

AEROSPACE MATERIAL SPECIFICATION

Submitted for recognition as an American National Standard

SAE

AMS 3041C

Issued MAR 1974
Revised AUG 1996

Superseding AMS 3041B

MAGNETIC PARTICLES, NONFLUORESCENT Wet Method, Oil Vehicle, Ready-to-Use

1. SCOPE:

1.1 Form:

This specification covers nonfluorescent magnetic particles in the form of a mixed, ready-to-use suspension in an odorless inspection oil vehicle.

1.2 Application:

These products have been used typically as the inspection medium in a wet magnetic particle inspection system in accordance with ASTM E 1444, but usage is not limited to such application.

1.3 Safety - Hazardous Materials:

While the materials, methods, applications, and processes described or referenced in this specification may involve the use of hazardous materials, this specification does not address the hazards which may be involved in such use. It is the sole responsibility of the user to ensure familiarity with the safe and proper use of any hazardous materials and to take necessary precautionary measures to ensure the health and safety of all personnel involved.

2. APPLICABLE DOCUMENTS:

The following publications form a part of this specification to the extent specified herein. The latest issue of SAE publications shall apply. The applicable issue of other publications shall be the issue in effect on the date of the purchase order.

2.1 SAE Publications:

Available from SAE, 400 Commonwealth Drive, Warrendale, PA 15096-0001.

AMS 2641 Vehicle, Magnetic Particle Inspection, Petroleum Base

AMS 2825 Material Safety Data Sheets

SAE J438 Tool and Die Steels

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.

MIL-STD-2073-1 DOD Materiel, Procedures for Development and Application of Packaging Requirements

3. TECHNICAL REQUIREMENTS:

3.1 Material:

The product shall be composed of durable magnetic particles, suitable for long-time use, which may have been treated to attain the color specified. Particles shall be supplied ready-to-use, mixed in the proper proportion with odorless inspection oil conforming to AMS 2641, or equivalent.

3.2 Storage Life:

The product shall meet the requirements specified in 3.3 when tested at any time up to twelve months from date of manufacture.

3.3 Properties:

The product shall conform to the following requirements; tests shall be performed on the product supplied and in accordance with specified test procedures.

3.3.1 Contamination: The product shall show no evidence of foreign material, agglomeration, or scum, determined by visual examination of the test suspension at the following times:

3.3.1.1 Immediately after mixing the test suspension.

3.3.1.2 After mixing the test suspension, allowing it to stand for not less than 30 minutes, and agitating it slightly.

3.3.1.3 During tests to determine other characteristics of the product.

3.3.2 Concentration: The concentration of magnetic particles in the vehicle shall be 1.0 to 2.4 mL of
(R) magnetic particles in 100 mL of suspension, determined by mixing the suspension thoroughly, filling a 100 mL calibrated centrifuge tube as specified in ASTM D 96, demagnetizing, allowing to stand undisturbed for at least 60 minutes, and reading, on the calibrated tube, the volume of particles settled from the suspension.

3.3.3 Sensitivity: The product shall show not less than a six-hole indication of the ring test specimen
(R) prepared in accordance with 4.4, determined as follows:

3.3.3.1 Place the ring on a 1-inch (25-mm) diameter copper bar and circularly magnetize in a standard magnetic particle inspection unit by passing 2500 amperes of direct current through the bar immediately before flushing the ring with the agitated test suspension which has passed the concentration, and contamination tests. Examine the ring under a white light of not less than 100 foot-candles (1075 lx) at the examining surface.

3.4 Color: The color of the magnetic particles in suspension shall be black, red, gray, or as specified by purchaser, determined by observing a well-dispersed sample of the test suspension in a glass container under a white light of not less than 100 foot-candles (1075 lx) at the examining surface.

3.5 Particle Size: The magnetic particles shall be of such size that not less than 98% by weight shall
(R) pass through a 3-inch (76-mm) diameter U.S. Standard No. 325 (45 μ m) sieve, as defined in ASTM E 11, determined by passing a 1-quart (1-L) sample of agitated test suspension through the sieve. After the test suspension vehicle has completely passed through the sieve, rinse with 1 quart (1 L) of the original AMS 2641 vehicle. Dry the sieve to remove all liquid and determine the weight of the residual particulate material not passing through the sieve. A comparison sample shall be obtained by passing 1 quart (1 L) of agitated suspension through a preweighed #2 Whatman filter paper, or equivalent. Dry the filter and retained particles to remove all liquid and re-weigh. The weight of the particles retained on the sieve shall not be greater than 2% of the weight of particles retained on the filter paper.

3.6 Mechanical Durability: Magnetic particles shall retain their initial sensitivity, color, and brightness
(R) of indication after placing not less than 400 mL of agitated suspension in a 1 quart (1 L) capacity, constant speed blender, operating the blender at approximately 10,000 to 12,000 rpm for a total of 10 minutes in 2-minute intervals, allowing the suspension to cool for 5 minutes during each period between stirring cycles and, at the end of the cumulative 10 minutes blending, conducting the sensitivity tests (See 3.3.3).

4. QUALITY ASSURANCE PROVISIONS:

4.1 Responsibility for Inspection:

The manufacturer of the product shall supply all samples for manufacturer's tests and shall be responsible for the performance of all required tests. Purchaser reserves the right to sample and to perform any confirmatory testing deemed necessary to ensure that the product conforms to specified requirements.

4.2 Classification of Tests:

- 4.2.1 Acceptance Tests: Contamination (3.3.1), concentration (3.3.2), sensitivity (3.3.3), color (3.4), and particle size (3.5) are acceptance tests and shall be performed on each lot.
(R)
- 4.2.2 Periodic Tests: Mechanical durability (3.6) is a periodic test and shall be performed at a frequency selected by the manufacturer unless frequency of testing is specified by purchaser.
(R)
- 4.2.3 Preproduction Tests: All technical requirements are preproduction tests and shall be performed prior to or on the initial shipment of a product to a purchaser, when a change in ingredients and/or processing requires reapproval as in 4.5.2, and when purchaser deems confirmatory testing to be required.
- 4.2.3.1 For direct U.S. Military procurement, substantiating test data and, when requested, preproduction test material shall be submitted to the cognizant agency as directed by the procuring activity, contracting officer, or request for procurement.

4.3 Sampling and Testing:

Shall be as follows:

- 4.3.1 For Acceptance Tests: Sufficient product shall be taken at random from each lot to perform all required tests. The number of determinations for each requirement shall as specified in the applicable test procedures or, if not specified therein, not less than three.
- 4.3.1.1 A lot shall be all product produced in a single production run from the same batch of raw materials under the same fixed conditions and presented for vendor's inspection at one time.
- 4.3.1.2 A statistical sampling plan, acceptable to purchaser, may be used in lieu of sampling as in
(R) 4.3.1.
- 4.3.2 For Periodic and Preproduction Tests: As agreed upon by purchaser and manufacturer.

4.4 Tool Steel Test Ring:

- 4.4.1 Material: Shall be hot rolled tool steel, O1 series conforming to SAE J438, or equivalent. Shall be manufactured from 5.5 inch (140 mm) minimum diameter, round bar stock.
(R)
- 4.4.2 Configuration: Ring configuration, dimensions, and surface finish shall be in accordance with Figure 1. Ring shall have nine side-drilled holes; additional holes may be specified by purchaser.
(R)
- 4.4.3 Heat Treatment of Test Ring:
- 4.4.3.1 Prior to machining, each bar shall be normalized by heating slowly to 1500 °F ± 100 (816 °C ± 56), holding at heat for 60 minutes ± 5 per inch (25 mm) of diameter, heating to 1600 °F ± 100 (857 °C ± 56), holding at heat for 60 minutes ± 5 per inch (25 mm) of diameter, and air cooling.

- 4.4.3.2 Ring shall be annealed, after machining, by heating to 1425 to 1500 °F (774° C to 802 °C), holding at heat for 60 minutes $\pm$ 5 , cooling at a rate of not more than 40 F $\pm$ 4 (22 C $\pm$ 2) degrees per hour to 1000 °F $\pm$ 100 (538 °C $\pm$ 56) or below, and furnace or air cooling to room temperature.
- 4.4.4 Surface oxidation, caused by annealing or normalizing, may be removed by dry blasting using
(R) either glass beads or aluminum oxide at 25 to 40 psi (172 to 276 kPa). Protect part from rust by applying a coating of oil or grease.
- 4.4.5 Hardness: Hardness, after annealing as in 4.4.3.2, shall be 90 to 95 HRB, or equivalent,
(R) determined in accordance with ASTM E 18.
- 4.5 Approval:
- 4.5.1 Sample product shall be approved by purchaser before product for production use is supplied, unless such approval be waived by purchaser. Results of tests on production product shall be essentially equivalent to those on the approved sample.
- 4.5.2 Vendor shall use ingredients, manufacturing procedures, processes, and methods of inspection on production product that are essentially the same as those used on the approved sample. If necessary to make any change in ingredients, processing techniques, or manufacturing procedures, vendor shall submit for reapproval a statement of the proposed changes in ingredients and/or processing and, when requested, sample product. Production product made by the revised procedure shall not be shipped prior to receipt of reapproval.
- 4.6 Reports:
(R) The vendor of the product shall furnish with each shipment a report stating that the product conforms to all technical requirements. This report shall include the purchase order number, lot number, AMS 3041 C, manufacturer's material designation, date of manufacture, and quantity.
- 4.6.1 A material safety data sheet conforming to AMS 2825, or equivalent, shall be supplied to each purchaser prior to, or concurrent with, the report of preproduction test results or, if preproduction testing be waived by purchaser, concurrent with the first shipment of the product for production use. Each request for modification of product formulation shall be accompanied by a revised data sheet for the proposed formulation.
- 4.7 Resampling and Retesting:
- If any sample used in the above tests fails to meet specified requirements, disposition of the product may be based on the results of testing three additional samples for each nonconforming sample. Failure of any retest sample to meet specified requirements shall be cause for rejection of the product represented. Results of all tests shall be reported.

5. PREPARATION FOR DELIVERY:

5.1 Packaging and Identification:

- 5.1.1 Magnetic particles in the form of a mixed, ready-to-use suspension shall be packaged in containers of a type and size agreed upon by purchaser and vendor.
- 5.1.2 A lot of particles may be packaged in small quantities and delivered under the basic lot approval provided lot identification is maintained.
- 5.1.3 Each container shall be identified, with a durable label that is legible on receipt by purchaser, with not less than the following information:

MAGNETIC PARTICLES, NONFLUORESCENT, WET METHOD, OIL VEHICLE,
READY-TO-USE

AMS 3041 C

COLOR

MANUFACTURER'S IDENTIFICATION _____

DATE OF MANUFACTURE _____ *

LOT NUMBER _____

QUANTITY _____

MANUFACTURER'S INSTRUCTIONS FOR USE _____ **

APPROPRIATE WARNINGS OR PRECAUTIONARY NOTICES _____

* May be included in manufacturer's identification or lot number.

** May be on a separate sheet.

- 5.1.4 Individual packages or containers shall be packed in an exterior shipping container capable of protecting the product, during shipment and storage, against damage from exposure to moisture, weather, or any other normal hazard.
- 5.1.5 Containers of the product shall be prepared for shipment in accordance with commercial practice and in compliance with applicable rules and regulations pertaining to the handling, packaging, and transportation of the product to ensure carrier acceptance and safe delivery.
- 5.1.6 For direct U.S. Military procurement, packaging shall be in accordance with MIL-STD-2073-1, (R) Level C, unless Level A is specified in the request for procurement.

6. ACKNOWLEDGMENT:

A vendor shall mention this specification number and its revision letter in all quotations and when acknowledging purchase orders to this specification.

7. REJECTIONS:

Product not conforming to this specification, or to modifications authorized by purchaser, will be subject to rejection.
