SILICONE (VMQ) RUBBER Lubricating Oil and Compression Set Resistant 65 - 75

1. SCOPE:

- 1.1 Form: This specification covers a silicone (VMQ) rubber in the form of sheet, strip, tubing, extrusions, and molded shapes.
- 1.2 Application: Primarily for rubber-like parts required to operate or seal from -55° to +230°C (-65° to +450°F), compounded especially for aircraft piston engine oil resistance and low compression set. Silicone elastomer is resistant to deterioration by weathering and by high-aniline-point petroleum-base oils and remains flexible over the temperature range noted. This material is not normally suitable for use in contact with gasoline or aromatic fuels and low-aniline-point petroleum-base fluids due to excessive swelling of the elastomer.

2. APPLICABLE DOCUMENTS: The following publications form a part of this specification to the extent specified herein. The latest issue of Aerospace Material Specifications shall apply. The applicable issue of other documents shall be as specified in AMS 2350.
