AEROSPACE MATERIAL SPECIFICATION

SAE AMS-2373

REV
A

Issued 1970-11-01

Revised 1991-01-01

Superseding AMS-2373

Submitted for recognition as an American National Standard

QUALITY ASSURANCE SAMPLING OF BOLTS AND SCREWS

This specification has been declared "NONCURRENT" by the Aerospace Materials Division, SAE, as of May, 1990. It is recommended that this specification not be specified for new designs.

This cover sheet should be attached to the original issue of the subject specification.

Noncurrent refers to those procedures which have previously been widely used and which may be required on some existing designs in the future. The Aerospace Materials Division does not recommend these as standard procedures for future use in new designs. Each of these "Noncurrent" specifications is available on request.

This specification is under the jurisdiction of the AMS Committee "B".

SAE Technical Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.

QUALITY ASSURANCE SAMPLING OF BOLTS AND SCREWS

1. **APPLICATION:** To provide users of Aerospace Material Specifications (AMS), Aerospace Material Documents (AMD), and other specifications in which this specification is referenced, quality assurance procedures which may be used to determine conformance to applicable specification requirements of bolts and screws.
 - 1.1 In the event of a conflict between the requirements specified herein and the requirements of a particular specification for bolts and screws, the following rules shall apply:
 - 1.1.1 When the requirements of the parts specification are more stringent, they shall take precedence.
 - 1.1.2 When the requirements of this AMS are more stringent, they shall take precedence.
 - 1.1.3 If any tests mentioned in Table I are not required by the parts specification, they shall not be considered a requirement.
 - 1.1.4 When instructions are issued by the purchaser regarding quality assurance sampling procedures, such instructions shall take precedence over the requirements of either this specification or the particular specification in which this specification is invoked.
2. **RESPONSIBILITY FOR TESTS:** The vendor shall supply all samples and shall be responsible for accomplishing the required tests (See Note 1). Results of tests shall be reported to the purchaser as required by the applicable material specification.
3. **TESTING:** Test methods shall be in accordance with the applicable requirements of MIL-STD-1312 and as otherwise specified in the applicable parts specification or the drawing. If a test method is not specified, the method of test shall be as agreed upon by purchaser and vendor.
4. **REQUIREMENTS:**
 - 4.1 **Inspection Lot:** An inspection lot shall be as defined in 4.1.1 or 4.1.2, the applicable definition being as specified in Table I for the type of test and the product being tested.
 - 4.1.1 An inspection lot shall consist of all material identifiable to a single heat or melt. When the material is produced by the consumable electrode remelt method, the lot shall consist of all material produced from consumable electrode remelted ingots originally melted in a single furnace charge.
 - 4.1.2 An inspection lot shall consist of all parts of the same nominal dimensions except length, produced from the same size stock of the same composition from a single heat, heat-treated as a batch or sequentially heat treated in a continuous furnace in not more than 8 consecutive hours.
 - 4.2 **Location of Sample:**
 - 4.2.1 The test sample shall consist of randomly selected pieces of the product.
 - 4.2.2 The test sample shall consist of parts randomly selected from each inspection lot.
