

SURFACE VEHICLE STANDARD

J967™

DEC2015

Issued 1966-08
Revised 1988-09
Cancelled 2015-12

Superseded by ISO 4133

Calibration Fluid for Diesel Injection Equipment

RATIONALE

SAE J967 has been cancelled because the content of this standard is fully covered by ISO 4133. Therefore, to eliminate such redundancy and confusion in coordinating the standards between ISO and SAE, this document is declared cancelled and superseded by ISO 4133.

CANCELLATION NOTICE

This Technical Report has been declared "CANCELLED" as of September 2015 and has been superseded by ISO 4133. By the action, this document will remain listed in the respective index, if applicable. Cancelled Technical Reports are available from SAE.

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or cancelled. SAE invites your written comments and suggestions.

Foreword—This Document has not changed other than to put it into the new SAE Technical Standards Board Format. References were added as Section 2. All other section numbers have changed accordingly.

1. Scope—This SAE Standard defines the requirements of a calibration fluid recommended for flow bench testing, calibration, and flushing of fuel injection equipment, in production facilities, in laboratories, and in service establishments.

2. References

2.1 Applicable Publications—The following publication forms a part of the specification to the extent specified herein.

2.1.1 ASTM PUBLICATIONS—Available from ASTM, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959.

ASTM D 56—Test Method for Flash Point by Tag Closed Tester

ASTM D 86—Method for Distillation of Petroleum Products

ASTM D 129—Test Method for Sulfur in Petroleum Products (General Bomb Method)

ASTMD130—Method for Detection of Copper Corrosion from Petroleum Products by the Copper Strip Tarnish Test

ASTMD445—Test Method for Kinematic Viscosity of Transparent and Opaque Liquids (and the Calculation of Dynamic Viscosity)

ASTM D 665A—Test Method for Rust-Preventing Characteristics of Inhibited Mineral Oil in the Presence of Water

ASTM D 892—Test Method for Foaming Characteristics of Lubricating Oils

ASTMD1298—Test Method for Density, Relative Density (Specific Gravity), or API Gravity of Crude Petroleum and Liquid Petroleum Products by Hydrometer Method

ASTM D 1500—Test Method for ASTM Color of Petroleum Products (ASTM Color Scale)

ASTM D 1748—Test Method for Rust Protection by Metal Preservatives in the Humidity Cabinet

ASTM D 2140—Test Method for Carbon-Type Composition of Insulating Oils of Petroleum Origin

ASTM D 2273—Test Method for Trace Sediment in Lubricating Oils

ASTM D 2500—Test Method for Cloud Point of Petroleum Oils

2.1.2 ISO PUBLICATIONS—Available from ANSI, 25 West 43rd Street, New York, NY 10036-8002.

ISO 2049—Petroleum products—Determination of colour

ISO 2160—Petroleum products—Corrosiveness to copper—Copper strip test

ISO 2719—Petroleum products and lubricants—Determination of flash point—Pensky-Martens closed cup method

ISO 3015—Petroleum products—Determination of cloud point

ISO 3104—Petroleum products—Transparent and opaque liquids—Determination of kinematic viscosity and calculation of dynamic viscosity

ISO 3405—Petroleum products—Determination of distillation characteristics

ISO 3675—Crude petroleum and liquid petroleum products—Laboratory determination of density or relative density—Hydrometer method

ISO 4113—Road vehicles—Calibration fluid for diesel injection equipment

2.1.3 IP PUBLICATION—Available from ILI, 610 Winters Avenue, Paramus, NJ 07652.

IP 306/82

2.1.4 FSTM PUBLICATION—Available from Global Engineering, 7730 Carondelet Avenue, Suite 407, Clayton, Missouri 63105

FSTM 5322.1

3. **International Standard**—This SAE Standard meets the specifications for ISO 4113 calibration fluid for diesel injection equipment.

4. **Property Requirements**—The calibration fluid shall be formulated from refined and deodorized fuel stocks. It shall meet the specifications shown in Table 1. Anti-wear additives may be included.

The calibration fluid shall not contain components in such a concentration that it could irritate the normal skin.

The calibration fluid shall have good storage and thermal stability, and shall be such that without cleaning of the equipment after calibration, proper functioning of the equipment is ensured after being stored one year in normal conditions.

5. **Certification**—A supplier of this calibration fluid must supply, with each container or bulk shipment, certification that the fluid meets this standard, state the specific revision, the date of manufacture, and indicate the presence of anti-wear additives. The presence of anti-wear additives must also be included on the shipping container.
