Vibration (random): Connectors shall be subjected to the test specified in method 2005 of MIL-STD-1344. The following details shall apply:

- Test condition V. Using the vibration envelope shown on figure 2. (Derived from zone 2 outlined in Aerospace Information Report AIR 1557.)
- Vibration to be conducted at standard test conditions.
- Duration shall be 8 hours in the longitudinal direction and 8 hours in a perpendicular direction for a total of 16 hours.

Shock (high-impact): Wired and mated connectors shall be subjected to the test specified in MIL-S-901, grade A with the following modifications and additions:

- Connectors shall be coupled together by normal coupling means. All contacts shall be wired in a series circuit with 100 milliamperes maximum current flow through the series circuit during high-impact shock. Connectors shall be monitored for any discontinuities. A detector capable of detecting all discontinuities in excess of 1 microsecond shall be used.
- Mounting fixture shall be in accordance with MIL-S-901, light weight.
- The cable or wire bundle shall be supported on a stationary frame in such a manner to provide a free flexing cable length between frame and fixture of not less than 36 inches (914.4 mm).
- Test condition A. The plug shall be terminated with at least 80 percent of wired contacts. The wire bundle shall be provided with straight, open frame, strain relief accessory hardware.
