2. COMPOSITION:	Aluminum	99.0 min
	Iron + Silicon	1.0 max
	Copper	0.2 max
	Manganese	0.10 max
	Zinc	0.10 max
	Other Impurities, each	0.05 max
	Other Impurities, total	0.15 max

3. **CONDITION:** (a) Soft, conforming to the following physical properties when test specimens are cut across the direction of rolling, except from strips less than 9 inches wide which may be cut lengthwise:

Thickness inch	Tensile Strength lb per sq in., max	Elongation % in 2 in., min
0.006 - 0.019	15,500	15

(b) The material shall not crack when cold bent flat on itself with the axis of the bend parallel to the direction of rolling.

4. **QUALITY:** The material shall be uniform in quality and temper, commercially flat, clean, sound, smooth, and free from buckles, seams, cracks, laminations, blisters, and other injurious defects within the limits of best commercial manufacturing practices. Material revealing defects during fabrication is subject to rejection.

5. **TOLERANCES:** The following variations in standard thicknesses are permissible for the widths shown:
