAL IT-NETWORK

Table A.67 — MDP.5 BP.2

MDP.5 BP2: Execute Risk Management Process in line with Risk Management Policy. Medical IT-Network risk Manager executes the risk management process in line with the risk management policy.	
Question:	Guidance:
MDP.5 BP2 Q.1 Is the risk management process executed in line with the risk management policy?	Medical IT-Network risk Manager shall supervise the execution of the risk management process in line with the risk management policy to maintain the key properties of the medical IT-network. The medical IT-network risk manager shall be responsible for the performance of the risk management process. This includes but is not limited to responsibility for — collection of all risk-relevant information on the medical devices, — planning the incorporation of the medical devices in accordance with the instructions provided by the various medical device manufacturers and the policies of the responsible organization, — the performance of the risk management process whenever a medical device is added to an IT-network, — the performance of the risk management process whenever an incorporated medical device or the medical IT-network is changed, — authorization to proceed with go-live following a change to the medical IT-network, — informing the responsible organization about unacceptable risk related to the medical IT-network and the associated hazards arising from any changes in configuration, and — monitoring all medical IT-network projects or changes to the medical IT-network for which the medical IT-network risk manager is responsible. These tasks may be delegated, but the medical IT-network risk manager remains responsible for ensuring their adequate performance.

Table A.68 — MDP.5 BP.3

MDP.5 BP3: Report on performance of Risk Management Process. Report (made by Medical IT-Network Risk Manager) on the performance of the risk management process to Top management.	
Question:	Guidance:
MDP.5 BP3 Q.1 Is the performance of the risk management process reported to Top management?	Report (made by Medical IT-Network Risk Manager) on the performance of the risk management process to Top management.

Table A.69 — MDP.5 BP.4

MDP.5 BP.4: Manage communications. Manage communications (made by Medical IT-Network Risk Manager) between internal and external participants in risk management.	
Question:	Guidance:
MDP.5 BP.4 Q.1 Are communications managed?	Manage communications (made by Medical IT-Network Risk Manager) between internal and external participants in risk management. Such participants may include, as appropriate — medical device manufacturers, — other suppliers of IT equipment, software and services, — internal IT function and other facilities management functions, — clinical users, and — technical support function responsible for medical devices (for example bio-medical engineering).

A.2 Exemplar Assessment Documentation

A.2.1 General

This Annex provides sample templates which can be used during the assessment process. The text in italics shows sample text or gives further details of the information that should be recorded in the relevant fields. The templates serve as an example of the format that the documentation may take and can be tailored for use as required by the specific context of the HDO. The templates in this Annex can be used for either an assessment of conformance or an assessment of the capability level of the risk management processes.

A.2.2 Assessment Details

This template can be used during Stages 1 and 2 of the assessment process as described in 4.3.1 and 4.3.2 to define the assessment scope and to record the risk management stakeholders and their responsibilities during the assessment.

Table A.70 — Assessment Details Template

Document ID: <i>(as per the document management policy)</i>			
Department:	<i>Name</i>	Project	<i>(as per the assessment scope)</i>
Top Manager:	<i>Name</i>	Status:	<i>e.g. Initial Draft</i>
Medical IT Network Risk Manager	<i>Name</i>	Version:	<i>e.g. v0.1</i>
Assessor(s)	<i>(defining lead assessor if required)</i>	Date:	<i>Date</i>
Assessment Scope:			
<i>Details of the assessment scope such as the project or medical IT network which is to be in scope for the assessment, the processes which are being assessed, whether the focus of the assessment is to assess conformance or is to assess the capability levels of the processes, whether this is an assessment or reassessment.</i>			
Risk Management Stakeholder(s):	Role:	Responsibilities:	
<i>Name</i>	<i>Description of risk management role within the HDO</i>	<i>Description of responsibilities during the assessment process</i>	

A.2.3 Assessment Interview Template

The template provided in this subclause can be used for group or individual interviews which are performed during stage 3 of the assessment process. The template can be used for group or individual interviews to record participant responses to the assessment questions provided in [A.1](#) and should include or make reference to the information collected in relation to assessment details in [A.2.2](#).

Table A.71 — Assessment Interview Template

Participant(s):	<i>Name</i>	Date:	<i>Date</i>
Question:	Response Summary:	Work Product Inspection:	Rating:
<i>e.g. MRM.1 BP1 Q.1</i>	<i>Summary of information collected during the interview to identify strengths and weaknesses in the current risk management processes.</i>	<i>Summary of work products which have been reviewed as part of the assessment process including a summary of any strengths and weaknesses which have been identified</i>	<i>Rating of the relevant base practice by the assessor based on the information collected during interviews and through inspection of work products. The rating should use the process attribute rating scale which is defined in 4.4.2</i>

A.2.4 Findings Report

This template can be used to draft the findings report which is prepared during stage 5 of the assessment process and presented during stage 6 of the assessment process. The findings report can be used as a basis for the development of an improvement plan if required (stage 6 of the assessment process). The findings report can be used to determine the need for and to inform the scope of a reassessment (if required as part of assessment stage 7). The findings report contains two sections. The first section provides a summary of assessment results (based on either conformance or capability level) for each of the 14 processes. Each of the processes are described both in terms of conformance capability and a summary of the assessment findings highlighting strengths and weaknesses in the current risk management processes. The overall summary is a synopsis of the weaknesses highlighted during the assessment. The second section provides details assessment findings and highlights the recommended steps to be taken to improve risk management processes based on the weaknesses identified for each of the processes assessed.

The findings report should include or make reference to the information collected in relation to assessment details in [A.2.2](#).

Table A.72 — Findings Report Template

Overall Assessment Summary:			
Process ID:		Conformant:	Capability Level:
MRM.1		Yes/No (Capability Level 1) Summary:	Capability Level Upper than 1 (if applicable)
Assessment Findings:			
Process ID:	Recommendations:	Owner:	Target Date:
MRM.1	Description of steps which are to be taken to improve risk management processes to achieve conformance or to achieve a higher capability level. Recommendations are based on the information collected during stage 3 of the assessment and may be presented based on individual base practices or may summarize recommendations related to a specific process based on a review of all base practices (and a review of the relevant work products).	Risk Management stakeholder tasked with ensuring that identified recommendations are implemented (if required as part of stage 6 of the assessment process).	Date by which recommendations are scheduled to be implemented (if required as part of stage 6 of the assessment process).

Annex B (informative)

Process Reference Model

B.1 General

The purpose of this Annex is to describe a PRM that facilitates the development of a PAM to assess against IEC 80001-1. The PAM is described in [Annex C](#).

ISO/IEC 15504-2 describes the requirements for the conduct of an assessment and a measurement scale for assessing process capability. ISO/IEC 15504-1 describes the concepts and terminology used for process assessment. ISO/IEC TR 24774 provides guidelines for process description. These standards have been used to inform the development of both the PRM and PAM.

This PRM is a logical representation of the elements of the processes within the risk management process for the incorporation of medical devices into IT-Networks. Using the PRM in a practical application might require additional elements suited to the environment and circumstances. The PRM specified in this part of ISO/TR 80001 describes at an abstract level the processes including the general risk management (RM) processes implied by IEC 80001-1. Each process of this PRM is described in terms of a purpose and outcomes. The PRM does not attempt to place the processes in any specific environment nor does it pre-determine any level of process capability required to fulfil the IEC 80001-1 requirements. The PRM is not intended to be used for a conformity assessment auditor process implementation reference guide.

Any organization can define processes for its specific environment and circumstances for a PRM. The purposes and outcomes of each process described in this part of ISO/TR 80001 are, however, considered to be the minimum necessary to meet IEC 80001-1 requirements in relation to each process. The 14 processes in the PRM have been identified in order to give coverage to all the requirements of IEC 80001-1.

The PRM does not provide the evidence required by ISO/IEC 80001-1. The PRM does not specify the interfaces between the processes.

[B.2](#) provides an overview of the PRM. [B.3](#) provides a description of the risk management processes for IT networks incorporating medical devices. [B.4](#) provides a statement of conformity for this PRM in accordance with ISO/IEC 15504-2.

B.2 Overview of the Process Reference Model

B.2.1 General

This Clause describes the structure of the PRM in the context of risk management of IT-Networks incorporating Medical Devices to address Safety, Effectiveness, and Data and System Security.

[Figure B.1](#) identifies the processes derived from IEC 80001-1 requirements, which are included in this PRM for Application of Risk Management for IT-Networks Incorporating Medical Devices.

Figure B.1 — Processes in the Process Reference Model

B.2.2 Process Descriptions

Each process in the PRM has the following descriptive elements:

Name: the name of a process is a short noun phrase that summarizes the scope of the process, identifying the principal concern of the process, and distinguishes it from other processes within the scope of the PRM.

Context: for each process a brief overview describes the intended context of the application of the process.

Purpose: the purpose of the process is a high level, overall goal for performing the process.

Outcomes: an outcome is an observable result of the successful achievement of the process purpose. Outcomes are measurable, tangible, technical, or business results that are achieved by a process. Outcomes are observable and assessable.

Requirements traceability: the outcomes are based on the requirements of IEC 80001-1. The references identify the applicable subclauses of IEC 80001-1, the subclause heading, and the outcomes that are supported.

In [B.3](#) ([B.3.1](#) to [B.3.14](#)), all entries in the requirements traceability row end with a reference to a numbered outcome in square brackets, (i.e. [Outcome: n]) which are directly linked to the requirements of IEC 80001-1. The referencing is illustrated by the example given below.

EXAMPLE The first requirements traceability entry in [B.3.1](#):

IEC 80001-1, 3.1 Roles and Responsibilities — General [1]

The [1] is a reference to outcome 1 in the previous row of [B.3.1](#).

Outcome 1 is: A Medical IT-Network Risk Management file is established and maintained containing all required documentation.

B.3 Process Descriptions

B.3.1 MRM.1 Medical IT-Network Risk Management Process

Name:	Medical IT-Network Risk Management Process
Process ID:	MRM.1
Context:	The responsible organization is the owner of the risk management process for the medical IT-network and ensures the provision of adequate resources and ensuring the assignment of qualified personnel for management, performance of work and assessment activities; reviewing the results of risk management activities, including event management, at defined intervals to ensure the continuing suitability and the effectiveness of the risk management process. Top management appoint a medical IT-network risk manager, who has the necessary qualifications, knowledge and competence for risk management applied to medical IT-networks. Top management identify the people responsible for the risk management tasks and ensure that they co-operate with the medical IT-network risk manager:
Purpose:	The purpose of the Medical IT-Network process is to gather, analyse, assess, and store information spanning planning, design, installation, device connection, configuration, use/operation, maintenance, and device decommissioning for lifecycle management of Medical Devices incorporated in IT-Networks.
Outcomes:	As a result of the successful implementation of the Medical IT-Network Risk Management Process: 1. A Medical IT-Network Risk Management file is established and maintained containing all required documentation. 2. Adequate appropriately qualified resources for management, performance of work, and assessment activities are assigned. 3. The results of risk management activities, including event management, are reviewed at defined intervals. 4. A qualified medical IT-network risk manager is appointed. 5. People responsible for Risk Management activities and lifecycle management (including procurement and maintenance) of medical devices incorporated into IT networks, co-operate with the medical IT-network risk manager. 6. Risk management process for medical IT-networks includes the participation of management responsible for life cycle management of Medical IT-Networks, general IT activities and the use of Medical Devices. 7. All supervision, operation, installation, and maintenance of Medical IT-Network(s) throughout the life cycle are made according to the Risk Management plan and follow the results of the IT-Network Risk Management Process. 8. All parties performing supervision, operation, installation, service, troubleshooting, and maintenance of Medical IT-Network(s) are adequately informed about their responsibility according to this standard, including their responsibility for maintaining the effectiveness of Risk Controls. 9. The key properties of the medical IT-network are maintained throughout the life cycle. 10. The risk management activities of risk analysis, risk evaluation, risk control, residual risk evaluation, and reporting and approval are documented.

Requirements traceability:	IEC 80001-1, 3.1	Roles and Responsibilities — General [1]
	IEC 80001-1, 3.3, (c)	Top management Responsibilities [2]
	IEC 80001-1, 3.3, (d)	Top management Responsibilities [2]
	IEC 80001-1, 3.3, (e)	Top management Responsibilities [3]
	IEC 80001-1, 3.3.	Top management Responsibilities [4]
	IEC 80001-1, 3.3, (f, g, i, j)	Top management Responsibilities [5]
	IEC 80001-1, 3.3, (k, m, n, o)	Top management Responsibilities [6]
	IEC 80001-1, 3.3, (p)	Top management Responsibilities [7]
	IEC 80001-1, 3.3, (q)	Top management Responsibilities [8]
	IEC 80001-1, 4	Life Cycle Risk Management in Medical IT-Networks Overview [9]
	IEC 80001-1, 4.4.1	Medical IT-Network Risk Management — Overview [10]

B.3.2 MRM.1.1 Risk Analysis and Evaluation Process

Name:	Risk Analysis and Evaluation	
Process ID:	MRM.1.1	
Context:	This process allows the Responsible Organization to identify risks related to the incorporation of medical devices into an IT network. Once these risks have been identified, the process allows the Responsible Organization to analyse and evaluate the risks throughout the life cycle. The risk evaluation process is based on the risks identified during the risk analysis phase.	
Purpose:	The purpose of the Risk Analysis process is to identify, analyse, and evaluate risk related to the incorporation of Medical Device into IT Networks.	
Outcomes:	As a result of the successful implementation of the Risk Analysis process: 1. Hazards that are likely to arise from the medical IT-network are identified. 2. For each identified hazard, the associated risks are estimated, analysed and evaluated using available information or data throughout the lifecycle. 3. Possible consequences of harm (where probability of occurrence cannot be estimated) are listed for use in risk control. 4. The results of these activities are recorded in the medical IT-network risk management file. 5. Where the estimated risk(s) is so low that risk reduction need not to be pursued, the rationale for this decision is documented in the medical IT-network risk management file.	
Requirements traceability:	IEC 80001-1, 4.4.2	Risk Analysis [1, 2, 3, 4]
	IEC 80001-1, 4.4.3, (a)	Risk Evaluation [2, 5]
	IEC 80001-1, 4.4.3, (b)	Risk Evaluation [2]

B.3.3 MRM.1.2 Risk Control Process

Name:	Risk Control Process
Process ID:	MRM.1.2
Context:	Having completed the risk analysis and risk evaluation, the risk control process implements risk control measures until the residual risk is judged to be of an acceptable level.
Purpose:	The purpose of the Risk Control Process is to implement risk control measures until the residual risk is judged to be of an acceptable level.

Outcomes:	As a result of the successful implementation of the Risk Control process: 1. Proposed risk control measures are identified and documented for each unacceptable risk. 2. Risk control options are used in the following order: inherent control by design; protective measures; information for assurance. 3. Key properties are considered in the following order of priority — safety, effectiveness, and data and systems security — when considering risk control options. 4. A risk/benefit analysis of the residual risk is conducted and documented when the required risk reduction has been determined not to be practical. 5. Risk control measures that require a change to the medical IT-network are managed under the change-release management process. 6. Selected risk control measures are recorded in the medical IT-network risk management file. 7. Where the estimated risk(s) are not acceptable, selected risk control measures are implemented according to risk control option analysis. 8. If a change is undertaken without documented consent of the medical device manufacturer, the manufacturer is notified and all necessary regulatory steps for putting such a modified medical device into service are followed. (Changes to a medical device without documented consent of the medical device manufacturer are NOT recommended). 9. Any residual risk is documented in the medical IT-network risk management file. 10. Implementation and effectiveness of all risk control measures in the operational system are verified and documented in the medical IT-network risk management file. 11. The implemented risk control measures and the installed operational system are reviewed for new, unacceptable risks and the evaluation is documented in the Medical IT-Network risk management file.	
Requirements traceability:	IEC 80001-1, 4.4.4.1, (a, b, c)	Risk Control Option Analysis [1, 2]
	IEC 80001-1, 4.4.4.1	Risk Control Option Analysis [3, 4]
	IEC 80001-1, 4.4.4.2	Risk Control Measures [5, 6]
	IEC 80001-1, 4.4.4.3	Implementation of Risk Control Measures [7, 8, 9]
	IEC 80001-1, 4.4.4.4	Verification of Risk Control Measures [10]
	IEC 80001-1, 4.4.4.5	New Risks arising from Risk Control [11]

B.3.4 MRM.1.3 Residual Risk Process

Name:	Residual Risk Process
Process ID:	MRM.1.3
Context:	Once risk control measures have been implemented, residual risk is reviewed and additional risk control measures applied if necessary. Residual risks are documented and where additional risk control measures are not practical, a risk/benefit analysis is carried out and documented.
Purpose:	The purpose of the Residual Risk Process is to ensure that residual risk is documented and a risk benefit analysis is conducted to decide whether to accept the residual risk.

Outcomes:	As a result of the successful implementation of the Residual Risk Process 1. Persons responsible for reviewing and accepting residual risk have co-operated with Medical IT-Network Risk Manager. 2. Residual risk is evaluated based on a pre-release assessment of the effectiveness of the implemented risk control measures. 3. Individual residual risks and the overall residual risk are assessed for acceptability. 4. Additional risk control measures are applied where an individual residual risk or the overall residual risk is not determined to be acceptable. 5. A residual risk summary is defined and documented. 6. The decision to approve the residual risk is made on the basis of a documented risk/benefit analysis of the individual or overall residual risk against the health benefit accrued (where the reduction of residual risk to an acceptable level is not practicable).
Requirements traceability:	IEC 80001-1, 3.3 Top management Responsibilities [1] IEC 80001-1, 4.4.5 Residual Risk Evaluating and Reporting [2, 3, 4, 5, 6]

B.3.5 CRCM.1 Change Release and Configuration Management Process

Name:	Change Release and Configuration Management Process
Process ID:	CRCM.1
Context:	The Change Release process ensures that a documented change release process is in place and that the process includes risk management activities. In addition to this a configuration management, process shall also be in place.
Purpose:	The purpose of the Change Release and Configuration Management process is to ensure that a documented Change Release Process is in place and that risk management activities take place during the Change Release. Acceptability of the change is based on the results of the Risk Management activities as part of the Change Release process. All changes to the system shall be reflected in the Configuration Management process.
Outcomes:	As a result of the successful implementation of the Change Release Process: 1. Current Configuration Management information for the medical IT-Network is contained in the Risk Management file. 2. Action plans arising from risk assessment follow the change-release management process. 3. A Change Release policy (including Risk Management) is documented and applied. 4. The results of the risk management process are used to determine approval and acceptability of changes during the change-release management process. 5. A configuration management policy is documented and applied during risk management of the change release management.
Requirements traceability:	IEC 80001-1, 3.1 Roles and Responsibilities — General [1] IEC 80001-1, 4.4.1 Medical IT-Network Risk Management — Overview [2] IEC 80001-1, 4.5.1 Change Release Management Process [3, 4, 5]

B.3.6 CRCM.2 Decision on how to apply Risk Management Process

Name:	Decision on how to apply Risk Management
Process ID:	CRCM.2
Context:	This process allows the responsible organization to consider the nature of the change and decide whether the change should be implemented as a change permit or whether the change should be implemented through the initiation of a Medical IT-Network project.

Name:	Decision on how to apply Risk Management	
Purpose:	The purpose of the Decision on how to apply Risk Management process is to ensure that a policy is in place to allow organizations to consider the nature of the change that is required to the Medical IT-Network and assess if the change should be carried out under a change permit or by initiating a Medical IT-Network project.	
Outcomes:	As a result of the successful implementation of the Decision on the Application of Risk Management Process: 1. The change-release management process is initiated for any new medical IT-network or a change to an existing medical IT-Network. 2. The nature of the change is considered to decide whether the requirements are met by an applicable change permit and if not, a medical IT-network project is initiated. 3. A routine change is performed once a change permit is defined and constraints are specified. 4. Change permits specify what records are to be kept for each permitted change. 5. Change permits are maintained in the medical IT-network risk management file. 6. A project plan is established and maintained for specific circumstances that have the potential to introduce new risk. 7. The project plan is revised whenever necessary to reflect changes to the project. 8. The project plan is kept in the medical IT-network Risk Management File.	
Requirements traceability:	IEC 80001-1, 4.5.2.1	Decision on how to apply Risk Management — Overview [1, 2]
	IEC 80001-1, 4.5.2.2	Decision on how to apply Risk Management — Change Permits [3, 4, 5]
	IEC 80001-1, 4.5.2.3	Decision on how to apply Risk Management — Medical IT-Network Projects [6, 7, 8]

B.3.7 CRCM.3 Go-Live Process

Name:	Go-Live	
Process ID:	CRCM.3	
Context:	This process allows the responsible organization to manage the Go-Live Phase of the project and to consider the decision to go live in terms of the residual risk.	
Purpose:	The purpose of the Go-Live Process is to allow the responsible organization to manage the transition of the IT network to the live environment and to allow the responsible organization to manage the risk management activities associated with the Go-Live phase of the project.	
Outcomes:	As a result of the successful implementation of Go-Live Process: 1. Medical IT-network residual risk is reviewed prior to going live. 2. Residual risk summaries are reviewed for acceptability of risks associated with interactions of recent or pending projects or changes. 3. The specified change to the medical IT-network is approved prior to go-live by the medical IT-network risk manager. 4. The approval of the medical-IT network residual risk is documented in the medical IT-network risk management file.	
Requirements traceability:	IEC 80001-1, 4.5.3	Go-Live [1, 2, 3, 4]

B.3.8 LNRM.1 Monitoring Process

Name:	Monitoring Process
Process ID:	LNRM.1

Context:	Once the medical IT-network has been deployed to the live environment, this process allows for the network to be monitored during the operational phase.
Purpose:	The purpose of the process is to allow the successful monitoring of the medical IT-network during the operational phase and to establish requirements for monitoring to be established as part of the risk management plan of the medical IT-network. This allows the network to be monitored for emerging risks, effectiveness of risk control measures, and accuracy of original estimations of risk.
Outcomes:	As a result of the successful implementation of Monitoring Process: 1. A process outlining monitoring requirements is established as part of the risk management plan to monitor each installed medical IT-network. 2. Requirements for monitoring are established as part of the risk management plan of the medical IT-network. 3. Event Management process is initiated where monitoring indicates actual or potential increase in risk.
Requirements traceability:	IEC 80001-1, 4.6.1 Monitoring [1, 2, 3]

B.3.9 LNRM.2 Event Management Process

Name:	Event Management Process		
Process ID:	LNRM.2		
Context:	During the operational phase of the Medical IT-Network, if a negative event occurs, this is dealt with under the event management process.		
Purpose:	The purpose of the Event Management process is to allow the responsible organization to manage events which have a negative impact on the medical IT-network. Required changes are managed through the Change Release Process and events are tracked to closure.		
Outcomes:	As a result of the successful implementation of the Event Management Process: 1. Event management policy is established to ensure negative events are captured and documented. 2. Events are evaluated and proposed changes as appropriate are managed through change-release management process. 3. All corrective and preventive actions leading to closure are tracked. 4. Significant finds are reported to the medical IT-network risk manager and/or others in the responsible organization.		
Requirements traceability:	IEC 80001-1, 4.6.2, (a)	Event Management	[1]
	IEC 80001-1, 4.6.2, (b)	Event Management	[2]
	IEC 80001-1, 4.6.2, (c)	Event Management	[3]
	IEC 80001-1, 4.6.2, (d)	Event Management	[4]

B.3.10 MDP.1 Medical IT-Network Planning Process

Name:	Medical IT-Network Planning Process		
Process ID:	MDP.1		
Context:	During the Planning phase of the Medical IT-Network, risk management shall be considered. This process deals with the approach to the planning of risk management activities.		
Purpose:	The purpose of the Medical IT-Network Planning Process is to ensure that Risk Management activities are planned in accordance with the Risk Management Policy.		

Outcomes:	As a result of the successful implementation of the Medical IT-Network planning process:	
	1. The current state of the IT network and planned changes have been considered in the planning of risk management.	
	2. Initial development of new medical IT-networks and changes to existing networks not covered by documented change permits are managed by projects.	
	3. A risk management plan for each medical IT-network is established and maintained.	
	4. Risk Management Plan is updated when a project introduces changes to an existing medical IT-network.	
Requirements traceability:	IEC 80001-1, 4.3.1, (c)	Overview [1]
	IEC 80001-1, 4.3.1	Overview [2, 3]
	IEC 80001-1, 4.3.5, (a, b, c, d)	Risk Management plan for the Medical IT-Network [4]
	IEC 80001-1, 4.3.5	Risk Management plan for the Medical IT-Network [5]

B.3.11 MDP.2 Medical IT-Network Documentation Process

Name:	Medical IT-Network Documentation Process
Process ID:	MDP.2
Context:	In order to successfully perform risk management activities, medical device manufacturers shall provide certain documents to allow for the successful connection of the device to the IT network. This process details what documents are required.
Purpose:	The purpose of the Medical IT-Network Documentation Process is to ensure additional documents are made available by the medical device manufacturer to the Responsible organization that describe the intended use of the device and give instructions necessary for the safe and effective use of the medical device. This should be a fluent process throughout the lifecycle and allow the Responsible Organization to protect the 3 key properties of the network.
Outcomes:	As a result of the successful implementation of the Medical IT-Network Documentation process:
	1. For a medical device that can be connected to an IT-network, the medical device manufacturer makes available, instructions for implementing such connection.
	2. Accompanying documents obtained for a medical device incorporated in a medical IT-network are maintained in the medical IT-network risk management file.
	3. Additional documentary information provided as necessary to perform risk management for the medical IT-network and is maintained in the medical IT-network risk management file.
	4. Network documentation necessary to support the risk management of the Medical IT-Network for the interfaces between the medical devices and all network components is maintained.
	5. As part of risk management planning of the medical IT-network a risk-relevant asset description is maintained.
	6. A list of assets of IT-networks interfacing with medical devices is maintained.
	7. All relevant documents in the medical IT-network life cycle are revised, amended, reviewed, and approved in accordance with a document control procedure.
	8. The risk management file provides full traceability for each identified hazard.

Requirements traceability:	IEC 80001-1, 3.5	Medical Device Manufacturers [2]
	IEC 80001-1, 3.5	(a) to (f) Medical Device Manufacturers [1, 3]
	IEC 80001-1, 3.6	(g) to (m) Providers of other Information Technology [3]
	IEC 80001-1, 4.3.1 (a)	Overview [5]
	IEC 80001-1, 4.3.1	(a) to (h) Overview [3, 6]
	IEC 80001-1, 4.3.3	(a) to (f) Medical IT-Network Documentation [4]
	IEC 80001-1, 5.1	Document control Procedure [7]
	IEC 80001-1, 5.2, (a, b, c, d)	Medical IT-Network Risk Management File [8]

B.3.12 MDP.3 Responsibility Agreements Process

Name:	Responsibility Agreements Process	
Process ID:	MDP.3	
Context:	In order to establish the responsibilities of Medical Device Manufacturers and Other IT providers, Responsibility Agreements are drafted.	
Purpose:	The purpose of the process is to establish the responsibilities of Medical Device Manufacturers and Other IT providers in regard to risk management responsibilities.	
Outcomes:	As a result of the successful implementation of the Responsibility Agreements Process: 1. The need for one or more documented responsibility agreements is determined whenever a medical device is incorporated into an IT network or the configuration of such a connection is changed. 2. Where necessary, a responsibility agreement is established. 3. A responsibility agreement defines the responsibilities of all relevant stakeholders throughout the lifecycle. 4. A responsibility agreement covers one or more projects or the maintenance of one or more medical IT-networks.	
Requirements traceability:	IEC 80001-1, 4.3.4	Responsibility Agreements [1, 2, 4]
	IEC 80001-1, 4.3.4 (a to h)	Responsibility Agreements [3]

B.3.13 MDP.4 Risk Management Policy Process

Name:	Risk Management Policy Process	
Process ID:	MDP.4	
Context:	The process ensures that a Risk Management policy is put in place which determines acceptable risks and will ensure that the policy balances the 3 key properties of the network with the mission of the responsible organization. The policy is defined in terms that can be interpreted throughout all risk management activities. Risk management activities are to be carried out in line with the risk management policy.	
Purpose:	The purpose of the Risk Management Policy Process is to define and document a risk management policy for incorporating medical devices into an IT-network.	

Outcomes:	As a result of successful implementation of the Risk Management Policy: 1. A policy for risk management for incorporating medical devices is established, designed and documented. 2. Criteria for determining acceptable risk are outlined in the Risk Management Policy, taking into account relevant international standards and national or regional regulations. 3. The three key properties are balanced with the mission of the responsible organization in the Risk Management Policy. 4. The Risk Management policy includes description of or reference to processes applying to Medical IT-Networks (including at least Event Management, Change — Release Management, Configuration Management and Monitoring).	
Requirements traceability:	IEC 80001-1, 3.3, (a)	Top management Responsibilities [1]

B.3.14 MDP.5 Organizational Risk Management Process

Name:	Organizational Risk Management Process	
Process ID:	MDP.5	
Context:	This is an umbrella process to outline the responsibilities of the Medical IT-Network Risk Manager in relation to the establishment of the Risk Management process.	
Purpose:	The purpose of the Organizational Risk Management Process is to outline the responsibilities of the Medical IT-Network Risk Manager in relation to the performance of Risk Management activities for an IT Network incorporating Medical Devices.	
Outcomes:	As a result of the successful implementation of the Organizational Risk Management process: 1. Execution of the risk management process in line with the established Risk Management policy is supervised by the Medical IT-Network risk manager. 2. Performance of Risk Management Process is reported to Top management by medical IT-network Risk Manager. 3. Communication between internal and external participants in Risk Management is managed by the medical IT-network Risk Manager. 4. A Risk Management Process which takes into account the defined use of the medical IT-network into account is established and maintained by the medical IT-network Risk Manager.	
Requirements traceability:	IEC 80001-1, 3.4	Medical IT-Network Risk Manager [1]
	IEC 80001-1, 3.4, (a)	Medical IT-Network Risk Manager [1]
	IEC 80001-1, 3.4, (b)	Medical IT-Network Risk Manager [2, 3]
	IEC 80001-1, 4.2.2	Risk Management Process [4]

B.4 PRM Conformity to ISO/IEC 15504-2

B.4.1 General

The PRM in this part of ISO/TR 80001 is suitable for use in process assessment performed in accordance with ISO/IEC 15504-2.

ISO/IEC 15504-2:2003, 6.2 places requirements on PRMs suitable for assessment against ISO/IEC 15504-2. The following subclauses quote the requirements for a PRM and describe how the PRM contained in this part of ISO/TR 80001 meets these. In each of the following clauses, the text in a box quotes the

requirements from the text of ISO/IEC 15504-2 and the text below each box describes the manner in which the requirements are satisfied in this PRM.

B.4.2 Requirements for Process Reference Models

ISO/IEC 15504-2:2003, Information technology — Process assessment — Performing an assessment

6.2.3.1 A PRM shall contain:

- a) A declaration of the domain of the PRM.
- b) A description, meeting the requirements of 6.2.4 of this International Standard, of the processes within the scope of the PRM.
- c) A description of the relationship between the PRM and its intended context of use.
- d) A description of the relationship between the processes defined within the PRM.

- The declaration of the domain is risk management process for the incorporation of medical devices into IT-Networks.
- The description of the processes is provided in [B.2](#).
- This PRM is intended to be used as described in the Introduction.
- A description of the relationship between the processes defined within this PRM is supported by [Figure B.1](#).
- The relevant communities of interest and their mode of use are described in the Introduction of this part of ISO/TR 80001.

ISO/IEC 5504-2:2003, Information technology — Process assessment — Performing an assessment

6.2.3.3 The processes defined within a Process Reference Model shall have unique process descriptions and identification

- The process descriptions are unique. The identification is provided by unique names and by the identifier of each process of this part of ISO/TR 80001.

B.4.3 Process descriptions.

ISO/IEC 15504-2:2003, Information technology — Process assessment — Performing an assessment

6.2.4 The fundamental elements of a Process Reference Model are the descriptions of the processes within the scope of the model. The process descriptions in the Process Reference Model incorporate a statement of the purpose of the process which describes at a high level the overall objectives of performing the process, together with the set of outcomes which demonstrate successful achievement of the process purpose. These process descriptions shall meet the following requirements:

- a) a process shall be described in terms of its purpose and outcomes;
- b) in any process description the set of process outcomes shall be necessary and sufficient to achieve the purpose of the process;
- c) process descriptions shall be such that no aspects of the Measurement Framework as described in Clause 5 beyond level 1 are contained or implied.

An outcome statement describes one of the following:

- production of an artefact;
- a significant change of state;
- meeting of specified constraints, e.g. requirements, goals, etc.

- These requirements are met by the process descriptions in [B.2](#).

Annex C (informative)

Process Assessment Model

C.1 General

This Annex provides an exemplar PAM to assess risk management processes for the incorporation of medical devices into IT-Networks for use in performing a conformant assessment in accordance with the requirements of ISO/IEC 15504-2. It enables implemented processes of IEC 80001-1 to be assessed according to the requirements of ISO/IEC 15504-2.

The PRM defined in [Annex B](#) associated with the process attributes defined in ISO/IEC 15504-2, establish a PAM used as a common basis for performing assessments of process capability, allowing for the reporting of results using a common rating scale.

An integral part of conducting an assessment is to use a PAM that is constructed for that purpose, is related to a PRM and is conformant with ISO/IEC 15504-2. ISO/IEC 15504-2 sets out the minimum requirements for performing an assessment in order to ensure consistency and repeatability of the ratings. ISO/IEC 15504-2 addresses the assessment of process and the application of process assessment for improvement and capability determination. Results of conformant process assessments may be compared when the scope of the assessments are considered to be similar.

The IEC 80001-1 PRM in [Annex B](#) has been used as the basis for the PAM. The relationship between IEC 80001-1, IEC 80001-1 (PRM), IEC 80001-1 (PAM), and ISO/IEC 15504-2 is shown in [Figure C.1](#).

Figure C.1 — Relationship to IEC 80001-1, IEC 80001-1(PRM), and ISO/IEC 15504-2

This example PAM contains a set of indicators to be considered when interpreting the intent of the PRM. It provides greater detail to indicate process performance and capability. The indicators may also be used when implementing a process improvement program or to help evaluate and select an assessment model, method, methodology, or tools.

This PAM embodies the core characteristics that could be expected of any PAM consistent with ISO/IEC 15504-2. Nevertheless, any other PAMs meeting the requirements of ISO/IEC 15504-2 may be used in a conformant assessment.

C.2 Overview of the exemplar Process Assessment Model

C.2.1 Introduction to Overview

This Annex provides an exemplar PAM that includes examples of assessment indicators.

The PRM defined in [Annex B](#) associated with the process attributes defined in ISO/IEC 15504-2, establish a PAM used as a common basis for performing assessments of risk management for networks incorporating medical devices process capability, allowing for the reporting of results using a common rating scale.

The PAM is a two-dimensional model of process capability. In one dimension, the process dimension, the processes are defined. In the other dimension, the capability dimension, a set of process attributes grouped into capability levels is defined. The process attributes provide the measurable characteristics of process capability. [Figure C.2](#) shows the relationship between the general structure of the PAM, ISO/IEC 15504-2 and IEC 80001-1.

Figure C.2 — Relationship between the Process Assessment Model and its inputs

A PRM and a capability dimension defined in ISO/IEC 15504-2 cannot be used alone as the basis for conducting reliable and consistent assessments of process capability since the level of detail provided is not sufficient. The descriptions of process purpose and outcomes in a PRM, and the process attribute

definitions in ISO/IEC 15504-2, need to be supported with a comprehensive set of indicators of process performance and process capability that are used for assessment performance. The assessment indicators are described in [C.3](#).

The exemplar PAM defined in this Annex is conformant with the ISO/IEC 15504-2 requirements for a PAM, and can be used as the basis for conducting an assessment of risk management (of IT networks incorporating medical devices) process capability.

C.2.2 Structure of the exemplar Process Assessment Model

NOTE This subclause describes the detailed structure of the PAM and its key components.

C.2.2.1 Processes

[Figure C.3](#) shows the processes from IEC 80001-1, which are included in the process dimension of the exemplar PAM for risk management of Medical IT-Networks.

Figure C.3 — Processes in the Process Reference Model

C.2.2.2 Process dimension

The process dimension of the PAM includes all processes from the PRM contained in IEC 80001-1 (PRM) and shown in [Figure C.3](#). Each process in the PAM is described in terms of a purpose statement. These statements contain the unique functional objectives of the process when performed in a particular environment. A list of specific outcomes is associated with each of the process purpose statements, as a list of expected positive results of the performance of the processes. Satisfying the purpose statements of a process represents the first step in building a level 1 process capability where the expected outcomes are observable. The processes are described in [C.5.2](#) to [C.5.15](#).

C.2.2.3 Capability dimension

For the capability dimension, the process capability levels and process attributes are identical to those defined in ISO/IEC 15504-2.

Evolving process capability is expressed in the PAM in terms of process attributes grouped into capability levels. Process attributes are features of a process that can be evaluated on a scale of achievement,

providing a measure of the capability of the process. They are applicable to all processes. Each process attribute describes a facet of the overall capability of managing and improving the effectiveness of a process in achieving its purpose and contributing to the business goals of the organization.

A capability level is a set of process attribute(s) that work together to provide a major enhancement in the capability to perform a process. The levels constitute a rational way of progressing through improvement of the capability of any process and are defined in ISO/IEC 15504-2.

There are six capability levels, incorporating nine process attributes.

Level 0: Incomplete process

The process is not implemented, or fails to achieve its process purpose.

At this level, there is little or no evidence of any systematic achievement of the process purpose.

Level 1: Performed process

The implemented process achieves its process purpose.

Level 2: Managed process

The described previously Performed process is now implemented in a managed fashion (planned, monitored and adjusted) and its work products are appropriately established, controlled, and maintained.

Level 3: Established process

The described previously Managed process is now implemented using a defined process that is capable of achieving its process outcomes.

Level 4: Predictable process

The described previously Established process now operates within defined limits to achieve its process outcomes.

Level 5: Optimizing process

The described previously Predictable process is continuously improved to meet relevant current and projected business goals.

Within the PAM, the measure of capability is based upon the nine process attributes (PA) defined in ISO/IEC 15504-2. Process attributes are used to determine whether a process has reached a given capability. Each attribute measures a particular aspect of the process capability.

At each level there is no ordering between the process attributes; each attribute addresses a specific aspect of the capability level with each being of equal importance for the achievement of the relevant capability level. The list of process attributes is shown in [Table C.1](#).

Table C.1 — Capability levels and process attributes

Process Attribute ID	Capability Levels and Process Attributes
	Level 0: Incomplete process
	Level 1: Performed process
PA 1.1	Process performance
	Level 2: Managed process
PA 2.1	Performance management
PA 2.2	Work Products management
	Level 3: Established process
PA 3.1	Process definition
PA 3.2	Process deployment

Table C.1 (continued)

Process Attribute ID	Capability Levels and Process Attributes
	Level 4: Predictable process
PA 4.1	Process measurement
PA 4.2	Process control
	Level 5: Optimizing process
PA 5.1	Process innovation
PA 5.2	Continuous optimization

The process attributes are evaluated on a four point ordinal scale of achievement, as defined in ISO/IEC 15504-2 and used in the exemplar assessment method. They provide insight into the specific aspects of process capability required to support process improvement and capability determination.

C.3 Assessment Indicators

C.3.1 Overview

The PAM is based on the principle that the capability of a process can be assessed by demonstrating the achievement of process attributes on the basis of evidence related to assessment indicators.

There are two types of assessment indicators: process capability indicators, which apply to capability levels 1 to 5 and process performance indicators, which apply exclusively to capability level 1. These indicators are defined in [C.3.2](#) and [C.3.3](#).

The process attributes in the capability dimension have a set of process capability indicators that provide an indication of the extent of achievement of the attribute in the instantiated process. These indicators concern significant activities, resources, or results associated with the achievement of the attribute purpose by a process.

The process capability indicators are the following:

- Generic Practice (GP);
- Generic Resource (GR);
- Generic Work Product (GWP).

As additional indicators for supporting the assessment of a process at Level 1, each process in the process dimension has a set of process performance indicators which is used to measure the degree of achievement of the process performance attribute for the process assessed.

The process performance indicators are the following:

- Base Practice (BP);
- Work Product (WP).

The performance of Base Practices (BPs) provides an indication of the extent of achievement of the process purpose and process outcomes. Work Products (WPs) are either used or produced (or both), when performing the process.

The process performance and process capability indicators defined in the PAM represent types of objective evidence that might be found in an instantiation of a process and therefore could be used to judge achievement of capability.

[Figure C.4](#) shows how the assessment indicators are related to process performance and process capability.

Figure C.4 — Assessment Indicators

C.3.2 Process Capability Indicators

The three types of process capability indicators related to levels 1 to 5 are identified in [Figure C.5](#). They are intended to be applicable to all processes.

Figure C.5 — Process capability indicators

All the process capability indicators relate to the process attributes defined in the capability dimension of the PAM. They represent the type of evidence that would support judgments of the extent to which the attributes are achieved. Evidence of their effective performance or existence supports the judgment of the degree of achievement of the attribute. The generic practices are the principal indicators of process capability.

The **Generic Practice (GP)** indicators are indicators of activities of a generic type and provide guidance on the implementation of the attribute's characteristics. They support the achievement of the process attribute and many of them concern management practices, i.e. practices that are established to support the process performance as it is characterized at level 1.

During the evaluation of process capability, the primary focus is on the performance of the generic practices. In general, performance of all generic practices is expected for full achievement of the process attribute.

The **Generic Resource (GR)** indicators are associated resources that may be used when performing the process in order to achieve the attribute. These resources may include human resources, tools, methods, and infrastructure. The availability of a resource indicates the potential to fulfil the purpose of a specific attribute.

The assessor should interpret the generic resources according to the process assessed; e.g. for PA 2.1 resources (with identified objectives, responsibilities and authorities), an assessor would look for roles (with identified objectives, responsibilities and authorities) in primary and supporting processes, but for organizational processes would look for governance structures (e.g. mandated committees, positions) with identified objectives, responsibilities, and authorities.

The **Generic Work Product (GWP)** indicators are sets of characteristics that would be expected to be evident in work products of generic types as a result of achievement of an attribute. The generic work products form the basis for the classification of the work products defined as process performance indicators; they represent basic types of work products from all types of processes.

These three types of indicators help to establish objective evidence of the extent of achievement of the specified process attribute.

Due to the fact that Level 1 capability of a process is only characterized by the measure of the extent to which the process purpose is achieved, the process performance attribute (PA 1.1) has a single generic practice indicator (GP 1.1.1). In order to support the assessment of PA 1.1 and to amplify the process performance achievement analysis, additional process performance indicators are defined in the PAM.

C.3.3 Process Performance Indicators

There are two types of process performance indicators: **Base Practice (BP)** indicators and **Work Product (WP)** indicators. Process performance indicators relate to individual processes defined in the process dimension of the PAM and are chosen to explicitly address the achievement of the defined process outcomes.

Evidence of performance of the base practices, and the presence of work products with their expected characteristics, provide objective evidence of the achievement of the process outcomes.

A base practice is an activity that addresses the purpose of a particular process. Consistently performing the base practices associated with a process helps the consistent achievement of its purpose. A coherent set of base practices is associated with each process in the process dimension. The base practices are described at an abstract level, identifying "what" should be done without specifying "how". Implementing the base practices of a process should achieve the basic outcomes that reflect the process purpose. Base practices represent only the first step in building process capability, but the base practices represent the unique, functional activities of the process, even if that performance is not systematic. The performance of a process produces work products that are identifiable and usable in achieving the purpose of the process. In this assessment model, each work product has a defined set of example work product characteristics that may be used when reviewing the work product to assess the effective performance of a process. Work product characteristics may be used to identify the corresponding work product produced/used by the assessed organization.

[C.5.2](#) to [C.5.15](#) extend the description of the processes contained within the PRM with the inclusion of base practices and the associated work products.

[Table C.4](#) contains a list of generic and specific work products together with the work product characteristics.

C.4 Measuring process capability

The process performance and process capability indicators in this model give examples of evidence that an assessor might obtain, or observe, in the performance of an assessment. The evidence obtained in the assessment, through observation of the implemented process, can be mapped onto the set of indicators to enable correlation between the implemented process and the processes defined in this assessment model. These indicators provide guidance for assessors in accumulating the necessary objective evidence to support judgments of capability. They are not intended to be regarded as a mandatory set of checklists to be followed.

An indicator is defined as an objective characteristic of a practice or work product that supports the judgment of the performance or capability of an implemented process. The assessment indicators, and their relationship to process performance and process capability, are shown in [Figure C.6](#).

Assessment indicators are used to confirm that certain practices were performed, as shown by observable evidence collected during an assessment. All such evidence comes either from the examination of work products of the processes assessed, or from statements made by the performers and managers of the processes.

The existence of base practices, work products, and work product characteristics, provide evidence of the performance of the processes associated with them. Similarly, the existence of process capability indicators provides evidence of process capability.

The evidence obtained should be recorded in a form that clearly relates to an associated indicator, so that the support for the assessor's judgment can be readily confirmed or verified as required by ISO/IEC 15504-2.

The output from a process assessment is a set of process profiles, one for each process within the scope of the assessment. A typical process profile is illustrated in ISO/IEC 15504-4. Each process profile consists of a set of the process attribute ratings for an assessed process. Each attribute rating represents a judgment by the assessor of the extent to which the attribute is achieved. To improve the reliability and repeatability of the assessment, the judgments of the assessor are based on a coherent set of recorded objective evidences.

Figure C.6 — Relationship between assessment indicators and process capability

C.5 Process dimension and process performance indicators (Level 1)

C.5.1 General

This subclause defines the processes and the process performance indicators, also known as the process dimension, of the PAM. The processes in the process dimension can be directly mapped to the processes defined in the PRM. The process purposes, outcomes, the practices, the inputs, and outputs of processes are included in this subclause. The individual processes are described in terms of process name, process purpose, and process outcomes as defined in IEC 80001-1 (PRM):

In addition, the process dimension of the PAM provides information in the form of

- a set of base practices for the process needed to accomplish the process outcomes; a single base practice is explicitly associated with one or more process outcome,
- a number of inputs/outputs associated with each process and their relationship to one or more of its outcomes by numbers in square brackets, (i.e. [n]), and
- characteristics associated with each input/output.

The Work product identifiers and characteristics are contained in [Table C.4](#).

The process purposes, outcomes, the base practices, and the work products associated with the processes are included in this clause. The work product characteristics are contained in [C.8](#). The base practices and work products constitute the set of indicators of process performance. The associated work products listed in this clause may be used when reviewing potential inputs and outputs of an organization's process implementation. The associated work products provide objective guidance for potential inputs and outputs to look for, and objective evidence supporting the assessment of a particular process. A documented assessment process and assessor judgment is needed to ensure that process context (application domain, business purpose, development methodology, size of the organization, etc.) is explicitly considered when using this information. This list should not be considered as a checklist of what each organization must have but rather as an example and starting point for considering whether, given the context, the work

products are necessary and contributing to the intended purpose of the process. These work products are identified with their work product identifier number as used in the [Table C.3](#)

Please note that details of the process context, purpose, and outcomes have not been included within the PAM. These details can be found by referring to the individual process in the PRM which can be found [B.3.1](#) to [B.3.14](#). The process ID used in the PRM is provided in each of the PAM process descriptions that follow in [C.5.2](#) to [C.5.15](#).

C.5.2 Medical IT-Network Risk Management Process

Process ID:	MRM.1
Name:	Medical IT-Network Risk Management Process (PRM Reference: B.2.1)
Base Practices:	MRM.1.BP1: Establish a Medical IT-Network Risk Management File. Establish a Medical IT-Network Risk Management file that serves as a central repository for all documentation as required to carry out risk management activities. [Outcome: 1]. MRM.1.BP2: Assign Risk Management Resources. Ensure that adequate appropriately qualified resources (including Medical IT-Network Risk Manager) for management, performance of work and assessment activities are assigned. [Outcome: 2, 4]. MRM.1.BP3: Identify Risk Management Stakeholders and inform of their responsibilities. Identify people responsible for risk management and lifecycle management activities of medical devices incorporated into IT networks. Ensure resources are adequately informed of their responsibilities and that they co-operate with the Medical IT-Network Risk Manager. [Outcome: 5, 6, 8] MRM.1.BP4: Manage the Medical IT-Network throughout the life cycle as per the Risk Management Plan and Process. Manage the supervision, operation, installation and maintenance of Medical IT-Network(s) throughout the life cycle according to the Risk Management plan and follow the results of the IT-Network Risk Management Process. Maintain the key properties of the medical IT-network throughout the life cycle. [Outcome: 7, 9] MRM.1.BP5: Document Risk Management activities. Risk management activities of risk analysis, risk evaluation, risk control, residual risk evaluation and reporting and approval are documented in the Risk Management File. [Outcome: 1, 10] MRM.1.BP6: Review Risk Management Activities at defined intervals. Risk management activities, including Event Management, are reviewed at defined intervals. [Outcome: 3]
Inputs:	Outputs:
08-03 Risk Management Plan [MRM.1, BP.4, BP.6] [Outcome 3, 7, and 9]	16-02 Medical IT-Network Risk Management file [MRM.1, BP.1,5] [Outcome 1,10]
	14-01 Risk Management Resource Register [MRM.1, BP.2,3] [Outcome 2, 4 and 5, 6, 8]

C.5.3 Risk Analysis and Evaluation Process

Process ID:	MRM.1.1
Name:	Risk Analysis and Evaluation Process (PRM Reference: B.2.2)
Base Practices:	MRM.1.1.BP1: Identify likely hazards. Identify hazards that are likely to arise from the Medical IT-Network. [Outcome: 1]. MRM.1.1.BP2: Estimate, analyse and evaluate associated risks. Evaluate associated risks using available information or data throughout the lifecycle for each identified hazard. [Outcome: 2]. MRM.1.1.BP3: List possible consequences of harm. List possible consequences of harm (where probability of occurrence cannot be estimated) for use in risk control. [Outcome: 3] MRM.1.1.BP4: Record results of Risk Analysis and Evaluation activities. Record the results of these activities in the Medical IT-Network Risk Management file. Record instances where the estimated risk is so low that risk reduction need not be pursued (as per RM plan) in the Medical IT-Network Risk Management File. [Outcome 4, 5].

Inputs:	Outputs:
08-03 Risk Management plan [MRM1.1, BP.4] [Outcome 4, 5]	03-02 Risk log [MRM1.1, BP.1] [Outcome 1]
	15-01 Risk analysis report [MRM1.1, BP.2] [Outcome 2]
	15-02 Risks status report [MRM1.1, BP.2] [Outcome 2]
	07-01 Risk Measure [MRM1.1, BP.2, 3] [Outcome 2, 3]
	03-03 Hazard log [MRM1.1, BP.1] [Outcome 1]
	03-04 Consequences log [MRM1.1, BP.3] [Outcome 3]
	16-02 Medical IT-Network Risk Management file [MRM1.1, BP.4] [Outcome 4, 5]

C.5.4 Risk Control Process

Process ID:	MRM.1.2
Name:	Risk Control Process (PRM Reference: B.2.3)
Base Practices:	MRM.1.2.BP1: Identify proposed risk control measures for each identified risk. Use risk control measures in the following order, inherent control by design, protective measures, and information for assurance. Consider key properties in the following order, safety, effectiveness, and data and systems security when considering risk control options. [Outcome: 1, 2, 3]. MRM.1.2.BP2: Manage Risk Control measures under the Change-Release Management process. Manage risk control measures that require a change to the Medical IT-Network under the Change-Release Management process. Notify the medical device manufacturer (if a change is undertaken without documented consent of the manufacturer) and follow all necessary regulatory steps for putting such a modified medical device into service. (Changes to a medical device without documented consent of the medical device manufacturer are NOT recommended). [Outcome: 5, 8]. MRM.1.2.BP3: Record selected risk control measures in the Medical IT-Network Risk Management File. [Outcome: 6]. MRM.1.2. BP4: Conduct risk/benefit analysis and document results including residual risk. Conduct risk/benefit analysis of residual risk when risk reduction measures have been determined not to be practical. Document the results of the risk/benefit analysis including residual risk in the Medical IT-Network risk management file. [Outcome: 4, 9]. MRM.1.2.BP5: Implement Risk Control measures. Where the estimated risk(s) are not acceptable, selected risk control measures are implemented according to risk control option analysis. [Outcome: 7]. MRM.1.2.BP6: Verify and document the implementation and effectiveness of risk control measures. Verify the implementation and effectiveness of all risk control measures in the operational system and document in the Medical IT-Network Risk Management File. [Outcome: 10]. MRM.1.2.BP7: Review and evaluate risk control measures and operational system and document results. Review implemented risk control measures and the operational system for new unacceptable risks. Document the results of the evaluation in the Medical IT-Network risk management file. [Outcome: 11].
Inputs:	Outputs:
13-02 Risk action request [MRM1.2, BP.1] [Outcome 1, 2, 3]	13-03 Risk Benefit Analysis Record [MRM1.2, BP.4] [Outcome 4]
08-02 Release plan [MRM1.2, BP.2] [Outcome 5, 8]	16-02 Medical IT-Network Risk Management File [MRM1.2, BP.3, 6, 7] [Outcome 6, 9, 10, 11]

08-05 Change Management plan [MRM1.2, BP.2, BP.6] [Outcome 5, 8, 10]	
---	--

C.5.5 Residual Risk Process

Process ID:	MRM.1.3
Name:	Residual Risk Process (PRM Reference: B.2.4)
Base Practices:	MRM.1.3.BP1: Review residual risk. Individual residual risks and overall residual risks are assessed for acceptability by persons responsible for reviewing and accepting residual risk in co-operation with the Medical IT-Network Risk Manager. [Outcome: 1, 3]. MRM.1.3.BP2: Evaluate residual risk. Evaluate residual risk based on a pre-release assessment of the effectiveness of the implemented risk control measures. [Outcome: 2]. MRM.1.3.BP3: Apply additional risk control measures. Apply additional risk control measures where an individual or the overall risk is not determined to be acceptable. [Outcome: 4]. MRM.1.3.BP4: Define and document residual risk summary. [Outcome: 5]. MRM.1.3.BP5: Document risk/benefit analysis. Document risk/benefit analysis of the individual or overall residual risk against the health benefits accrued (where reduction of the residual risk to an acceptable level is not practicable). [Outcome: 6]. MRM.1.3.BP6: Make decision on residual risk. Make a decision on whether or not to approve the residual risk on the basis of the documented risk/benefit analysis. [Outcome: 6].
Inputs:	Outputs:
13-03 Risk Benefit Analysis record [MRM1.3, BP.1, 2, 3] [Outcome 1, 2, 3, 4]	13-03 Risk Benefit Analysis record [MRM1.3, BP.4, 5] [Outcome 5,6]
	16-02 Medical IT-Network Risk Management File [MRM1.3, BP.4] [Outcome 5]

C.5.6 Change Release and Configuration Management Process

Process ID:	CRCM.1
Name:	Change Release and Configuration Management Process (PRM Reference: B.2.5)
Base Practices:	CRCM.1.BP1: Document and Apply Configuration Management process. Document configuration management process and apply during the risk management of change release management. [Outcome: 5]. CRCM.1.BP2: Document Configuration Management information. Document current configuration management information in the Medical IT-Network Risk Management file. [Outcome: 1]. CRCM.1.BP3: Document Change Release Process. Document and apply change-release management (including Risk Management). [Outcome: 3]. CRCM.1.BP4: Use risk management process to determine acceptability of changes. Determine the approval and acceptability of changes using the results of the risk management process during the change-release process. [Outcome: 4]. CRCM.1.BP5: Implement action plans following the Change-Release management process. [Outcome: 2].
Inputs:	Outputs:
09-01 Configuration Management Policy [CRCM.1, BP1] [Outcome 5]	09-01 Configuration Management Policy [CRCM.1, BP1] [Outcome 5]
08-05 Configuration Management Plan [CRCM.1, BP1] [Outcome 5]	08-05 Configuration Management Plan [CRCM.1, BP1] [Outcome 5]
09-03 Release Policy [CRCM.1, BP.3] [Outcome 3]	09-02 Configuration item definition policy [CRCM.1, BP.2] [Outcome 1]
08-02 Release Plan [CRCM.1, BP.3] [Outcome 3]	13-01 Configuration Management Record [CRCM.1, BP.2] [Outcome 1]

08-03 Risk Management plan [CRCM.1, BP.4] [Expected Result 4]	03-01 Configuration Item Change log [CRCM.1, BP.2] [Outcome 1]
	16-01 Configuration Management DB repository [CRCM.1, BP.2] [Outcome 1]
	23-01 Configuration item control procedure [CRCM.1, BP.2] [Outcome 1]
	16-02 Medical IT-Network Risk Management File [CRCM.1, BP.2] [Outcome 1]
	09-03 Release Policy [CRCM.1, BP.3] [Outcome 3]
	08-02 Release Plan [CRCM.1, BP.3] [Outcome 3]

C.5.7 Decision on how to apply Risk Management Process

Process ID:	CRCM.2	
Name:	Decision on the application of Risk Management Process (PRM Reference: B.2.6)	
Base Practices:	CRCM.2.BP1: Implement Change-Release Management process. Implement the Change-release management process for any new Medical IT-Network or a change to an existing Medical IT-Network. [Outcome: 1]. CRCM.2.BP2: Consider the nature of the change. Consider the nature of the change to decide if the change can be made by an applicable change permit or if a Medical IT-Network project is initiated.] [Outcome: 2]. CRCM.2.BP3: Define change permit. Define change permit and specify what records are to be kept for each permitted change. [Outcome: 3, 4]. CRCM.2.BP4: Specify the constraints of the change permit. [Outcome: 3]. CRCM.2.BP5: Implement routine change. Implement routine change once change permit has been defined and the constraints have been specified. [n/a]. CRCM.2.BP6: Document Change permits. Document change permits and maintain in the Medical IT-Network Risk Management File. [Outcome: 5]. CRCM.2. BP7: Establish project plan. Establish project plan for specific circumstances that have the potential to introduce new risk (not covered by change permit). [Outcome: 6]. CRCM.2.BP8: Maintain and revise Project Plan. Maintain project plan and revise to reflect changes to the project. [Outcome: 6, 7]. CRCM.2.BP9: Document Project plan. Document the project plan in the Medical IT-Network Risk management file. [Outcome: 8].	
Inputs:	Outputs:	
08-05 Configuration Management Plan [CRCM.2, BP.1] [Outcome1]	13-04 Change Permit Record [CRCM.2, BP.3, 4, 6] [Outcome 3, 4, 5]	
08-02 Release plan [CRCM.2, BP.1] [Outcome]	08-01 Project Plan [CRCM.2, BP.7, 8, 9] [Outcome 6, 7, 8]	
	16-02 Medical IT-Network Risk Management File [CRCM.2, BP.9] [Outcome 8]	

C.5.8 Go-Live Process

Process ID:	CRCM.3
Name:	Go-Live Process (PRM Reference: B.2.7)

Base Practices:	CRCM.3.BP1: Review residual risk. Review Medical IT-Network residual risk summaries for acceptability of risk associated with interactions of recent or pending projects or changes, prior to going live. [Outcome: 1, 2]. CRCM.3.BP2: Approve specified change. Approval is given for the specified change by the Medical IT-Network Risk Manager prior to go-live. [Outcome: 3]. CRCM.3.BP3: Document approval of residual risk. Document the approval of the Medical IT-Network residual risk in the Medical IT-Network risk management file. [Outcome: 4].
Inputs:	Outputs:
13-03 Risk Benefit Analysis Record [CRCM.3, BP1, 2] [Outcome 1, 2, 3]	08-02 Change Request Approval Record [CRCM.3, BP.2, 3] [Outcome 3, 4]
	16-02 Medical IT-Network Risk Management File [CRCM.3, BP.3] [Outcome 4]

C.5.9 Monitoring Process

Process ID:	LNRM.1
Name:	Monitoring Process (PRM Reference: B.2.8)
Base Practices:	LNRM.1.BP1: Establish process outlining monitoring requirements. Establish a process which outlines the monitoring requirements as part of the risk management plan to monitor each installed Medical IT-Network. [Outcome: 1]. LNRM.1.BP2: Include monitoring requirements as part of the risk management plan. [Outcome: 2]. LNRM.1.BP3: Initiate Event Management process. Initiate the Event Management process where monitoring initiates actual or potential increase in risk. [Outcome: 3].
Inputs:	Outputs:
08-03 Risk Management plan [LNRM.1, BP.2] [Outcome 2]	23-03 Monitoring Procedure [LNRM.1, BP.1] [Outcome 1]
	08-03 Risk Management plan [LNRM.1, BP.2] [Outcome 2]

C.5.10 Event Management Process

Process ID:	LNRM.2
Name:	Event Management Process (PRM Reference: B.2.9)
Base Practices:	LNRM.2.BP1: Establish Event Management Process. Establish Event Management process to ensure that negative events are captured and documented. [Outcome: 1]. LNRM.2.BP2: Evaluate events and proposed changes arising from events. Evaluate events and proposed changes arising from events. [Outcome: 2]. LNRM.2.BP3: Manage proposed changes. Manage proposed changes through the change-release management process. [Outcome: 2]. LNRM.2.BP4: Track corrective and preventive actions. Track all corrective and preventive actions leading to closure. [Outcome: 3]. LNRM.2.BP5: Report significant finds. Report significant finds to the medical IT-network risk manager and/or others in the responsible organization. [Outcome: 4].
Inputs:	Outputs:
08-02 Release plan [LNRM.2, BP3] [Outcome 2]	23-04 Event Management Procedure [LNRM.2, BP.1, 2, 4] [Outcome 1, 2, 3]
08-05 Change Management plan [LNRM.2, BP3] [Outcome 2]	15-03 Event Management Report [LNRM.2, BP.5] [Outcome 4]

C.5.11 Medical IT-Network Planning Process

Process ID:	MDP.1
Name:	Medical IT-Network Planning Process (PRM Reference: B.2.10)
Base Practices:	MDP.1.BP1: Plan risk management activities. Plan risk management activities considering the current state of the IT network and planned changes. [Outcome: 1]. MDP.1.BP2: Initiate project. Initiate a project for the development of a new Medical IT-Network or for changes which are not covered by documented change permits. [Outcome: 2] MDP.1.BP3: Maintain and update risk management plan for each Medical IT-Network. Risk Management plan is maintained and updated when a project introduces changes to an existing Medical IT-Network. [Outcome: 3, 4].
Inputs:	Outputs:
08-03 Risk Management plan [MDP.1, BP1,, 3] [Outcome 1, 2,4]	08-03 Risk Management plan [MDP.1, BP1, 2, 3] [Outcome 1, 2, 4]
	08-01 Project plan [MDP.1, BP.3] [Outcome 3]

C.5.12 Medical IT-Network Documentation Process

Process ID:	MDP.3
Name:	Medical IT-Network Documentation Process (PRM Reference: B.2.11)
Base Practices:	MDP.2.BP1: Obtain/Provide additional documentation for the connection of a medical device to an IT network. Obtain (Responsible organization) /Provide (medical device manufacturer) instructions for implementing the connection of a medical device to an IT network. [Outcome: 1]. MDP.2.BP2: Maintain accompanying documents in the Medical IT-Network risk management file. Maintain documents and additional documentation (obtained for a medical device incorporated into an IT network) as required for risk management purposes in the Medical IT-Network Risk Management file. [Outcome: 2, 3, 4]. MDP.2.BP3: Maintain risk relevant asset description. Maintain risk relevant asset description, including a list of assets of IT networks interfacing with medical devices, as part of the risk management process. [Outcome: 5, 6]. MDP.1.BP5: Establish document control procedure. [Outcome: 6]. MDP.1.BP4: Maintain documents as per the document control procedure. Revise, amend, review, and approve all relevant documents in the medical IT-network life cycle in accordance with the document control procedure [Outcome: 7]. MDP.1.BP5: Provide traceability for each identified hazard. Provide traceability for each identified hazard within the Medical IT-Network risk management file. [Outcome: 8].
Inputs:	Outputs:
03-03 Hazard log [MDP.1, BP.1] [Outcome 1]	03-03 Hazard log [MDP.1, BP.1] [Outcome 1]
03-04 Consequence log [MDP.1, BP.1] [Outcome 1]	03-04 Consequence log [MDP.1, BP.1] [Outcome 1]
	06-01 Installation Guide [MDP.1, BP.1] [Outcome 1]
	06-02 Training Material [MDP.1, BP.1] [Outcome 1]
	06-03 Product Operation guide [MDP.1, BP.1] [Outcome 1]
	17-01 Product requirements [MDP.1, BP.1] [Outcome 1]
	17-02 Software Requirements [MDP.1, BP.1] [Outcome 1]

	17-03 System Requirements [MDP.1, BP.1] [Outcome 1]
	22-01 Release Notes [MDP.1, BP.1] [Outcome 1]
	16-02 Medical IT-Network Release Management file [MDP.1, BP.2] [Outcome 2]
	14-02 Risk relevant asset register [MDP.1, BP.3] [Outcome 3]
	23-02 Document Management Procedure [MDP.1, BP.5, 6] [Outcome 7]
	16-02 Medical IT-Network Risk Management File [MDP.1, BP.7] [Outcome 8]

C.5.13 Responsibility Agreements Process

Process ID:	MDP.3
Name:	Responsibility Agreements Process (PRM Reference: B.2.12)
Base Practices:	MDP.3.BP1: Determine the need for a responsibility agreement. Determine the need for one or more documented responsibility agreements whenever a medical device is incorporated into an IT network or the configuration of such a connection is changed. [Outcome: 1]. MDP.3.BP2: Define the responsibilities of stakeholders within the responsibility agreement. [Outcome: 2]. MDP.3.BP3: Define the scope of the responsibility agreement. Define the scope of the responsibility agreement including whether the agreement applies to one or more project or the maintenance of one or more Medical IT-Networks. Compliance is checked by inspection of the Medical IT-Network risk management file. [Outcome: 3].
Inputs:	Outputs:
n/a	02-01 Responsibility Agreement [MDP.3, BP.1, 2, 3] [Outcome 1, 2, 3]
	16-02 Medical IT-Network Risk Management File [MDP.3, BP.3] [Outcome 3]

C.5.14 Risk Management Policy Process

Process ID:	MDP.4
Name:	Risk Management Policy Process (PRM Reference: B.2.13)
Base Practices:	MDP.4.BP1: Establish Risk Management Policy. Risk Management policy outlines criteria for determining acceptable risk, taking into account relevant international standards and national or regional regulations. [Outcomes: 1, 2]. MDP.4.BP2: Document Risk Management Policy with the Medical IT-Network Risk Management file. [Outcome: 1]. MDP.4.BP3: Design the risk management policy to balance the three key properties with the mission of the responsible organization. [Outcome: 1, 3]. MDP.4.BP4: Include description of or reference to processes applying to Medical IT-Networks. Include description of or reference to processes applying to Medical IT-Networks. (Including at least Event Management, Change — Release Management, Configuration Management and Monitoring). [Outcome: 4].
Inputs:	Outputs:
09-04 Risk Management Policy [MDP.4, BP.1] [Outcome 1, 2]	09-04 Risk Management Policy [MDP.4, BP.1] [Outcome 1, 2]
	16-02 Medical IT-Network Risk Management file [MDP.4, BP.2] [Outcome 1]

C.5.15 Organizational Risk Management Process

Process ID:	MDP.5
Name:	Organizational Risk Management Process (PRM Reference: B.2.14)
Base Practices:	MDP.5.BP1: Establish and maintain Risk Management Process. Establish and maintain a risk management process which takes into account the defined use of the medical IT-network. [Outcome: 4] MDP.5.BP2: Execute Risk Management Process in line with Risk Management Policy. Medical IT-Network risk Manager executes the risk management process in line with the risk management policy. [Outcome: 1]. MDP.5.BP3: Report on performance of Risk Management Process. Report (made by Medical IT-Network Risk Manager) on the performance of the risk management process to Top management. [Outcome: 2]. MDP.5.BP4: Manage communications. Manage communications (made by Medical IT-Network Risk Manager) between internal and external participants in risk management. [Outcome: 3].
Inputs:	Outputs:
09–04 Risk Management policy [MDP.2, BP.2] [Outcome 1]	15–04 Risk Management Process Report [MDP.5, BP.3] [Outcome 2]
	08–06 Risk Management Communications Plan [MDP.5, BP.4] [Outcome 3]

C.6 Process capability indicators (Level 1 to 5)

This clause presents the process capability indicators related to the process attributes associated with capability levels 1 to 5 defined in the capability dimension of the PAM. Process capability indicators are the means of achieving the capabilities addressed by the considered process attributes. Evidence of process capability indicators supports the judgment of the degree of achievement of the process attribute.

The capability dimension of the PAM consists of six capability levels matching the capability levels defined in ISO/IEC 15504-2. This Clause describes the process capability indicators for the nine process attributes included in the capability dimension for levels 1 to 5. ISO/IEC 15504-2, Clause 5 describes the assessment indicators for process performance which is characterized by Level 1 process capability.

Level 0 does not include any type of indicators. Level 0 reflects a non-implemented process or a process which fails to partially achieve its outcomes.

NOTE 1 In the next paragraphs, ISO/IEC 15504-2 process attribute definitions and attribute achievements are identified with italic font.

NOTE 2 Following each generic resource and generic input/output is '[PA x.y Achievement 1]'. This refers to process attribute x.y achievement 1 which is satisfied by this indicator.

Level 1: Performed process

PA 1.1 Process performance attribute

The process performance attribute is a measure of the extent to which the process purpose is achieved. As a result of full achievement of this attribute:

— The process achieves its defined outcomes.

Generic Practices for PA 1.1

GP 1.1.1 Achieve the process outcomes

Perform the intent of the practices.

Use inputs and produce outputs that evidence the process

NOTE The assessment of a performed process is based on process performance indicators, which are defined in [C.3.1](#) and [C.3.2](#).

Generic Resources for PA 1.1

Resources are used to perform the intent of process specific practices.

[PA 1.1 Achievement a]

Generic Inputs/Outputs for PA 1.1

11-00 Product [PA 1.1 Achievement a]

— Inputs/Outputs exist that provide evidence of the achievement of the process outcomes.

Level 2: Managed process

The described previously *Performed process* is now implemented in a managed fashion (planned, monitored, and adjusted) and its work products are appropriately established, controlled, and maintained.

The following attributes of the process, together with the previously defined attributes, demonstrate the achievement of this level:

PA 2.1 Performance management attribute

The performance management attribute is a measure of the extent to which the performance of the process is managed. As a result of full achievement of this attribute:

- objectives for the performance of the process are identified;
- performance of the process is planned and monitored;
- performance of the process is adjusted to meet plans;
- responsibilities and authorities for performing the process are defined, assigned, and communicated;
- resources and information necessary for performing the process are identified, made available, allocated and used;
- interfaces between the involved parties are managed to ensure both effective communication and also clear assignment of responsibility.

Generic Practices for PA 2.1

GP 2.1.1 Identify the objectives for the performance of the process.

NOTE Performance objectives may include, (1) quality of the outputs produced, (2) process cycle time or frequency and (3) resource usage.

Performance objectives are identified based on process requirements and customer requirements.

The scope and boundaries of the process performance is defined.

Assumptions and constraints are considered when identifying the performance objectives.

GP 2.1.2 Plan and monitor the performance of the process to fulfil the identified objectives.

Plan(s) for the performance of the process are developed. The process performance cycle is defined.

Key milestones for the performance of the process are established.

Estimates for process performance attributes are determined and maintained.

Process activities and tasks are defined.

Schedule is defined and aligned with the approach to performing the process.

Process inputs/outputs reviews are planned.

The process is performed according to the plan(s).

Process performance is monitored to ensure planned results are achieved.

GP 2.1.3 Adjust the performance of the process.

Process performance issues are identified.

Appropriate actions are taken when planned results and objectives are not achieved.

The plan(s) are adjusted, as necessary.

Rescheduling is performed as necessary.

GP 2.1.4 Define responsibilities and authorities for performing the process.

Responsibilities, commitments and authorities to perform the process are defined, assigned and communicated.

Responsibilities and authorities to verify process inputs/outputs are defined and assigned.

The needs for process performance experience, knowledge and skills are defined.

GP 2.1.5 Identify and make available resources to perform the process according to plan.

The human and infrastructure resources necessary for performing the process are identified, made available, allocated, and used.

The information necessary to perform the process is identified and made available.

GP 2.1.6 Manage the interfaces between involved parties.

The individuals and groups involved in the process performance are determined.

Responsibilities of the involved parties are assigned.

Interfaces between the involved parties are managed.

Communication is ensured between the involved parties.

Communication between the involved parties is effective.

Generic Resources for PA 2.1

Human resources with identified objectives, responsibilities and authorities; [PA 2.1 Achievement a, d, e, f]

Facilities and infrastructure resources; [PA 2.1 Achievement a, d, e, f]

- Planning, management and control tools, including time and cost reporting, and feedback; [PA 2.1 Achievement b, c]
- Workflow management system; [PA 2.1 Achievement d, f]
- Email and/or other communication mechanisms; [PA 2.1 Achievement d, f]
- Information and/or experience repository; [PA 2.1 Achievement b, e]
- Problem and issue management mechanisms. [PA 2.1 Achievement c]

Generic Inputs/Outputs for PA 2.1

8-00 Plan [PA 2.1 Achievement a, b, c, d, e, f]

- Defines objectives to perform the process.
- Describes assumptions and constraints considered in defining the objectives.
- Includes milestones and timetable to produce the outputs of the process.
- Identifies tasks, resources, responsibilities and infrastructure needed to perform the process.
- Considers risks related to fulfil defined objectives.
- Identifies stakeholders and communication mechanisms to be used.
- Describes how the plan is controlled and adjusted when needed.

13-00 Record [PA 2.1 Achievement c, d, e, f]

- States results achieved or provide evidence of activities performed in a process.
- Provides evidence of communication, meetings, reviews and corrective actions.
- Contains status information about corrective actions; schedule and work breakdown structure.
- Monitors identified risks.

15-00 Report [PA 2.1 Achievement b, c]

- Monitors process performance against defined objectives and plans.
- Identifies deviations in process performance.
- Describes results and status of the process.
- Provides evidence of management activities.

PA 2.2 Work product management attribute

The work product management attribute is a measure of the extent to which the work products produced by the process are appropriately managed. As a result of full achievement of this attribute:

- a) requirements for the work products of the process are defined;
- b) requirements for documentation and control of the work products are defined;
- c) work products are appropriately identified, documented, and controlled;
- d) work products are reviewed in accordance with planned arrangements and adjusted as necessary to meet requirements.

Requirements for documentation and control of work products may include requirements for the identification of changes and revision status, approval and re-approval of work products, and the creation of relevant versions of applicable work products available at points of use.

NOTE The work products referred to in this clause are those that result from the achievement of the process outcomes.

Generic Practices for PA 2.2

GP 2.2.1 Define the requirements for the work products. The requirements for the outputs to be produced are defined. Requirements may include defining contents and structure. Quality criteria of the outputs are identified. Appropriate review and approval criteria for the outputs are defined.
GP 2.2.2 Define the requirements for documentation and control of the outputs. Requirements for the documentation and control of the outputs are defined. Such requirements may include requirements for (1) distribution, (2) identification of outputs and their components (3) traceability. Dependencies between outputs are identified and understood. Requirements for the approval of outputs to be controlled are defined.
GP 2.2.3 Identify, document and control the outputs. The outputs to be controlled are identified. Change control is established for the outputs. The outputs are documented and controlled in accordance with requirements. Versions of outputs are assigned to product configurations as applicable. The outputs are made available through appropriate access mechanisms. The revision status of the outputs may readily be ascertained.
GP 2.2.4 Review and adjust outputs to meet the defined requirements. Outputs are reviewed against the defined requirements in accordance with planned arrangements. Issues arising from outputs reviews are resolved.

Generic Resources for PA 2.2

- Requirement management method/toolset; [PA 2.2 Achievement a, b, c]
- Configuration management system; [PA 2.2 Achievement b, c]
- Documentation elaboration and support tool; [PA 2.2 Achievement b, c]
- Output review methods and experiences; [PA 2.2 Achievement d]
- Intranets, extranets and/or other communication mechanisms; [PA 2.2 Achievement b, c]
- Problem and issue management mechanisms. [PA 2.2 Achievement d]

Generic Inputs/Outputs for PA 2.2

8-00 Plan [PA 2.2 Achievement b]

- Expresses selected policy or strategy to manage outputs.
- Describes requirements to develop, distribute, and maintain the outputs.
- Defines quality control actions needed to manage the quality of the outputs.

23-00 Procedure [PA 2.2 Achievement d]

- Output review methods and experiences.
- Review management method/toolset.

13-00 Record [PA 2.2 Achievement b, c, d]

- Demonstrates output reviews and contributes to traceability.

- Records the status of documentation or output.
- Contains and makes available outputs and/or configuration items.
- Supports monitoring of changes to outputs.
- Provides evidence that the changes are under control.
- Supports monitoring of changes to outputs.

25-00 Specification [PA 2.2 Achievement a, b]

- Defines the functional and non-functional requirements for outputs.
- Identifies outputs dependencies.
- Identifies approval criteria for documents.
- Defines the attributes associated with outputs to be created.

Level 3: Established process

The described previously *Managed process* is now implemented using a defined process capable of achieving its process outcomes.

The following attributes of the process demonstrate the achievement of this level:

PA 3.1 Process definition attribute

The process definition attribute is a measure of the extent to which a standard process is maintained to support the deployment of the defined process. As a result of full achievement of this attribute:

- a) a standard process, including appropriate tailoring guidelines, is defined that describes the fundamental elements that must be incorporated into a defined process;
- b) the sequence and interaction of the standard process with other processes are determined;
- c) required competencies and roles for performing a process are identified as part of the standard process;
- d) required infrastructure and work environment for performing a process are identified as part of the standard process;
- e) suitable methods for monitoring the effectiveness and suitability of the process are determined.

NOTE A standard process may be used as-is when deploying a defined process, in which case tailoring guidelines would not be necessary.

Generic Practices for PA 3.1

GP 3.1.1 Define the standard process that will support the deployment of the defined process.

A standard process is developed that includes the fundamental process elements.

The standard process identifies the deployment needs and deployment context.

Guidance and/or procedures are provided to support implementation of the process as needed.

Appropriate tailoring guideline(s) are available as needed.

GP 3.1.2 Determine the sequence and interaction between processes so that they work as an integrated system of processes.

The standard process's sequence and interaction with other processes are determined.

Deployment of the standard process as a defined process maintains integrity of processes.

GP 3.1.3 Identify the roles and competencies for performing the standard process.

Process performance roles are identified.

Competencies for performing the process are identified.

GP 3.1.4 Identify the required infrastructure and work environment for performing the standard process.

Process infrastructure components are identified (facilities, tools, networks, methods, etc.).

Work environment requirements are identified.

GP 3.1.5 Determine suitable methods to monitor the effectiveness and suitability of the standard process.

Methods for monitoring the effectiveness and suitability of the process are determined.

Appropriate criteria and data needed to monitor the effectiveness and suitability of the process are defined.

The need to establish the characteristics of the process is considered.

The need to conduct internal audit and management review is established.

Process changes are implemented to maintain the standard process.

Generic Resources for PA 3.1

- Process modelling methods/tools; [PA 3.1 Achievement a, b, c, d]
- Training material and courses; [PA 3.1 Achievement a, b, c]
- Resource management system; [PA 3.1 Achievement b, c]
- Process infrastructure; [PA 3.1 Achievement a, b]
- Audit and trend analysis tools; [PA 3.1 Achievement e]
- Process monitoring method. [PA 3.1 Achievement e]

Generic Inputs/Outputs for PA 3.1

22-00 Description [PA 3.1 Achievement a, b, c, e]

- Describes the standard process, including the fundamental process elements, interactions with other processes and appropriate tailoring guidelines.
- Addresses the performance, management and deployment of the process, as described by capability levels 1 and 2 and the PA 3.2 Process deployment attribute. Addresses methods to monitor process effectiveness and suitability.
- Identifies data and records to be collected when performing the defined process, in order to improve the standard process.
- Identifies and communicates the personnel competencies, roles and responsibilities for the standard and defined process.
- Identifies the personnel performance criteria for the standard and defined process.
- Identifies the tailoring guidelines for the standard process.

8-00 Plan [PA 3.1 Achievement c, d]

- Identifies approaches for defining, maintaining and supporting a standard process, including infrastructure, work environment, training, internal audit, and management review.

23-00 Procedure [PA 3.1 Achievement a, b, c, d, e]

- Provides evidence of organizational commitment to maintain a standard process to support the deployment of the defined process.

- Identifies the method to execute a step or activity in the standard process to support the deployment of the defined process.

25-00 Specification [PA 3.1 Achievement a]

- Provides reference for the standards used by the standard process and identification about how they are used.
- Provides a basis to analyse data associated with the performance of the defined process.

PA 3.2 Process deployment attribute

The process deployment attribute is a measure of the extent to which the standard process is effectively deployed as a defined process to achieve its process outcomes. As a result of full achievement of this attribute:

- a defined process is deployed based upon an appropriately selected and/or tailored standard process;
- required roles, responsibilities and authorities for performing the defined process are assigned and communicated;
- personnel performing the defined process are competent on the basis of appropriate education, training, and experience;
- required resources and information necessary for performing the defined process are made available, allocated and used;
- required infrastructure and work environment for performing the defined process are made available, managed and maintained;
- appropriate data are collected and analysed as a basis for understanding the behaviour of, and to demonstrate the suitability and effectiveness of the process, and to evaluate where continuous improvement of the process can be made.

NOTE Competency results from a combination of knowledge, skills, and personal attributes that are gained through education, training, and experience.

Generic Practices for PA 3.2

GP 3.2.1 Deploy a defined process that satisfies the context specific requirements of the use of the standard process. The defined process is appropriately selected and/or tailored from the standard process. Conformance of defined process with standard process requirements is verified.
GP 3.2.2 Assign and communicate roles, responsibilities, and authorities for performing the defined process. The roles for performing the defined process are assigned and communicated. The responsibilities and authorities for performing the defined process are assigned and communicated.
GP 3.2.3 Ensure necessary competencies for performing the defined process. Appropriate competencies for assigned personnel are identified. Suitable training is available for those deploying the defined process.
GP 3.2.4 Provide resources and information to support the performance of the defined process. Required human resources are made available, allocated and used. Required information to perform the process is made available, allocated and used.

GP 3.2.5 Provide adequate process infrastructure to support the performance of the defined process.

Required infrastructure and work environment is available.

Organizational support to effectively manage and maintain the infrastructure and work environment is available.

Infrastructure and work environment is used and maintained.

GP 3.2.6 Collect and analyse data about performance of the process to demonstrate its suitability and effectiveness.

Data required to understand the behaviour, suitability and effectiveness of the defined process are identified.

Data are collected and analysed to understand the behaviour, suitability and effectiveness of the defined process.

Results of the analysis are used to identify where continual improvement of the standard and/or defined process can be made.

Generic Resources for PA 3.2

- Feedback mechanisms (customer, staff, other stakeholders); [PA 3.2 Achievement f]
- Process repository; [PA 3.2 Achievement a, b]
- Resource management system; [PA 3.2 Achievement b, c, d]
- Knowledge management system; [PA 3.2 Achievement d]
- Problem and change management system; [PA 3.2 Achievement f]
- Work environment and infrastructure; [PA 3.2 Achievement e]
- Data collection analysis system; [PA 3.2 Achievement f]
- Process assessment framework; [PA 4.1 Achievement f]
- Audit/review system. [PA 3.2 Achievement f]

Generic Inputs/Outputs for PA 3.2

22.0 Description [PA 3.2 Achievement a]

- Describes the defined process.
- Describes the verification activities needed to ensure the conformance of the defined process with the organization's standard process.
- Represents the interactions of the defined process with other processes.

8-00 Plan [PA 3.2 Achievement a, b, f]

- Expresses the strategy for the organizational support, allocation and use of the process infrastructure.
- Describes the resources and the elements of the infrastructure needed to deploy the defined process.
- Expresses the strategy to satisfy the service's training needs.
- Identifies process improvement proposal(s) based on analysis of suitability and effectiveness.

13-00 Record [PA 3.2 Achievement c, d, e, f]

- Is used to support and maintain the standard process assets.
- Provides evidence that the service's defined process performance data was collected.

- Provides evidence that the service personnel possess the required authorities, skills, experience, and knowledge.
- Provides evidence that personnel have received the required training.
- Provides evidence that infrastructure and working environment are made available and maintained for performing the defined process.
- Records the status of required corrective actions.
- Captures the work breakdown structure needed to define the tasks and their dependencies.
- Provides evidence that information is made available for performing the defined process.

15-00 Report [PA 3.2 Achievement f]

- Provides results of the analysis, recommended corrective action, feedback to the process owner, and to the organization's standard process.
- Identifies improvement opportunities of the defined process.
- Provides evidence on the suitability and effectiveness of the defined process.

Level 4: Predictable process

The described previously Established process now operates within defined limits to achieve its process outcomes.

The following attributes of the process demonstrate the achievement of this level:

PA 4.1 Process measurement attribute

The process measurement attribute is a measure of the extent to which measurement results are used to ensure that performance of the process supports the achievement of relevant process performance objectives in support of defined business goals. As a result of full achievement of this attribute:

- a) process information needs in support of relevant business goals are established;
- b) process measurement objectives are derived from identified process information needs;
- c) quantitative objectives for process performance in support of relevant business goals are established;
- d) measures and frequency of measurement are identified and defined in line with process measurement objectives and quantitative objectives for process performance;
- e) results of measurement are collected, analysed and reported in order to monitor the extent to which the quantitative objectives for process performance are met;
- f) measurement results are used to characterize process performance.

NOTE 1 Information needs may typically reflect management, technical, service, process, or product needs.

NOTE 2 Measures may be either process measures or product measures or both.

Generic Practices for PA 4.1

GP 4.1.1 Identify process information needs, in relation with business goals.

Business goals relevant to establishing quantitative process measurement objectives for the process are identified.

Process stakeholders are identified and their information needs are defined.

Information needs support the relevant business goals.

GP 4.1.2 Derive process measurement objectives from process information needs. Process measurement objectives to satisfy defined process information needs are defined.
GP 4.1.3 Establish quantitative objectives for the performance of the defined process, according to the alignment of the process with the business goals. Process performance objectives are defined to explicitly reflect the business goals. Process performance objectives are verified with organizational management and process owner(s) to be realistic and useful.
GP 4.1.4 Identify product and process measures that support the achievement of the quantitative objectives for process performance. Detailed measures are defined to support monitoring, analysis and verification needs of process and product goals. Measures to satisfy process measurement and performance objectives are defined. Frequency of data collection is defined. Algorithms and methods to create derived measurement results from base measures are defined, as appropriate. Verification mechanism for base and derived measures is defined.
GP 4.1.5 Collect product and process measurement results through performing the defined process. Data collection mechanism is created for all identified measures. Required data are collected in an effective and reliable manner. Measurement results are created from the collected data within defined frequency. Analysis of measurement results is performed within defined frequency. Analysis results including assumptions are reported to those responsible for monitoring the extent to which qualitative objectives are met.
GP 4.1.6 Use the results of the defined measurement to monitor and verify the achievement of the process performance objectives. Statistical or other techniques are used to quantitatively understand process performance and capability within defined control limits. Trends of process behaviour are identified.

Generic Resources for PA 4.1

- Management information (cost, time, reliability, profitability, customer benefits, risks etc.); [PA 4.1 Achievement a, c, d, e, f]
- Applicable measurement techniques; [PA 4.1 Achievement d]
- Process measurement tools and results databases; [PA 4.1 Achievement d, e, f]
- Process measurement framework; [PA 4.1 Achievement d, e, f]
- Tools for data analysis and measurement. [PA 4.1 Achievement b, c, d, e]
- Process measurement framework [PA 4.1 e]

Generic Inputs/Outputs for PA 4.1

22-00 Description [PA 4.1 Achievement a, d]

- Defines information needs for the process.
- Specifies candidate measures and frequency of measurement.

8-00 Plan [PA 4.1 Achievement b, c]

- Defines quantitative objectives for process performance.
- Specifies measures for the process.
- Defines tasks and schedules to collect and analyse data.
- Allocates responsibilities and resources for measurement.

13-00 Record [PA 4.1 Achievement e]

- Defines data to be collected as specified in plans and measures.

15-00 Report [PA 4.1 Achievement e, f]

- Provides results of process data analysis to identify process performance parameters.
- Monitors process performance based on results of measurement.

25-00 Specification [PA 4.1 Achievement a, b, d]

- Describes information needs and performance objectives.
- Provides a basis for analysing process performance.
- Defines explicit criteria for data validation.
- Defines frequency of data collection.

PA 4.2 Process control attribute

The process control attribute is a measure of the extent to which the process is quantitatively managed to produce a process that is stable, capable, and predictable within defined limits. As a result of full achievement of this attribute:

- a) suitable analysis and control techniques where applicable, are determined and applied;
- b) control limits of variation are established for normal process performance;
- c) measurement data are analysed for special causes of variation;
- d) corrective actions are taken to address special causes of variation;
- e) control limits are re-established (as necessary) following corrective action.

Generic Practices for PA 4.2

GP 4.2.1 Determine analysis and control techniques, appropriate to control the process performance. Process control analysis techniques are defined. Selected techniques are validated against process control objectives.
GP 4.2.2 Define parameters suitable to control the process performance. Standard process definition is modified to include selection of parameters for process control. Control limits for selected base and derived measurement results are defined.

GP 4.2.3 Analyse process and product measurement results to identify variations in process performance.

Measures are used to analyse process performance.

All situations are recorded when defined control limits are exceeded.

Each out-of-control case is analysed to identify potential cause(s) of variation.

Assignable causes of variation in performance are determined.

Results are provided to those responsible for taking action.

GP 4.2.4 Identify and implement corrective actions to address assignable causes.

Corrective actions are determined to address each assignable cause.

Corrective actions are implemented to address assignable causes of variation.

Corrective action results are monitored.

Corrective actions are evaluated to determine their effectiveness.

GP 4.2.5 Re-establish control limits following corrective action.

Process control limits are re-calculated (as necessary) to reflect process changes and corrective actions.

Generic Resources for PA 4.2

- Process control and analysis techniques; [PA 4.2 Achievement a, c]
- Statistical analysis tools; [PA 4.2 Achievement b, c, e]
- Process control tools. [PA 4.2 Achievement d, e]

Generic Inputs/Outputs for PA 4.2

22-00 Description [PA 4.2 Achievement b, e]

- Defines parameters for process control.
- Defines and maintains control limits for selected base and derived measurement results.

8-00 Plan [PA 4.2 Achievement a]

- Defines analysis methods and techniques at detailed level.

13-00 Record [PA 4.2 Achievement a, b, c, d, e]

- Provides measurement data to identify special causes of variation.
- Provides information on defects and problems.
- Records the changes.
- Documents corrective actions to be implemented.
- Monitors the status of corrective actions.
- Collects the data and provides the basis for analysis, corrective actions and results reporting.

15-00 Report [PA 4.2 Achievement a, c, d, e]

- Provides analysed measurement results of process performance.
- Identifies corrective actions to address assignable causes of variation.
- Ensures that selected techniques are effective and measures are validated.

Level 5: Optimizing process

The described previously Predictable process is continuously improved to meet relevant current and projected business goals.

The following attributes of the process demonstrate the achievement of this level:

PA 5.1 Process innovation attributes

The process innovation attribute is a measure of the extent to which changes to the process are identified from analysis of common causes of variation in performance, and from investigations of innovative approaches to the definition and deployment of the process. As a result of full achievement of this attribute:

- a) process improvement objectives for the process are defined that support the relevant business goals;
- b) appropriate data are analysed to identify common causes of variations in process performance;
- c) appropriate data are analysed to identify opportunities for best practice and innovation;
- d) improvement opportunities derived from new technologies and process concepts are identified;
- e) an implementation strategy is established to achieve the process improvement objectives.

Generic Practices for PA 5.1

GP 5.1.1 Define the process improvement objectives for the process that support the relevant business goals. Directions to process innovation are set. New business visions and goals are analysed to give guidance for new process objectives and potential areas of process change. Quantitative and qualitative process improvement objectives are defined and documented.
GP 5.1.2 Analyse measurement data of the process to identify real and potential variations in the process performance. Measurement data are analysed and made available. Causes of variation in process performance are identified and classified. Common causes of variation are analysed to get quantitative understanding of their impact.
GP 5.1.3 Identify improvement opportunities of the process based on innovation and best practices. Industry best practices are identified and evaluated. Feedback on opportunities for improvement is actively sought. Improvement opportunities are identified.
GP 5.1.4 Derive improvement opportunities of the process from new technologies and process concepts. Impact of new technologies on process performance is identified and evaluated. Impact of new process concepts are identified and evaluated. Improvement opportunities are identified. Emergent risks are considered in identifying improvement opportunities.

GP 5.1.5 Define an implementation strategy based on long-term improvement vision and objectives.

Commitment to improvement is demonstrated by organizational management and process owner(s).

Proposed process changes are evaluated and piloted to determine their benefits and expected impact on defined business objectives.

Changes are classified and prioritized based on their impact on defined improvement objectives.

Measures that validate the results of process changes are defined to determine expected effectiveness of the process change.

Implementation of the approved change(s) is planned as an integrated program or project.

Implementation plan and impact on business goals are discussed and reviewed by organizational management.

Generic Resources for PA 5.1

- Process improvement framework; [PA 5.1 Achievement a, d, e]
- Process feedback and analysis system (measurement data, causal analysis results etc.); [PA 5.1 Achievement b, c]
- Piloting and trialling mechanism. [PA 5.1 Achievement c, d]

Generic Inputs/Outputs for PA 5.1

22-00 Description [PA 5.1 Achievement c, d]

- Identifies potential areas of innovation and new technology.
- Incorporates approaches to perform root cause analysis.

8-00 Plan [PA 5.1 Achievement a, e]

- Defines improvement objectives for the process.
- Allocates resources for improvement activities.
- Schedules activities for root cause analysis.
- Defines an approach to implementing selected improvements.
- Identifies scope of pilot improvement activities.

23-00 Procedure [PA 5.2 Achievement a]

- Establishes expectations for conduct and evaluation of pilot improvements.

13-00 Record [PA 5.1 Achievement b, c, d, e]

- Provides analytical data to identify common causes of variation.
- Provides analytical data to identify opportunities for best practice and innovation.
- Records data relevant to root cause analysis.
- Identifies potential improvement opportunities.
- Records information on new technology and techniques.

15-00 Report [PA 5.1 Achievement b, d]

- Identifies potential innovations and process changes.
- Provides information for an analysis to identify common causes of variation in performance.
- Identifies common causes of defects and appropriate corrective actions.

25-00 Specification [PA 5.1 Achievement a]

- Define and maintain business goals.
- Provides evidence of management commitment.

PA 5.2 Process optimization attribute

The process optimization attribute is a measure of the extent to which changes to the definition, management and performance of the process result in effective impact that achieves the relevant process improvement objectives. As a result of full achievement of this attribute:

- a) impact of all proposed changes is assessed against the objectives of the defined process and standard process;
- b) implementation of all agreed changes is managed to ensure that any disruption to the process performance is understood and acted upon;
- c) effectiveness of process change on the basis of actual performance is evaluated against the defined product requirements and process objectives to determine whether results are due to common or special causes.

Generic Practices of PA 5.2

GP 5.2.1 Assess the impact of each proposed change against the objectives of the defined and standard process. Objective priorities for process improvement are established. Specified changes are assessed against product quality and process performance requirements and goals. Impact of changes to other defined and standard processes is considered.
GP 5.2.2. Manage the implementation of agreed changes to selected areas of the defined process and standard process according to the implementation strategy. A mechanism is established for incorporating accepted changes into the defined process(es) and standard process(es) effectively and completely. The factors that impact the effectiveness and full deployment of the process change are identified and managed, such as: — Economic factors (productivity, profit, growth, efficiency, quality, competition, resources, and capacity); — Human factors (job satisfaction, motivation, morale, conflict/cohesion, goal consensus, participation, training, span of control); — Management factors (skills, commitment, leadership, knowledge, ability, organizational culture and risks); — Technology factors (sophistication of system, technical expertise, development methodology, need of new technologies). Training is provided to users of the process. Process changes are effectively communicated to all affected parties. Records of the change implementation are maintained.
GP 5.2.3 Evaluate the effectiveness of process change on the basis of actual performance against process performance and capability objectives and business goals. Performance and capability of the changed process are measured and compared with historical data. A mechanism is available for documenting and reporting analysis results to management and owners of standard and defined processes. Measures are analysed to determine whether results are due to common or special causes. Other feedback is recorded, such as opportunities for further improvement of the standard process.

Generic Resources for PA 5.2

- Change management system; [PA 5.2 Achievement a, b, c]
- Process evaluation system (impact analysis, etc.). [PA 5.2 Achievement a, c]

Generic Inputs/Outputs for PA 5.2

22-00 Description [PA 5.2 Achievement b]

- Documents changes as a result of process improvement actions.

8-00 Plan [PA 5.2 Achievement a, b]

- Defines activities and schedule for pilot change implementation.
- Allocates resources for pilot implementation.
- Assigns responsibility for pilot implementation.
- Defines activities and schedule for organizational implementation of process change.
- Allocates resources and responsibilities for organizational implementation.
- Specifies scope of pilot implementation of proposed change.

13-00 Record [PA 5.2 Achievement b]

- Contains records of all completed and in-progress pilot implementations.
- Records history of and justification for changes.

15-00 Report [PA 5.2 Achievement a, b, c]

- Describes results of pilot implementation of process change.
- Evaluates effectiveness of process compared to process improvement objectives.
- Provides details on implementation of organizational changes.
- Describes proposed changes to standard and defined process.

25-00 Specification [PA 5.2 Achievement c]

- Specifies measures derived from process improvement objectives.

C.7 Conformity of the exemplar Process Assessment Model

C.7.1 General

[Annex C](#) sets out a PAM that meets the requirements for conformance defined in ISO/IEC 15504-2. This PAM can be used in the performance of assessments that meet the requirements of ISO/IEC 15504. It may also be used as an example for a PAM developer.

This clause serves as the statement of conformance of the PAM to the requirements defined in ISO/IEC 15504-2. For ease of reference, the requirements from ISO/IEC 15504-2, 6.3 are embedded verbatim in the text of this Clause. They should not be construed as normative elements of this part of ISO/TR 80001.

Since this PAM has been explicitly constructed to be an elaboration of the PRM defined in IEC 80001-1, the conformance claim is relatively simple. For other models, particularly ones with a different architecture, the demonstration of conformance may be more difficult requiring more detail in the mapping.
