TOLERANCES, METRIC Corrosion and Heat Resistant Steel, Iron Alloy, Titanium, and Titanium Alloy Sheet, Strip, and Plate

1. **SCOPE:** This specification covers established manufacturing tolerances applicable to sheet, strip, and plate of corrosion and heat resistant steels, iron alloys, titanium, and titanium alloys ordered to metric dimensions. These tolerances apply to all conditions, unless otherwise noted. The term "excl" is used to apply only to the higher figure of a specified range.
 - 1.1 These tables are based upon logical metric values and preferred metric sizes.
 - 1.2 Throughout this specification the term "metric" is intended to refer to the SI system.
2. **THICKNESS:** Thickness for sheet and strip is measured at any place on widths less than 25 mm, at any place 10 mm and over from an edge on widths 25 mm and over, and for plate at least 10 mm but not more than 75 mm from an edge.
 - 2.1 **Sheet:** Table I includes crown tolerances.

2.3 Plate: Minus tolerance shall be 0.25 mm for all widths for all thicknesses up to 250 mm, incl, in all alloys; plus tolerances shall be as in Table III. For circles, the plus thickness tolerances in Table III apply to the diameter of the circle corresponding to the width ranges shown. For plates of irregular shape, the plus thickness tolerances apply to the greatest width corresponding to the width ranges shown.
