Society of Automotive Engineers, Inc.

400 COMMONWEALTH DRIVE, WARRENDALE, PA. 15096

## SPECIFICATION

### AMS 4167D

Superseding AMS 4167C

Issued 4-15-67

Revised 7-15-78

UNS A97075

#### ALUMINUM ALLOY EXTRUSIONS

5.6Zn - 2.5Mg - 1.6Cu - 0.23Cr (7075-T73511)

Stress-Relief Stretched and Straightened

#### 1. SCOPE:

1.1 Form: This specification covers an aluminum alloy in the form of extruded bars, rods, wire, shapes, and tubing.

1.2 Application: Primarily for parts subject to excessive warpage during machining and for parts requiring high strength and resistance to stress-corrosion cracking.

2. APPLICABLE DOCUMENTS: The following publications form a part of this specification to the extent specified herein. The latest issue of Aerospace Material Specifications (AMS) shall apply. The applicable issue of other documents shall be as specified in AMS 2350.

2.1 SAE Publications: Available from Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096.

##### 2.1.1 Aerospace Material Specifications:

AMS 2205 - Tolerances, Aluminum-Base and Magnesium-Base Alloy Extrusions

AMS 2350 - Standards and Test Methods

AMS 2355 - Quality Assurance Sampling and Testing of Aluminum-Base and Magnesium-Base Alloys, Wrought Products (Except Forgings and Forging Stock) and Flash Welded Rings

AMS 2630 - Ultrasonic Inspection

2.2 ASTM Publications: Available from American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.

ASTM G47 - Testing Susceptibility to Stress Corrosion Cracking of High Strength 7XXX Aluminum Alloy Products

2.3 Government Publications: Available from Commanding Officer, Naval Publications and Forms Center, 5801 Tabor Avenue, Philadelphia, PA 19120.

##### 2.3.1 Military Specifications:

MIL-H-6088 - Heat Treatment of Aluminum Alloys

##### 2.3.2 Military Standards:

MIL-STD-649 - Aluminum and Magnesium Products, Preparation for Shipment and Storage

#### 3. TECHNICAL REQUIREMENTS:

SAE Technical Board rules provide that: "All technical reports, including standards approved and practices recommended, are advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. There is no agreement to adhere to any SAE standard or recommended practice, and no commitment to conform to or be guided by any technical report. In formulating and approving technical reports, the Board and its Committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against infringement of patents."

- 3.1 Composition: Shall conform to the following percentages by weight, determined in accordance with AMS 2355:

| Ø                       | min       | max  |
|-------------------------|-----------|------|
| Zinc                    | 5.1       | 6.1  |
| Magnesium               | 2.1       | 2.9  |
| Copper                  | 1.2       | 2.0  |
| Chromium                | 0.18      | 0.28 |
| Iron                    | --        | 0.50 |
| Silicon                 | --        | 0.40 |
| Manganese               | --        | 0.30 |
| Zirconium + Titanium    | --        | 0.25 |
| Titanium                | --        | 0.20 |
| Other Impurities, each  | --        | 0.05 |
| Other Impurities, total | --        | 0.15 |
| Aluminum                | remainder |      |

- 3.2 Condition: Solution heat treated, stress relieved by stretching to produce a nominal permanent set of 1.5%, but not less than 1% nor more than 3%, and precipitation treated. Heat treatments shall be performed in accordance with MIL-H-6088.

- 3.2.1 Extrusions may receive minor straightening, after stretching, of an amount necessary to meet the requirements of 3.5.

- 3.2.2 Extrusions shall be supplied with an as-extruded surface finish; light polishing to remove minor surface imperfections is permissible provided such imperfections can be removed within the dimensional tolerances.

- 3.3 Properties: Extrusions shall conform to the following requirements, determined in accordance with AMS 2355:

3.3.1 Tensile Properties:

- 3.1.1.1 Longitudinal: Shall be as specified in Table I and 3.3.1.4.

TABLE I

| Nominal Diameter or<br>Least Thickness, and Area<br>(bars, rods, wire, shapes) or<br>Nominal Wall Thickness and Area<br>(tubing)<br>Inches | Tensile<br>Strength<br>psi, min | Yield Strength<br>at 0.2% Offset<br>psi, min | Elongation<br>in 4D<br>%, min |

- 3.3.1.4 Tensile property requirements for product exceeding the size limits of 3.3.1.1, 3.3.1.2, and 3.3.1.3 shall be as agreed upon by purchaser and vendor.

3.3.2 Hardness: Should be not lower than 125 HB/10/500, 125 HB/14.3/1000, or 130 HB/10/1000 but extrusions shall not be rejected on the basis of hardness if the applicable tensile property requirements are met.

3.3.3 Conductivity:

3.3.3.1 If the conductivity is 40% IACS (International Annealed Copper Standard) or higher and the longitudinal tensile properties meet specified requirements, the product is acceptable.

3.3.3.2 If the conductivity is 38 - 39.9% IACS, the longitudinal tensile properties meet specified requirements, and the longitudinal yield strength does not exceed the specified minimum by more than 11,900 psi (82 MPa), the product is acceptable.

3.3.3.3 If the conductivity is lower than 40% IACS and the longitudinal yield strength exceeds the specified minimum by more than 11,900 psi (82 MPa), the product is suspect.

3.3.3.3.1 When the product is suspect, it may be reprocessed or a sample of the product may be solution heat treated for not less than 30 min. at  $870^{\circ}\text{F} \pm 10$  ( $465^{\circ}\text{C} \pm 5$ ) and quenched in cold water. Conductivity shall be measured within 15 min. after quenching. If this measurement exceeds the original measurement on the product by 6% IACS or more, the product is acceptable. If the difference is less than 6% IACS, the product shall be reprocessed.

3.3.3.4 If the conductivity is below 38% IACS, the product is not acceptable and shall be reprocessed, regardless of property level.

3.3.4 Stress-Corrosion Resistance: Specimens, cut from product 0.750 in. (19 mm) and over in nominal thickness processed to meet the requirements of 3.3.3 and stressed in the short-transverse (perpendicular to grain flow) direction to 75% of the specified minimum longitudinal (parallel to grain flow) yield strength shall meet the requirements of ASTM G47.

3.4 Quality: Extrusions, as received by purchaser, shall be uniform in quality and condition, sound, and free from foreign materials and from internal and external imperfections detrimental to usage of the extrusions.

3.4.1 When specified, extrusions shall be subjected to ultrasonic inspection in accordance with AMS 2630. Standards for acceptance shall be as agreed upon by purchaser and vendor.

3.5 Tolerances: Unless otherwise specified, tolerances shall conform to all applicable requirements of AMS 2205.

4. QUALITY ASSURANCE PROVISIONS:

4.1 Responsibility for Inspection: The vendor of extrusions shall supply all samples and shall be responsible for performing all required tests. Results of such tests shall be reported to the purchaser as required by 4.4. Purchaser reserves the right to perform such confirmatory testing as he deems necessary to ensure that the extrusions conform to the requirements of this specification.

4.2 Classification of Tests:

4.2.1 Acceptance Tests: Tests to determine conformance to composition (3.1), tensile properties (3.3.1), conductivity (3.3.3), ultrasonic inspection (3.4.1) when specified, and tolerance (3.5) requirements are classified as acceptance tests.

4.2.2 Periodic Tests: Tests to determine conformance to hardness (3.3.2) and to stress-corrosion resistance (3.3.4) requirements are classified as periodic tests.

4.3 Sampling: Shall be in accordance with AMS 2355; frequency and extent of sampling for periodic tests shall be as agreed upon by purchaser and vendor.
