

 AEROSPACE RECOMMENDED PRACTICE	ARP4156		REV. B
	Issued	1989-10	
	Revised	2006-11	
Superseding AS4156A			
Color-Coded Incandescent Flange Base T-1 and T-1 3/4 Lamps for Voltage Identification			

RATIONALE

The driving force for the change is to update the document according to industry updates, mostly terminology. The changes would make the document current.

FOREWORD

There are a number of incandescent flange base miniature lamps that have identical appearance and produce approximately the same light output, but are designed at different voltages, primarily, 5.0, 14.0, 28.0, and 32.0 volts. In several applications, a 5.0 volt lamp installed in place of a 28.0 volt lamp can cause failures of electronic components due to its lower impedance and, consequently, higher current. Because these lamps are identical in appearance and so small as to make identification by markings almost impossible, this document is intended to provide, a means of identification of voltage differences.

1. SCOPE

This document defines the method for voltage identification by the use of color-coded insulators at the base of the lamps. Table 1 shows the design volts and corresponding insulator colors.

The part numbers shown are for example purposes only, as an option.

Insulator colors are to be easily distinguishable as green, yellow, red, and white. Additional colors may be added by a revision process as required.

2. REFERENCES

There are no referenced publications specified herein.

3. RECOMMENDATIONS

For aerospace applications, lamps should be ordered by the part numbers as shown in the examples in Table 1 so that replacement lamps can be easily identified as to voltage.

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.
