RATIONALE

AMS 4152M has been revised to eliminate the non-mandatory hardness requirement, moving it to the notes section consistent with similar AMS, is a Five Year Review and update of this specification

1. SCOPE

1.1 Form

This specification covers an aluminum alloy in the form of extruded bars, rods, wire, shapes, and tubing.

1.2 Application

These products have been used typically for parts requiring good strength and whose fabrication does not involve welding, but usage is not limited to such applications.

- 1.2.1 Certain processing procedures may cause these products to become susceptible to stress-corrosion cracking; ARP823 recommends practices to minimize such conditions.

2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.
