AEROSPACE MATERIAL SPECIFICATION

AMS 5722C

Issued 7-1-48
Revised 10-1-82

UNS K63198
STEEL BARS, FORGINGS, AND RINGS, CORROSION AND HEAT RESISTANT
19.5Cr - 9.5Ni - 1.4Mo - 1.4W - 0.42(Cb + Ta) - 0.22Ti

This specification has been declared "NONCURRENT" by the Aerospace Materials Division, SAE, as of 9-27-72. It is recommended, therefore, that this specification not be specified for new designs.

This cover sheet should be attached to the "C" revision of the subject specification.

.....

This specification has been declared "CANCELLED" by the Aerospace Materials Division, SAE, as of 10-1-82. By this action, subject specification number and title will be deleted from the active specification index of Aerospace Material Specifications.

This specification is under the jurisdiction of AMS Committee "F".

SAE Technical Board rules provide that "All technical reports, including standards approved and practices recommended, are advisory only. Their use by anyone engaged in industry or trade or their use by governmental agencies is entirely voluntary. There is no agreement to adhere to any SAE standard or recommended practice, and no commitment to conform to or be guided by any technical report. In formulating and approving technical reports, the Board and its Committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against liability for infringement of patents."

AEROSPACE MATERIAL SPECIFICATION

Society of Automotive Engineers, Inc.
TWO PENNSYLVANIA PLAZA NEW YORK N Y 1000

AMS 5722C

Superseding AMS 5722B

Issued 7-1-48
Revised 11-1-68

STEEL BARS, FORGINGS, AND RINGS, CORROSION AND HEAT RESISTANT

19.5Cr - 9.5Ni - 1.4Mo - 1.4W - 0.42(Cb + Ta) - 0.22Ti

1. **ACKNOWLEDGMENT:** A vendor shall mention this specification number and its revision letter in all quotations and when acknowledging purchase orders.
2. **FORM:** Bars, forgings, flash welded rings, and stock for forgings or flash welded rings.
3. **APPLICATION:** Parts and assemblies, such as bolts, dowels, fittings, turbine rotor wheels and discs, and turbine nozzle assemblies, requiring high strength up to 1200 F (649 C).
4. **COMPOSITION:**

	min	max
Carbon	0.28	0.35
Manganese	0.75	1.50
Silicon	0.30	0.80
Phosphorus	—	0.040
Sulfur	—	0.030
Chromium	18.00	21.00
Nickel	8.00	11.00
Molybdenum	1.00	1.75
Tungsten	1.00	1.75
Columbium + Tantalum	0.25	0.60
Titanium	0.10	0.35
Copper	—	0.50

- 4.1 **Check Analysis:** Composition variations shall meet the requirements of the latest issue of AMS 2248.
5. **CONDITION:**
 - 5.1 **Bars, Forgings, and Stock for Flash Welded Rings:** Hot worked, with final working done at a temperature not lower than 1400 F (760 C) and stress relieved at not lower than 1200 F (649 C) for not less than 4 hours.
 - 5.2 **Flash Welded Rings:** Stress relieved at not lower than 1200 F (649 C) for not less than 4 hours.
 - 5.2.1 Flash welded rings shall not be supplied unless specified on purchaser's part drawing. When supplied, they shall be manufactured in accordance with the latest issue of AMS 7490, unless otherwise specified.
 - 5.3 **Forging Stock:** As ordered by the forging manufacturer.
6. **TECHNICAL REQUIREMENTS:** When ASTM methods are specified for determining conformance to the following requirements, tests shall be conducted in accordance with the issue of the ASTM method listed in the latest issue of AMS 2350.
 - 6.1 **Bars and Flash Welded Rings:** Specimens taken from bars and from parent metal of flash welded rings shall conform to the requirements of 6.1.1 and 6.1.2 and shall be capable of meeting the requirements of 6.1.3.

6.1.1 Tensile Properties:

Nominal Diameter or Distance Between Parallel Sides (Bars) or Radial Thickness (Flash Welded Rings) Ø Inches	Tensile Strength psi, min	Yield Strength at 0.2% Offset or at Extension Indicated (E = 29,000,000)		Elongation % in 2 in. or 4D, min	Reduction of Area, %, min (Round Specimens)
		psi, min	Extension Under Load in. in 2 in.		
Up to 2.625, incl	100,000	70,000	0.0088	20	40
Over 2.625 to 4.000, incl	100,000	60,000	0.0081	20	40
Over 4.000 to 5.000, incl	100,000	50,000	0.0074	20	40
Over 5.000	95,000	45,000	0.0071	20	40

6.1.2 Hardness:

Nominal Diameter or Distance Between Parallel Sides (Bars) or Radial Thickness (Flash Welded Rings) Inches	Hardness, Brinell
Up to 4.000, incl	228 - 285
Over 4.000 to 5.000, incl	217 - 277
Over 5.000	207 - 269

6.1.3 Stress-Rupture Test at 1200 F (648.9 C): A tensile test specimen, maintained at 1200 F $\pm$ 3 (648.9 C $\pm$ 1.7) while an axial stress of 40,000 psi is applied continuously, shall not rupture in less than 100 hours. The test shall be continued to rupture. The elongation after rupture, measured at room temperature, shall be not less than 15% in 4D. Test shall be conducted in accordance with ASTM E139.

6.1.3.1 The test of 6.1.3 may be conducted at a stress higher than 40,000 psi but stress shall not be changed while test is in process, unless otherwise specified or allowed. Time to rupture and elongation requirements shall be as specified in 6.1.3.

6.1.3.2 When permitted by purchaser, the test of 6.1.3 may be conducted using incremental loading. In such case, a stress of 40,000 psi shall be used to rupture or for 100 hr, whichever occurs first.
Ø After the 100 hr and at intervals of 8 - 16 hr, preferably 8 - 10 hr, thereafter, the stress shall be increased in increments of 5000 psi. Time to rupture and elongation requirements shall be as specified in 6.1.3.

6.2 Forgings: Shall conform to the requirements of 6.2.1 and shall be capable of meeting the requirements of 6.2.2.

6.2.1 Hardness: Brinell 207 - 277 or equivalent.

6.2.2 Stress-Rupture Test at 1200 F (648.9 C): A tensile test specimen, maintained at 1200 F $\pm$ 3 (648.9 C $\pm$ 1.7) while an axial stress of 31,000 psi when axis of specimen is across the forging flow lines, or 40,000 psi when axis of specimen is approximately parallel to the forging flow lines, is applied continuously, shall not rupture in less than 100 hours. The test shall be continued to rupture. The elongation after rupture, measured at room temperature, shall be not less than 12% in 4D. Test shall be conducted in accordance with ASTM E139.

- 6.2.2.1 The test of 6.2.2 may be conducted at a stress higher than 31,000 psi when axis of specimen is across the forging flow lines, or higher than 40,000 psi when axis of specimen is parallel to forging flow lines, but stress shall not be changed while test is in process. Time to rupture and elongation requirements shall be as specified in 6.2.2.
 - 6.2.2.2 When permitted by purchaser, the test of 6.2.2 may be conducted using incremental loading. In such case, a stress of 31,000 psi when axis of specimen is across the forging flow lines, or 40,000 psi when axis of specimen is approximately parallel to the forging flow lines, shall be used to rupture or for 100 hr, whichever occurs first. After the 100 hr and at intervals of 8 - 16 hr, preferably 8 - 10 hr, thereafter, the stress shall be increased in increments of 5000 psi. Time to rupture and elongation requirements shall be as specified in 6.2.2.
7. QUALITY: Material shall be uniform in quality and condition, clean, sound, and free from foreign materials and from internal and external imperfections detrimental to fabrication or to performance of parts.
8. TOLERANCES: Unless otherwise specified, tolerances for bars shall conform to all applicable requirements of the latest issue of AMS 2241. Tolerances for sizes not covered by AMS 2241 shall be as agreed upon by purchaser and vendor.
9. REPORTS:
 - 9.1 Unless otherwise specified, the vendor of the product shall furnish with each shipment three copies of a report of the results of tests for chemical composition of each heat in the shipment and the results of tests on each size from each heat to determine conformance to the technical requirements of this specification. This report shall include the purchase order number, heat number, material specification number and its revision letter, size, and quantity from each heat. If forgings are supplied, the part number and size of stock used to make the forgings shall also be included.
 - 9.2 Unless otherwise specified, the vendor of finished or semi-finished parts shall furnish with each shipment three copies of a report showing the purchase order number, material specification number and its revision letter, contractor or other direct supplier of material, part number, and quantity. When material for making parts is produced or purchased by the parts vendor, that vendor shall inspect each lot of material to determine conformance to the requirements of this specification, and shall include in the report a statement that the material conforms, or shall include copies of laboratory reports showing the results of tests to determine conformance.
10. IDENTIFICATION: Unless otherwise specified, the product shall be identified as follows:
 - 10.1 Bars:
 - 10.1.1 Each straight bar 0.500 in. and over in diameter or least width of flat surface shall be marked in a row of characters recurring at intervals not greater than 3 ft with AMS 5722C, heat number, and manufacturer's identification. The characters shall be of such size as to be clearly legible, shall be applied using a suitable marking fluid, and shall be capable of being removed in hot alkaline cleaning solution without rubbing. The markings shall have no deleterious effect on the material and shall be sufficiently stable to withstand normal handling.
 - 10.1.2 Straight bars less than 0.500 in. in OD or least width of flat surface shall be securely bundled and identified by a metal or plastic tag embossed with the purchase order number, AMS 5722C, heat number, nominal size, and manufacturer's identification and attached to each bundle or shall be boxed and the box marked with the same information.
 - 10.2 Forgings: Shall be identified in accordance with the latest issue of AMS 2808.
