

AEROSPACE MATERIAL SPECIFICATION

Society of Automotive Engineers, Inc.
TWO PENNSYLVANIA PLAZA, NEW YORK, N. Y. 1000

AMS 5754F

Superseding AMS 5754E

Issued 5-1-54

Revised 11-1-68

ALLOY BARS, FORGINGS, AND RINGS, CORROSION AND HEAT RESISTANT

Nickel Base - 22Cr - 1.5Co - 9.0Mo - 0.60W - 18.5Fe

1. **ACKNOWLEDGMENT:** A vendor shall mention this specification number and its revision letter in all quotations and when acknowledging purchase orders.
2. **FORM:** Bars, forgings, flash welded rings, and stock for forging or flash welded rings.
3. **APPLICATION:** Primarily for parts and assemblies, such as turbine rotors, shafts, flanges, buckets, and bolts, requiring oxidation resistance up to 2200 F (1204 C) and relatively high strength above 1500 F (816 C).
4. **COMPOSITION:**

	min	max
Carbon	0.05	0.15
Manganese	--	1.00
Silicon	--	1.00
Phosphorus	--	0.040
Sulfur	--	0.030
Chromium	20.50	23.00
Cobalt	0.50	2.50
Molybdenum	8.00	10.00
Tungsten	0.20	1.00
Iron	17.00	20.00
Boron	--	0.010
Nickel	remainder	

- 4.1 **Check Analysis:** Composition variations shall meet the requirements of the latest issue of AMS 2269.

5. **CONDITION:**

- 5.1 **Bars, Forgings, and Flash Welded Rings:** Solution heat treated.
 - 5.1.1 Bars less than 0.75 in. in diameter or distance between parallel sides shall be descaled.
 - 5.1.2 Round bars 0.75 in. and over in diameter shall be ground.
 - 5.1.3 Bars other than round 0.75 in. and over in distance between parallel sides shall be descaled, unless otherwise specified.
 - 5.1.4 Flash welded rings shall not be supplied unless specified or permitted on purchaser's part drawing. When supplied, they shall be manufactured in accordance with the latest issue of AMS 7490, unless otherwise specified.
- 5.2 **Stock for Forging or Flash Welded Rings:** As ordered by the forging or flash welded ring manufacturer.

SAE Technical Board rules provide that: "All technical reports, including standards, specifications, and practices recommended, are advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. There is no agreement to adhere to any SAE standard or recommended practice, and no commitment to conform to or be guided by any technical report. In formulating and approving technical reports, the Board and its committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against infringement of patents."

6. TECHNICAL REQUIREMENTS:**6.1 Bars, Forgings, and Flash Welded Rings:**

6.1.1 Heat Treatment: The product shall be solution heat treated by heating to $2150\text{ F} \pm 25$ ($1176.7\text{ C} \pm 14$), holding at heat for not less than 20 min., and either quenching in water or rapid air cooling.

6.1.2 Hardness:

6.1.2.1 Bars: Shall have hardness not higher than Brinell 241 or equivalent when taken approximately mid-way between surface and center.

6.1.2.2 Forgings and Flash Welded Rings: Shall have hardness not higher than Brinell 241 or equivalent.

6.1.3 Stress-Rupture Test at 1500 F (815.6 C): Specimens taken from bars and forgings and from parent metal of flash welded rings shall be capable of meeting the following requirements:

6.1.3.1 A tensile test specimen, maintained at $1500\text{ F} \pm 5$ ($815.6\text{ C} \pm 2.8$) while an axial stress of 15,000 psi is applied continuously, shall not rupture in less than 24 hours. The test shall be continued to rupture without change of stress. Elongation after rupture, measured at room temperature shall be not less than 10% in 4D. Tests shall be conducted in accordance with the issue of ASTM E139 specified in the latest issue of AMS 2350.

6.1.3.1.1 The test of 6.1.3.1 may be conducted at a stress higher than 15,000 psi but stress shall not be changed while test is in process. Time to rupture and elongation requirements shall be as specified in 6.1.3.1.

6.1.3.1.2 When permitted by purchaser, the test of 6.1.3.1 may be conducted using incremental loading. In such case, a stress of 15,000 psi shall be used to rupture or for 48 hr, whichever occurs first. After the 48 hr and at intervals of 8 - 16 hr, preferably 8 - 10 hr, thereafter, the stress shall be increased in increments of 5000 psi. Time to rupture and elongation requirements shall be as specified in 6.1.3.1.

6.2 Forging Stock: When a sample of stock is forged to a test coupon and heat treated as in 6.1.1, specimens taken from the heat treated coupon shall conform to the requirements of 6.1.2 and 6.1.3. If specimens taken from the stock after heat treatment as in 6.1.1 conform to the requirements of 6.1.2 and 6.1.3, the test shall be accepted as equivalent to tests of the forged coupon.

7. QUALITY: Material shall be uniform in quality and condition, clean, sound, and free from foreign materials and from internal and external imperfections detrimental to fabrication or to performance of parts.

8. TOLERANCES: Unless otherwise agreed upon by purchaser and vendor, tolerances for bars shall conform to all applicable requirements of the latest issue of AMS 2261.

9. REPORTS:

9.1 Unless otherwise specified, the vendor of the product shall furnish with each shipment three copies of a report of the results of tests for chemical composition of each heat in the shipment. This report shall include the purchase order number, heat number, material specification number and its revision letter, size, and quantity from each heat. If forgings are supplied, the part number and size of stock used to make the forgings shall also be included.

9.2 Unless otherwise specified, the vendor of finished or semi-finished parts shall furnish with each shipment three copies of a report showing the purchase order number, material specification number and its revision letter, contractor or other direct supplier of material, part number, and quantity. When material for making parts is produced or purchased by the parts vendor, that vendor shall inspect each lot of material to determine conformance to the requirements of this specification, and shall include in the report a statement that the material conforms, or shall include copies of laboratory reports showing the results of tests to determine conformance.
