RATIONALE

AMS4352K results from a Five-Year Review and update of this specification with changes to update general agreement wording to prohibit unauthorized exceptions (see 3.4, 3.7, and 8.4), relocate Definitions (see 2.4), update Applicable Documents (see Section 2), and allow the use of the immediate prior specification revision (see 8.3).

1. SCOPE

1.1 Form

This specification covers a magnesium alloy in the form of extruded bars, rods, wire, tubing, and profiles up to 40 square inches (258 cm²) in cross-sectional area (solids) and up to 8.5 inches (216 mm) OD by 1.188 inches (30.18 mm) wall thickness (tubing) (see 8.5).

1.2 Application

These extrusions have been used typically for parts requiring toughness and moderate abrasion resistance, but usage is not limited to such applications.

2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.

Terms used in AMS are defined in AS7766.

3. TECHNICAL REQUIREMENTS

3.1 Composition

Shall conform to the percentages by weight shown in Table 1, determined in accordance with AMS2355.

Table 1 - Composition

Element	Min	Max
Zinc	4.8	6.2
Zirconium	0.45	1.0
Impurities, each (see 3.1.1)	--	0.10
Impurities, total (see 3.1.1)	--	0.30
Magnesium	remainder	

3.1.1 Determination not required for routine acceptance.

3.2 Condition

Precipitation heat treated.

3.2.1 Extrusions shall be supplied with an as-extruded surface finish; light polishing to remove minor surface imperfections is permissible provided such imperfections can be removed within specified dimensional tolerances.

3.3 Heat Treatment

Extrusions shall be precipitation heat treated by heating to 300 °F ± 15 °F (149 °C ± 8 °C), holding at heat for not less than 24 hours, and cooling in air. Pyrometry shall be in accordance with AMS2750.

3.4 Properties

Extrusions shall conform to the requirements of 3.4.1 and 3.4.2. Mechanical property requirements for product outside of the ranges covered by 1.1 shall be agreed upon between the purchaser and producer and reported per 4.4.1 (see 8.5).

3.4.1 Tensile Properties

Shall be as specified in 3.4.1.1, 3.4.1.2, and 3.4.1.3, determined in accordance with AMS2355.

3.5 Quality

Extrusions, as received by the purchaser, shall be uniform in quality and condition, sound, and free from foreign materials and from imperfections detrimental to usage of the extrusions.
