

# AEROSPACE MATERIAL SPECIFICATION

**AMS6948™****REV. C**Issued 2011-07  
Revised 2024-12

Superseding AMS6948B

Titanium Alloy Bars, Wire, Forgings, Rings, and Drawn Shapes,  
4Al - 2.5V -1.5 Fe,  
Annealed

(Composition similar to UNS R54250)

## RATIONALE

AMS6948C results from a Five-Year Review and update of this specification with changes to update wording to prohibit unauthorized exceptions (see 3.5.1.1.3 and 8.5), relocate Definitions (see 2.3), update Applicable Documents (see Section 2), correct metric reference value for Solution Heat Treatment (see 3.4.1), and update Ordering Information (see 8.6).

### 1. SCOPE

#### 1.1 Form

This specification covers a titanium alloy in the form of bars, wire, forgings, flash-welded rings, drawn shapes 5.000 inches (127.00 mm) and under, and stock for forging or flash-welded rings of any size (see 8.6).

#### 1.2 Application

These products have been used typically for parts requiring a combination of moderate strength and good ductility with a maximum service temperature up to 750 °F (400 °C), depending on time at temperature where the product is to be used in the annealed condition, but usage is not limited to such applications.

### 2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.

## 2.3 Definitions

Terms used in AMS are defined in AS7766.

2.3.1 Terminology relating to titanium microstructures is presented in AS1814.

## 3. TECHNICAL REQUIREMENTS

### 3.1 Composition

Shall conform to the percentages by weight shown in Table 1; carbon shall be determined in accordance with ASTM E1941, hydrogen in accordance with ASTM E1447, oxygen and nitrogen in accordance with ASTM E1409, and other elements in accordance with ASTM E539, ASTM E2371, or ASTM E2994. Other analytical methods may be used if acceptable to the purchaser.

**Table 1 - Composition**

| Element                           | Min       | Max             |
|-----------------------------------|-----------|-----------------|
| Aluminum                          | 3.5       | 4.5             |
| Vanadium                          | 2.0       | 3.0             |
| Iron                              | 1.2       | 1.8             |
| Oxygen                            | 0.20      | 0.30            |
| Carbon                            | --        | 0.08 (800 ppm)  |
| Nitrogen                          | --        | 0.03 (300 ppm)  |
| Hydrogen                          | --        | 0.015 (150 ppm) |
| Other Elements, each (see 3.1.1)  | --        | 0.1             |
| Other Elements, total (see 3.1.1) | --        | 0.3             |
| Titanium                          | remainder |                 |

3.1.1 Determination not required for routine acceptance.

3.1.2 Check Analysis

Composition variations shall meet the applicable requirements of AMS2249.

### 3.2 Melting Practice

Alloy shall be multiple melted. The first melt shall be made by vacuum consumable electrode, nonconsumable electrode, electron beam cold hearth, or plasma arc cold hearth melting practice. The subsequent melt or melts shall be made using vacuum arc remelting (VAR) practice. Alloy additions are not permitted in the final melt cycle.

3.2.1 The atmosphere for nonconsumable electrode melting shall be vacuum or shall be argon and/or helium at an absolute pressure not higher than 1000 mm of mercury.

3.2.2 The electrode tip for nonconsumable electrode melting shall be water-cooled copper.

### 3.3 Condition

The product shall be supplied in the following condition:

#### 3.3.1 Bars

Hot finished with or without subsequent cold reduction, annealed, and descaled. Unless prohibited by the purchaser, bars may be solution heat treated before annealing. The product shall be processed to the final thickness/diameter by metallurgical working operations prior to any dimensional sizing or surface finishing operations (see 8.6). Bar shall not be cut from plate.

#### 3.3.2 Wire

Hot finished with or without subsequent cold reduction, annealed, and descaled.

#### 3.3.3 Forgings and Flash-Welded Rings

Annealed and descaled. Unless prohibited by the purchaser, product may be solution heat treated before annealing.

3.3.3.1 Flash-welded rings shall not be supplied unless specified or permitted on the purchaser's part drawing. When supplied, rings shall be manufactured in accordance with AMS7498.

#### 3.3.4 Drawn Shapes

Drawn, annealed, and descaled. Unless prohibited by the purchaser, drawn shapes may be solution heat treated before annealing.

### 3.3.5 Stock for Forging or Flash-Welded Rings

As ordered by the forging or flash-welded ring manufacturer.

### 3.4 Heat Treatment

Bars, wire, forgings, rings, and drawn shapes shall be heat treated as follows; pyrometry shall be in accordance with AMS2750:

#### 3.4.1 Solution Heat Treatment

When solution heat treatment is used, heat to a temperature within the range 50 to 200 °F (28 to 111 °C) below the beta transus, hold at the selected temperature within  $\pm 25$  °F ( $\pm 14$  °C) for a time commensurate with section thickness and the heating equipment and procedure used, and cool at a rate equivalent to an air cool or faster.

#### 3.4.2 Annealing

Heat to a temperature within the range 1250 to 1400 °F (677 to 760 °C), hold at the selected temperature within  $\pm 25$  °F ( $\pm 14$  °C) for not less than 1 hour, and cool as required.

### 3.5 Properties

The product shall conform to the following requirements and shall also meet the requirements of 3.5.1.1 and 3.5.1.2 after being heated to any temperature up to 1200 °F (649 °C), held at heat for 20 minutes  $\pm$  3 minutes, cooled in air, and descaled:

#### 3.5.1 Bars, Wire, Forgings, and Flash-Welded Rings

Product, 5.000 inches (127.00 mm) and under in nominal diameter or least distance between parallel sides, shall have the following properties:

##### 3.5.1.1 Tensile Properties

Shall be as specified in Table 2, determined in the longitudinal direction in accordance with ASTM E8/E8M on specimens as in 4.3.1.2 with the rate of strain set at 0.005 in/in/min (0.005 mm/mm/min) and maintained within a tolerance of  $\pm 0.002$  in/in/min ( $\pm 0.002$  mm/mm/min) through the 0.2% offset yield strain.

**Table 2A - Minimum tensile properties, inch/pound units**

| Nominal Diameter<br>or Least Distance<br>Between Parallel Sides<br>Inches | Tensile<br>Strength<br>ksi | Yield Strength<br>at 0.2% Offset<br>ksi | Elongation in<br>2 Inches or 4D<br>% | Reduction<br>of Area<br>% |
|---------------------------------------------------------------------------|----------------------------|-----------------------------------------|--------------------------------------|---------------------------|
| Less than 0.500                                                           | 145                        | 135                                     | 15                                   | 30                        |
| 0.500 to less than 1.000                                                  | 145                        | 125                                     | 15                                   | 30                        |
| 1.000 to less than 2.000                                                  | 139                        | 125                                     | 15                                   | 30                        |
| 2.000 to 5.000, incl                                                      | 135                        | 125                                     | 15                                   | 30                        |

**Table 2B - Minimum tensile properties, SI units**

|--------------------------------------------------------------------------------|----------------------------|-----------------------------------------|-------------------------------------|---------------------------|
| Less than 12.70                                                                | 1000                       | 931                                     | 15                                  | 30                        |
| 12.70 to less than 25.40                                                       | 1000                       | 862                                     | 15                                  | 30                        |
| 25.40 to less than 50.80                                                       | 958                        | 862                                     | 15                                  | 30                        |
| 50.80 to 127.00, incl                                                          | 931                        | 862                                     | 15                                  | 30                        |

- 3.5.1.1.1 Specimens for the longitudinal requirements in Table 2 shall be taken with the axis of the specimen approximately parallel to the grain flow for bars and wire and shall be taken in the circumferential direction from flash-welded rings.
- 3.5.1.1.2 Yield strength and reduction of area requirements do not apply to wire and drawn shapes with maximum section thickness under 0.125 inch (3.18 mm) in nominal diameter or least distance between parallel sides.
- 3.5.1.1.3 Mechanical property requirements for product outside the size range covered by 1.1 shall be agreed upon between the purchaser and producer and reported per 4.4.4 (see 8.6).

#### 3.5.1.2 Microstructure

Shall be that structure resulting from processing within the alpha-beta phase field. Microstructure shall conform to 3.5.1.2.1 or 3.5.1.2.2 or 3.5.1.2.3 (see 2.3.1).

- 3.5.1.2.1 Equiaxed and/or elongated primary alpha in a transformed beta matrix with no continuous network of alpha at prior beta grain boundaries.
- 3.5.1.2.2 Essentially complete field of equiaxed and/or elongated alpha with no continuous network of alpha at prior beta grain boundaries.
- 3.5.1.2.3 Partially broken and distorted grain boundary alpha with plate-like alpha.
- 3.5.1.2.4 A microstructure showing a continuous network of alpha in prior beta grain boundaries is not acceptable.

#### 3.5.1.3 Surface Contamination

Except as permitted by 3.5.1.3.1 and 3.5.1.3.2, the product shall be free of any oxygen-rich layer (see 8.2), such as alpha case, or other surface contamination, determined by microscopic examination at not lower than 100X magnification or other method acceptable to the purchaser.

- 3.5.1.3.1 An oxygen-rich layer not greater than 0.001 inch (0.025 mm) in depth will be permitted on bars other than round and drawn shapes.
- 3.5.1.3.2 When permitted by the purchaser, forgings and flash-welded rings to be machined all over may have an oxygen-rich layer provided such layer is removable within the machining allowance on the forging or flash-welded ring.

#### 3.5.2 Forging Stock

When a sample of stock is forged to a test coupon having a degree of mechanical working not greater than the forging and heat treated as in 3.4, specimens taken from the heat-treated coupon shall conform to the requirements of 3.5.1.1. If specimens taken from the stock after heat treatment as in 3.4 conform to the requirements of 3.5.1.1, the tests shall be accepted as equivalent to tests of a forged coupon.

#### 3.5.3 Stock for Flash-Welded Rings

A sample of stock heat treated as in 3.4 shall conform to the requirements of 3.5.1.1.

### 3.6 Quality

The product, as received by the purchaser, shall be uniform in quality and condition, sound, and free from foreign materials and from imperfections detrimental to usage of the product.

- 3.6.1 Grain flow of die forgings, except in areas that contain flash-line end grain, shall follow the general contour of the forgings showing no evidence of reentrant grain flow.

### 3.7 Tolerances

Bars and wire shall conform to all applicable requirements of AMS2241.

3.8 Production, distribution, and procurement of metal stock shall comply with AS6279.

### 3.9 Exceptions

Any exceptions shall be authorized by the purchaser and reported as in 4.4.4.

## 4. QUALITY ASSURANCE PROVISIONS

### 4.1 Responsibility for Inspection

The producer of the product shall supply all samples for the producer's test and shall be responsible for the performance of all required tests. The purchaser reserves the right to sample and to perform any confirmatory testing deemed necessary to ensure that the product conforms to specified requirements.

### 4.2 Classification of Tests

#### 4.2.1 Acceptance Tests

The following requirements are acceptance tests and shall be performed on each heat or lot as applicable:

4.2.1.1 Composition (see 3.1) of each heat and hydrogen content of each lot.

4.2.1.2 Tensile properties (see 3.5.1.1), microstructure (see 3.5.1.2), and surface contamination (see 3.5.1.3) of each lot of bars, wire, forgings, flash-welded rings, and drawn shapes, as received.

4.2.1.3 Tolerances (see 3.7) of bars and wire.

#### 4.2.2 Periodic Tests

The following requirements are periodic tests and shall be performed at a frequency selected by the producer unless frequency of testing is specified by the purchaser:

4.2.2.1 Tensile properties (see 3.5.1.1) of bars, wire, forgings, flash-welded rings, and drawn shapes after reheating as in 3.5.

4.2.2.2 Ability of forging stock (see 3.5.2) and stock for flash-welded rings (see 3.5.3) to develop required properties.

4.2.2.3 Grain flow of die forgings (see 3.6.1).

### 4.3 Sampling and Testing

Shall be in accordance with AMS2368 and the following; a lot shall be all product of the same nominal size from the same heat, processed at the same time, and solution heat treated and annealed as a heat-treat batch:

#### 4.3.1 For Acceptance Tests

##### 4.3.1.1 Composition

One sample from each heat, except that for hydrogen determinations one sample from each lot obtained after thermal and chemical processing is completed.
